GLOBAL MARKETS

- U.S. stocks fell on Wednesday as investors digested a statement from the Federal Reserve, which left interest rates steady and said inflation had "moved close" to its target, while the dollar climbed late against a basket of currencies.

GLOBAL ECONOMIES

- New Zealand's unemployment rate dropped to a nine-year low of 4.4. percent in the first quarter, official figures showed on Wednesday, but stubbornly low wage growth left the central bank all-but-certain to signal it would keep rates on hold for now.
- Growth in China's manufacturing sector unexpectedly picked up in April as output quickened slightly, a private survey showed on Wednesday, though a decline in export orders reinforced risks to the outlook as firms continued to shed staff while inventories also rose.
- Euro zone economic growth slowed as expected at the start of 2018, although economists said temporary factors were partly behind the weakness and that the economy should continue to expand strongly this year.
- British construction activity rebounded faster than expected last month after succumbing to snow in March, but the upturn did little to alter the view of investors that the Bank of England will leave interest rates unchanged next week.
- Information received since the Federal Open Market Committee met in March indicates that the labor market has continued to strengthen and that economic activity has been rising at a moderate rate.
- Bank of Canada Governor Stephen Poloz said on Tuesday that the view of the Canadian economy is quite good despite record levels of household debt, and he was confident the central bank can manage the risk of that debt even as interest rates rise.

GLOBAL MARKETS & ECONOMIES

GLOBAL MARKETS

U.S. & Global Markets – U.S. stocks fell on Wednesday as investors digested a statement from the Federal Reserve, which left interest rates steady and said inflation had "moved close" to its target, while the dollar climbed late against a basket of currencies.

Stocks, which initially gained after the Fed statement, reversed course as potential U.S. restrictions on Chinese telecommunications companies reinforced investor concerns about trade relations between the United States and China.

In its statement, the Fed expressed confidence that a recent rise in inflation to near the U.S. central bank's target would be sustained, leaving it on track to raise borrowing costs in June. It also said inflation "on a 12-month basis is expected to run near the Committee's symmetric 2 percent objective over the medium term."

"There wasn't any particular news to get it going other than the Fed staying the course, and that contributed to the slide in stock prices," said Robert Pavlik, chief investment strategist, senior portfolio manager at SlateStone Wealth LLC in New York.

The Fed raised rates in March and currently forecasts another two increases this year. Ahead of the statement, some investors were nervous it might sound more hawkish on policy tightening after recent concerns about rising inflation.

The U.S. dollar fell from 2018 highs set earlier in the day after the Fed statement raised concerns that monetary accommodation will stay loose even as the central bank hikes rates. But the greenback later reversed course to trade higher.

The dollar index rose 0.3 percent, with the euro up 0.02 percent to \$1.1952.

On Wall Street, the Dow Jones Industrial Average fell 174.07 points, or 0.72 percent, to 23,924.98, the S&P 500 lost 19.13 points, or 0.72 percent, to 2,635.67 and the Nasdaq Composite dropped 29.81 points, or 0.42 percent, to 7,100.90.

U.S. President Donald Trump is considering issuing an executive order restricting certain Chinese companies from selling telecommunications equipment in the United States.

Trade relations between the United States and China have already been strained as Trump has weighed imposing tariffs on up to \$150 billion of Chinese imports. A Trump administration delegation is scheduled to visit Beijing on Thursday and Friday for talks with top Chinese officials.

"It's hard to see investors willing to take increasing risk ahead of a couple more weeks of trade discussions and negotiations to come," said Matthew Miskin, market strategist at John Hancock Investments in Boston.

Forecast-beating results from the world's biggest company, Apple Inc, lifted tech shares, limiting losses in the S&P 500. Apple shares were up 4.4 percent.

Apple beat profit and revenue expectations in the first quarter, thanks to robust iPhone sales, and it announced a \$100 billion share buy-back.

MSCI's gauge of stocks across the globe shed 0.39 percent.

