GLOBAL MARKETS

- The U.S. dollar touched a two-week low on Tuesday as traders bet on riskier currencies on new signs of a thaw in relations between North and South Korea and the North's willingness to discuss denuclearization with the United States.

GLOBAL ECONOMIES

- Australia's central bank left interest rates at record lows on Tuesday, as expected, and sounded less confident that the economy would grow at 3 percent or more this year, in another sign rates will likely remain on hold for months to come.
- New Zealand's finance minister said on Tuesday that Chris Eichbaum would return to the Reserve Bank of New Zealand's (RBNZ) board as its seventh member.
- A raft of Chinese economic data in the next few weeks is expected to show growth was mostly stable at the start of the year as exports picked up and factory activity remained largely resilient despite tougher air pollution measures.
- Japan's central bank chief said on Tuesday a future exit from ultra-easy monetary policy would need to be "very gradual", in comments analysts described as a bid to temper expectations about a near-term end to crisis-mode stimulus.
- Eight northern European countries said on Tuesday that euro zone reforms should focus on completing the banking union, improving compliance with budget rules and setting up a European Monetary Fund, with more ambitious plans left for later.
- New orders for U.S.-made goods recorded their biggest decline in six months in January and business spending on equipment appeared to be slowing after strong growth in 2017.

GLOBAL MARKETS

U.S. & Global Markets – The U.S. dollar touched a two-week low on Tuesday as traders bet on riskier currencies on new signs of a thaw in relations between North and South Korea and the North's willingness to discuss denuclearization with the United States.

North and South Korea, still technically at war since 1953 but with tensions having eased since the Winter Olympics hosted by the South last month, will hold their first summit in more than a decade next month, South Korea said on Tuesday. It also said the North would suspend nuclear tests while proposed talks with the United States on denuclearization were under way. But the U.S. stock market focused on concerns over a possible trade war after U.S. President Donald Trump announced planned tariffs on imports of steel and aluminum last week. The major indexes eked out small gains on Tuesday as investors weighed mixed signals from Washington.

Republican lawmakers stepped up calls for Trump to pull back from the tariffs as key trading partner Mexico rejected a bid by Washington to drive a wedge between it and Canada in talks to renegotiate the North American Free Trade Agreement, while Trump reiterated his plan to go ahead with the tariffs.

The U.S. dollar, seen as a safe haven against risk in recent months, fell further after news of the North and South Korea talks as investors bought the Australian and New Zealand dollars and some emerging market currencies.

"It's too early to wholeheartedly buy these currencies because of the chances of escalating trade tension between the U.S. and its trading partners," said Omer Esiner, chief market analyst at Commonwealth Foreign Exchange in Washington.

The dollar index, which tracks the greenback against a basket of other major currencies, fell 0.56 percent, up 0.04 percent to after touching its lowest level since Feb. 20. The euro rose 0.57 percent to \$1.2405.

The Japanese yen weakened 0.02 percent versus the greenback, to 106.16 per dollar, while sterling was at \$1.3888, up 0.02 percent.

Traders await clues on monetary policy direction when the European Central Bank and the Bank of Japan hold policy meetings on Thursday and Friday.

"The strength of the euro is starting to put pressure on the euro-zone economy. This is putting pressure on the ECB," said Jack McIntyre, portfolio manager at Brandywine Global in Philadelphia.

Stocks edged higher in Europe, as well as in the United States, while a global gauge of major equity markets was boosted largely by gains in Asia after stocks there were battered Monday on concerns over a global trade war. Those worries eased during U.S. market hours on Monday, so Asian equities were catching up.

On Wall Street, the S&P 500 rose for a third straight session, though it was unclear what Trump's final decision on tariffs would be.

"The market is basically grasping for straws around what the (tariff) policy is going to be. Based on the action we saw today it's hoping it doesn't turn into a trade war," said Jonathan Mackay, investment strategist at Schroders Investment Management in New York, adding that the news out of the Korean peninsula "helps around the margin."

The Dow Jones Industrial Average rose 9.36 points, or 0.04 percent, to 24,884.12, the S&P 500 gained 7.18 points, or 0.26 percent, to 2,728.12, and the Nasdaq Composite added 41.30 points, or 0.56 percent, to 7,372.01.

The pan-European FTSEurofirst 300 index rose 0.10 percent and MSCI's gauge of stocks across the globe gained 0.65 percent.

Emerging market stocks rose 1.51 percent. MSCI's broadest index of Asia-Pacific shares outside Japan closed 1.67 percent higher, while Japan's Nikkei rose 1.79 percent to snap a four-day losing run.

U.S. Treasury yields were little changed in choppy trading as optimism grew that Trump may back down from his proposed tariffs, even though he said he would not.