U.S. Treasury yields for most maturities fell as a quarterly refunding program that aims to finance the country's massive fiscal deficit came in short of expectations.

Treasury yields had risen overnight in the run-up to the refunding announcement.

U.S. 10-year yields were at 2.970 percent, down from 2.976 percent late on Tuesday. [\(Source Reuters – @her1en\)](#)

GLOBAL ECONOMIES

New Zealand – New Zealand's unemployment rate dropped to a nine-year low of 4.4 percent in the first quarter, official figures showed on Wednesday, but stubbornly low wage growth left the central bank all-but-certain to signal it would keep rates on hold for now.

The jobless rate hit its lowest since the fourth quarter of 2008 as employment rose 0.6 percent, Statistics New Zealand said, beating analysts' expectations of 0.4 percent growth.

The participation rate was 70.8 percent, largely driven by more women entering the workforce.

Statistics New Zealand said female employment reached its highest-ever rate at 62.6 percent.

But the strong figures would be little comfort to the Reserve Bank of New Zealand (RBNZ) as wages grew a miserly 0.3 percent, below expectations of a 0.4 percent rise.

Annual wage growth was stuck at 1.9 percent versus first-quarter inflation of 1.1 percent.

The RBNZ, which is set to announce its next rate decision on May 10, has signalled it will keep rates on hold at a record low of 1.75 percent, possibly for years, as it grapples with low inflation even as the economy posts robust growth.

The New Zealand dollar edged down to \$0.6993, from \$0.6007 before the release.

The labour figures were the first to be issued since the government added the goal of 'maximising sustainable employment' to the RBNZ's mandate, alongside inflation targeting.

Some economists had thought that an increased focus on employment could lead to more dovish monetary policy over time, but the almost decade-low jobless rate made that question largely academic for the central bank.

"The tight labour market currently looks to be in little need of policy stimulus to meet employment objectives in the new Policy Targets Agreement," ASB Senior Economist Mark Smith said in a research note.

China – Growth in China's manufacturing sector unexpectedly picked up in April as output quickened slightly, a private survey showed on Wednesday, though a decline in export orders reinforced risks to the outlook as firms continued to shed staff while inventories also rose.

The Caixin/Markit Manufacturing Purchasing Managers' index (PMI) climbed to 51.1 in April from a four-month low of 51.0 in March, and topped economists' forecast for a modest slowdown to 50.9.

While production rose at a slightly faster pace and the headline reading remained above the 50-point mark that divides growth from contraction on a monthly basis, the pace of acceleration was modest.

Particularly concerning was a sub-index on export orders shrinking for the first time since November 2016. The weak overseas sales reading was also backed up by an official PMI survey which showed shipment orders slowed last month - a worrying sign given the growing risks to the trade sector from a heated Sino-U.S. trade dispute.

Moreover, overall optimism among Chinese manufacturers dipped to a four-month low in April, with some firms citing concerns over future market conditions and the strength of global demand.

While the survey didn't make any reference to the U.S.-China trade row, underlying caution about the outlook reinforced views of an expected slackening in momentum in the world's second-biggest economy. Indeed, the survey showed "anecdotal evidence" of softer international demand.

"Overall, operating conditions across China's manufacturing sector continued to improve in April," Zhengsheng Zhong, director of Macroeconomic Analysis at CEBM Group, said in a note accompanying the survey.

"But uncertainty in exports has increased significantly, and the dependence of the Chinese economy on domestic demand is rising."

The private survey tends to focus on small and mid-sized firms, which have not benefited as much from a year-long, state-led construction boom as large, government-owned industrial heavyweights.

There was also a further reduction in headcount in April, pressured by soft demand conditions. Input price inflation picked up for the first time since September, likely due to the increases in crude oil prices, CEBM's Zhong said.

This may squeeze the profit margins of manufacturers as output price increases remained soft.

Any prolonged softness in overseas demand is likely to put intense pressure on China Inc., which helped the economy deliver solid growth last year thanks to increased government infrastructure spending, a resilient housing market and unexpected strength in exports.

Signs of stress have already started to emerge in softer industrial demand, slower investment growth and a subdued property market, leaving policymakers walking a tight rope as they try to defuse debt risks without imperiling growth. So far, with the deleveraging campaign in its third year, Beijing appears to have successfully managed that balancing act.

Economists expect China's economic growth to ease to 6.5 percent this year, in line with Beijing's target but below a forecast-beating 6.9 percent in 2017, with the regulatory crackdown on the country's finance sector and the growing trade dispute with the United States seen as key risks, a Reuters poll showed.

Euro Zone – Euro zone economic growth slowed as expected at the start of 2018, although economists said temporary factors were partly behind the weakness and that the economy should continue to expand strongly this year.

Gross domestic product across the 19 countries sharing the euro currency expanded by 0.4 percent in the first quarter compared to the last quarter of 2017 and by 2.5 percent year on year, EU statistics agency Eurostat said on Wednesday.

Eurostat's preliminary flash estimate was in line with economists' forecasts, but well below the 0.7 percent quarterly rises seen in the previous three quarters.

The growth rate pushed the euro zone behind the United States, but still ahead of Britain, which registered its weakest growth since 2012.

Economic sentiment data slipped in March but remained broadly unchanged in April, leading analysts to forecast that the euro zone economy will ease back to still-healthy growth levels of about 2 percent year-on-year in the coming quarters.

But it was seen as unlikely to match the 2.5 percent expansion seen in 2017.

"Temporary factors, including unseasonably cold weather, striking workers, short-term bottlenecks and even an outbreak of the flu, appear to have weighed on GDP growth in Q1," economists at Capital Economics said in a note to clients.

"Given the high level of consumer confidence, we suspect that consumption growth will pick up in Q2 and help to push quarterly GDP growth back to around 0.5 or 0.6 percent."

Confidence took a dip in part over concerns about a trade war with the United States, which could still be sparked if Washington imposes tariffs on steel and aluminium imports from the European Union. A decision on this is due by June 1.

In a separate statement, Eurostat said unemployment in the euro zone was stable in March at 8.5 percent.

UK – British construction activity rebounded faster than expected last month after succumbing to snow in March, but the upturn did little to alter the view of investors that the Bank of England will leave interest rates unchanged next week.

Wednesday's IHS Markit/CIPS UK Construction Purchasing Managers' Index (PMI) jumped to 52.5 in April from 47.0 in March. That was comfortably above the median expectation of 50.5 in a Reuters poll of economists and back above the 50 line that separates growth from contraction.

Sterling rose from near a three-and-a-half-month low against the dollar before the report.

"Whilst it is improbable that this (data) will bring a rate hike back to the table in next week's BoE meeting, it is a pleasing development nonetheless," said David Cheetham, a market analyst for currency brokers XTB Online Trading.

Survey compiler IHS Markit said the recovery was "somewhat underwhelming" after the snowstorms dubbed "the Beast from the East" hit the sector in late February and early March.

Looking at the PMI over the three months to April, smoothing out a sharp fall in March and a bounce-back last month, the survey showed construction activity was barely growing.

"(The survey) provides an indication that the construction sector has been treading water at the very best in recent months," Tim Moore, economist at IHS Markit, said.

Construction accounts for 6 percent of British economic output. A 3.3 percent fall in output in the sector in the first three months of the year was largely responsible for a sharp slowdown in growth for the whole economy.

Official statisticians said the first-quarter weakness appeared to have been caused by more than just snow, and economists are keeping a close eye on whether surveys show a recovery in April, or if there is underlying weakness.

A separate survey covering Britain's manufacturers, which was published on Tuesday, showed growth in that sector slowed to a 17-month low in April, sending sterling below \$1.37 for the first time in more than three months.

Even before this week's PMIs and weak overall economic growth data for the January-March period last week, Governor Mark Carney had suggested the BoE might not raise rates to a new post-financial-crisis high of 0.75 percent on May 10.

Wednesday's PMI showed some signs of a brightening mood in construction. Business expectations rose to an 11-month high in April, while new construction orders grew for the first time in four months - albeit barely.

Builders were doing better outside of London, accountancy firm MHA MacIntyre Hudson said.

"Today's figures may give the impression the sector is flat-lining, but the truth is that outside of London the housing market is ticking over nicely," said Brendan Sharkey, a partner at the firm who focuses on construction and property companies.

The PMI for the much larger services sector is due on Thursday.

U.S. – Following is the full text of the statement released by the Federal Reserve's Federal Open Market Committee on Wednesday following a two-day meeting:

Information received since the Federal Open Market Committee met in March indicates that the labor market has continued to strengthen and that economic activity has been rising at a moderate rate. Job gains have been strong, on average, in recent months, and the unemployment rate has stayed low. Recent data suggest that growth of household spending moderated from its strong fourth-quarter pace, while business fixed investment continued to grow strongly. On a 12-month basis, both overall inflation and inflation for items other than food and energy have moved close to 2 percent. Market-based measures of inflation compensation remain low; survey-based measures of longer-term inflation expectations are little changed, on balance.

Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that, with further gradual adjustments in the stance of monetary policy, economic activity will expand at a moderate pace in the medium term and labor market conditions will remain strong. Inflation on a 12-month basis is expected to run near the Committee's symmetric 2 percent objective over the medium term. Risks to the economic outlook appear roughly balanced.

In view of realized and expected labor market conditions and inflation, the Committee decided to maintain the target range for the federal funds rate at 1-1/2 to 1-3/4 percent. The stance of monetary policy remains accommodative, thereby supporting strong labor market conditions and a sustained return to 2 percent inflation.

In determining the timing and size of future adjustments to the target range for the federal funds rate, the Committee will assess realized and expected economic conditions relative to its objectives of maximum employment and 2 percent inflation. This assessment will take into account a wide range of information, including measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial and international developments. The Committee will carefully monitor actual and expected inflation developments relative to its

symmetric inflation goal. The Committee expects that economic conditions will evolve in a manner that will warrant further gradual increases in the federal funds rate; the federal funds rate is likely to remain, for some time, below levels that are expected to prevail in the longer run. However, the actual path of the federal funds rate will depend on the economic outlook as informed by incoming data.

Canada – Bank of Canada Governor Stephen Poloz said on Tuesday that the view of the Canadian economy is quite good despite record levels of household debt, and he was confident the central bank can manage the risk of that debt even as interest rates rise.

Speaking in Yellowknife, Poloz reiterated that policy makers will be cautious as they watch to see the impact on households of the bank's three rate hikes since last July, but said rates are far below the level considered neutral and will naturally rise.

"Right now things are fine, but the tension is there, the vulnerability is increasing, and since the economy is close to where it belongs, interest rates are headed higher," Poloz told the Yellowknife Chamber of Commerce.

Poloz gave no hints about the timing of the bank's next rate hike, but his upbeat tone boosted the Canadian dollar and increased market expectations for a rate hike in July to 73 percent from 68 percent before he spoke, data from the overnight index swaps market showed.

Poloz said economic progress had made the bank more confident that higher interest rates would be required over time, although some monetary policy accommodation will still be needed. He reiterated that the bank's rate moves would be guided by incoming data and said it was too soon to say what impact rate hikes have had so far.

"With Governor Poloz indicating that the economy still isn't reflecting the full effects of the past three rate hikes, the Bank is likely to wait until July to pull the trigger again, and then spread out future rate hikes given the language surrounding the long lags implicit in monetary policy changes," CIBC economist Royce Mendes said in a note to clients.

Poloz said several forces were restraining Canada's economy, including new mortgage rules, uncertainty about U.S. trade policy and the renegotiation of the North American Free Trade Agreement, and a range of competitiveness challenges.

"Those forces will not last forever. As they fade, the need for continued monetary stimulus will also diminish and interest rates will naturally move higher," Poloz said in his speech.

While Canada's record high household debt makes the economy more vulnerable, the bank's cautious approach is helping to manage the risks, Poloz said.

ASIAN STOCK INDEX

Japan's Nikkei share average slipped on Wednesday amid caution ahead of the Federal Reserve's policy decision and U.S. jobs data, although the dollar's rise against the yen and positive sentiment toward tech stocks helped curb some of the losses.

The Nikkei ended the day down 0.16 percent at 22,472.78 and the broader Topix dropped 0.15 percent to 1,771.52.

Japanese markets will be closed on Thursday and Friday for public holidays, leaving Wednesday as the last day for investors to unwind some of their positions ahead of the Fed's decision later in the global day. On Friday, U.S. jobs data will be released.

Automakers slipped after several posted weaker new U.S. vehicle sales in April with consumer demand in the world's largest economy continuing to soften.

Toyota Motor Corp, which posted a 4.7 percent decline in April U.S. sales, slipped 0.4 percent. Nissan Motor Co dropped 2 percent after its April U.S. sales fell 28 percent and Honda Motor Co was down 2.3 percent after its April U.S. sales declined 9.2 percent.

Fujifilm Holdings Corp slid 5.4 percent after Xerox Corp said its CEO and several board members will step down to settle a suit brought by activist shareholders who had opposed a \$6.1 billion deal with Fujifilm.

Technology firms were buoyant after Apple Inc's March quarter results topped Wall Street forecasts.

South Korea's KOSPI stock index slipped on Wednesday. The Korean won fell against the dollar on the local platform as the dollar strengthened across the board, while bond yields rose.

At 06:30 GMT, the KOSPI closed down 9.77 points or 0.39 percent at 2,505.61.

Shares in Samsung BioLogics Co Ltd ended down 17.2 percent, losing almost \$6 billion in value, after South Korea's financial watchdog provisionally decided it had breached an accounting rule.

Hyundai Mobis Co Ltd said on Wednesday it planned to buy back and cancel its treasury shares worth 187.5 billion Korean won. The company's shares lost 1.8 percent on the day.

The won was quoted at 1,076.1 per dollar on the onshore settlement platform, 0.75 percent weaker than its previous close at 1,068.

In offshore trading, the won was quoted at 1,075.31 per U.S. dollar, down 0.26 percent from the previous day, while in one-year non-deliverable forwards it fetched 1,058.6 per dollar.

MSCI's broadest index of Asia-Pacific shares outside Japan was down 0.20 percent, after U.S. stocks ended the previous session with mild gains Japanese stocks weakened 0.16 percent.

The KOSPI is up around 1.9 percent so far this year, and up by 1.63 percent in the previous 30 days.

The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won.

The trading volume during the session on the KOSPI index was 790,300,000 shares and, of the total traded issues of 878, the number of advancing shares was 497.

Hong Kong stocks fell on Wednesday, as investors braced for trade talks between U.S. and Chinese officials, and awaited the U.S. Federal Reserve's upcoming policy statement.

The Hang Seng index fell 0.3 percent to 30,723.88, while the China Enterprises Index lost 1.1 percent to 12,193.59 points.

Senior U.S. and Chinese officials will hold trade talks from Thursday in Beijing, as Washington threatens to impose tariffs on up to \$150 billion of Chinese imports and Beijing vowed to retaliate.

The Fed is seen set to hold interest rates steady on Wednesday but will likely encourage expectations that it will lift borrowing costs in June on the back of rising inflation and low unemployment.

The sub-index of the Hang Seng tracking energy shares dipped 0.1 percent, while the IT sector rose 0.45 percent, the financial sector was 0.72 percent lower and the property sector dipped 0.49 percent.

The top gainer on Hang Seng was Sunny Optical Technology Group Co Ltd up 4.92 percent, while the biggest loser was Bank of Communications Co Ltd which was down 2.32 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.15 percent, while Japan's Nikkei index closed down 0.16 percent.

The yuan was quoted at 6.3616 per U.S. dollar at 08:25 GMT, 0.48 percent weaker than the previous close of 6.331.

China stocks ended Wednesday roughly flat as investors returning from the Labour Day holiday braced for trade talks between U.S. and Chinese officials amid worries about economic health.

The blue-chip CSI300 index rose 0.2 percent, to 3,763.65, while the Shanghai Composite Index ended flat at 3,081.18 points.

Senior U.S. and Chinese officials will hold trade talks from Thursday in China, as Washington threatens to impose tariffs on up to \$150 billion of Chinese imports and Beijing vowed to retaliate.

Investors are also concerned over the health of China's economy. "Despite a solid Q1, we still see some concerns and expect more downward pressure on bottomline growth in the next few quarters," Gao Ting, head of China Strategy at UBS Securities, wrote.

The blue-chip CSI300 index was up, with its financial sector sub-index higher by 0.05 percent, the consumer staples sector up 0.38 percent, the real estate index down 0.4 percent and healthcare sub-index up 0.52 percent.

The smaller Shenzhen index ended down 0.07 percent and the start-up board ChiNext Composite index was weaker by 0.22 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.14 percent, while Japan's Nikkei index closed down 0.16 percent .

CURRENCIES – Daily Outlook

Dollar dips as Fed seen more likely to tolerate inflation - Reuters News

The U.S. dollar fell from 2018 highs set earlier on Wednesday after the Federal Reserve indicated it may allow inflation to run above its 2 percent target, raising concerns that monetary accommodation will stay loose even as they hike rates.

The U.S. central bank held interest rates steady and in a statement following the end of a two-day policy meeting said that inflation had "moved close" to its target and that "on a 12-month basis is expected to run near the Committee's symmetric 2 percent objective over the medium term."

"Markets are pretty much focused on

the symmetric language, that's kind of code for willing to let them overshoot their inflation target," said Mark McCormick, North American head of fx strategy at TD Securities in Toronto.

"If inflation moves higher and they don't respond to it, they are essentially keeping the accommodation in the economy the same," McCormick said. "That's negative for the dollar because ... the dollar needs higher real rates to essentially pull in the funding from the rest of the world."

Real rates adjust for the impact of inflation.

The dollar index turned negative on the day, falling 0.10 percent to 92.358, after rising before the Fed statement to 92.718, the highest level since Dec. 28.

The greenback has been bolstered in recent weeks by the expectation that the Fed will continue to raise rates while other central banks, including the European Central Bank, are seen as taking longer to normalize monetary policy.

Investors had been betting the euro would appreciate against the U.S. currency as the ECB removed stimulus, before a spate of weaker-than-expected data made this less likely in the nearer-term.

Investors are next focused on Friday's U.S. employment report for April for further indications of the strength of the economy and inflation pressures.

U.S. private-sector employers hired 204,000 workers in April, the smallest monthly increase since November, the ADP National Employment Report showed.

Precious Metal – Daily Outlook**Gold extends gains as dollar weakens after dovish Fed remarks - Reuters News**

Gold prices extended gains on Wednesday after the U.S. Federal Reserve's dovish remarks weakened the dollar against a basket of currencies, yet bullion remained vulnerable to a possible rising greenback and weak investment demand.

In a statement following the end of a two-day policy meeting, the Fed held interest rates steady as expected. The central bank said inflation had "moved close" to its target and that "on a 12-month basis is expected to run near the

(policy-setting) Committee's symmetric 2 percent objective over the medium term."

The Fed's rate-setting committee downplayed a recent slowdown in economic and job growth, saying that activity had been expanding at a moderate rate and job gains, on average, had been strong in recent months.

"The gold market is seeing this as a little dovish, primarily because some continued to expect the Fed to hike four times this year and the messaging was a little bit soft," said TD Securities' Daniel Ghali.

Higher interest rates dent the appeal of gold, which earns nothing and costs money to store and insure.

Spot gold was up 0.7 percent at \$1,312.14 per ounce by 2:33 p.m. EDT (1833 GMT), while U.S. gold futures for June delivery settled down \$1.20, or 0.1 percent, at \$1,305.60.

The greenback tipped further below 3-1/2 month highs hit on Tuesday, making dollar-priced gold cheaper for holders of other currencies, which boosted interest.

Yet, the U.S. dollar is still expected to strengthen as the euro is expected to weaken, said Walter Pehowich of Dillon Gage Metals. "I think (today's move) is only temporary. Gold will still continue to be under pressure on the stronger dollar. Gold still has more room to the downside."

The Fed expressed confidence that a recent rise in inflation to near the U.S. central bank's target would be sustained, leaving it on track to raise borrowing costs in June.

"Rising inflation expectations, an overall bullish commodity trend (late-cycle preference for commodities), geopolitical and financial risks are being offset by a rising dollar and rising real-rates," Saxo Bank analysts said in a note.

Investors often use gold as a hedge against inflation.

But for now, relatively tame commodities prices are "keeping longer term inflation at bay," and pressuring gold, said Rob Lutts, chief investment officer of Cabot Wealth Management.

Meanwhile, spot silver rose 2.4 percent at \$16.50 per ounce and palladium climbed 1.9 percent at \$966.90.

Platinum gained 0.7 percent at \$896.24 an ounce, earlier dropping to \$888, its lowest since Dec. 18.

OIL – Daily Outlook

Oil gains slightly after Fed sees economy growing at a 'moderate rate' - Reuters News

Oil prices strengthened slightly ahead of the settlement Wednesday as the Federal Reserve held interest rates steady and expressed confidence that a recent rise in inflation would be sustained.

The Fed's rate-setting committee also downplayed a recent slowdown in economic and job growth, saying that activity had been expanding at a moderate rate and job gains, on average, had been strong in recent months.

Oil demand is closely tied to broader indicators of economic growth.

Earlier in the session, the market shrugged off a surprise build in U.S. crude inventories because the move was largely concentrated on the U.S. West Coast. Crude stockpiles posted a surprise build of 6.2 million barrels in the week, according to the U.S. Energy Information Administration. Nearly 5 million barrels were concentrated on the West Coast.

"That's why the market isn't reacting that much, because sometimes the West Coast numbers are erratic and usually when you get a big build in the West Coast, it's followed with a big draw the next week," said Phil Flynn, an analyst at Price Futures Group. "The market is putting that in perspective," he said. At the same time, distillate demand was strong, he said, offsetting the downward pressure on crude.

July Brent futures settled up 23 cents at \$73.36 a barrel. U.S. West Texas Intermediate crude futures settled up 68 cents at \$67.93.

Iran, a member of the Organization of the Petroleum Exporting Countries, re-emerged as a major oil exporter in January 2016 when some international sanctions against Tehran were lifted in return for curbs on Iran's nuclear programme.

The United States has questioned Iran's sincerity in implementing the nuclear curbs and President Donald Trump has threatened to reimpose sanctions if adjustments are not made to the agreement.

Iran's oil exports hit 2.6 million barrels per day (bpd) in April, according to the Oil Ministry, a record since the lifting of sanctions. China and India bought more than half of the oil.

"The expectation that the U.S. will leave the sanctions waivers is leading Iran to sell as much as it can," Petromatrix strategist Olivier Jakob said.

Trump will decide by May 12 whether to restore U.S. sanctions on Iran, which would likely reduce its oil exports.

"If Trump abandons the deal, he risks a spike in global oil prices," said Ole Hansen, head of commodity strategy at Saxo Bank, noting that reintroducing U.S. sanctions could remove 300,000-500,000 bpd of Iranian oil from global supplies.

However, the rising value of the dollar since mid-April and soaring U.S. supplies have helped check further oil price gains, traders said.