Trump's suggestion that Canada and Mexico could be exempted if a new North American Free Trade Agreement was reached drove market participants to see his tariff plan as leverage in NAFTA talks.

"It does seem as though Trump has laid out the fact that he's using these tariffs as a negotiating tactic," said Gennadiy Goldberg, an interest rate strategist at TD Securities in New York.

Benchmark 10-year U.S. Treasury notes last fell 2/32 in price to yield 2.8863 percent, from 2.879 percent late on Monday.

The 30-year bond last fell 2/32 in price to yield 3.1531 percent, from 3.151 percent late on Monday.

Treasuries prices were also pressured by strong demand for CVS Health's \$40 billion M&A bond, which gave a shot of confidence to the U.S. high-grade bond market Tuesday after a recent bout of volatility in the usually rock-solid asset class. [\(Source Reuters – @her1en\)](#)

GLOBAL ECONOMIES

Australia – Australia's central bank left interest rates at record lows on Tuesday, as expected, and sounded less confident that the economy would grow at 3 percent or more this year, in another sign rates will likely remain on hold for months to come.

The Reserve Bank of Australia (RBA) expects the country's gross domestic product (GDP) to "grow faster in 2018 than it did in 2017", as it entirely removed reference to expectations of "above 3 percent" growth over the next couple of years.

The change in rhetoric comes as analysts downgrade forecasts for fourth-quarter GDP, due Wednesday.

A Reuters poll of analysts last week showed economists expect GDP to have expanded by 0.6 percent on quarter and 2.5 percent on year in the December quarter. However, recent soft indicators have prompted analysts to trim these expectations to rises of around 0.5 percent and 2.4 percent, respectively.

"The RBA has definitely softened its language around growth," said Tom Kennedy, Sydney-based senior economist at JPMorgan. "I think the change means gradually and very slowly they're stepping away from the 3 percent target," he added.

"Wage growth has been low, consumption has been really weak since mid-2017, net exports have been weaker than RBA's expectations. So when you add up all the bits and pieces you get a small figure."

Analysts are divided evenly on the chance of a rate hike by December, while interest rate futures are not fully priced for a 25-basis point rise until early 2019.

The RBA is one of the less hawkish central banks in the developed world. The U.S. Federal Reserve is expected to raise rates at least three times this year and the European Central Bank is seen stepping back from its massive asset buying programme soon.

New Zealand – New Zealand's finance minister said on Tuesday that Chris Eichbaum would return to the Reserve Bank of New Zealand's (RBNZ) board as its seventh member.

The appointment comes at a time when New Zealand's Labour-led government, which took the helm in October, is conducting a review of the central bank's mandate in a bid to make good on an election promise to include maximising employment as a monetary policy goal.

Eichbaum had served on the RBNZ's board in between 2008 and 2013 and is currently an academic at Victoria University's school of government.

"Dr Eichbaum brings his experience as a previous Board member at a critical time of change," Finance Minister Grant Robertson said in an emailed statement.

"His understanding of public policy and the place of monetary policy in that context will also be very helpful as the review of the Reserve Bank Act progresses."

Eichbaum has been appointed for a five-year term and is filling a vacancy left by previous board member Rod Carr, who retired in 2017.

China – A raft of Chinese economic data in the next few weeks is expected to show growth was mostly stable at the start of the year as exports picked up and factory activity remained largely resilient despite tougher air pollution measures.

Business surveys last week gave a mixed picture about the health of the world's second-largest economy in February.

But analysts cautioned that the timing of long Lunar New Year holidays, which fell in mid-February this year, will distort trends as usual and said investors may not get a clearer picture of China's economic health until first-quarter data is released in April.

Premier Li Keqiang kicked off annual parliament meetings on Monday by saying China aims to expand its economy by around 6.5 percent this year. That is the same target as in 2017, when actual growth came in at 6.9 percent.

Li also stressed the government needs to take further steps to reduce risks in the financial system, which analysts believe will eventually rob the economy of some growth momentum by making banks more cautious about lending and pushing up borrowing costs.

February foreign exchange reserves will be published Wednesday, followed by trade data on Thursday and inflation on Friday. Bank lending and money supply data will be released anytime March 10-15.

In an attempt to iron out Lunar New Year distortions, China will announce combined January and February data for industrial output, fixed asset investment and retail sales on March 14.

One big change this year could be a reversal of strong growth in China's factory inflation, which helped boost industrial profits last year, according to a Reuters poll of 42 economists. Stronger earnings also helped boost cash flow, giving companies more room to pay down debt, a key policy goal for Beijing.

Following on January's solid export data, growth likely picked up further to an 11-month high in February. However, import growth likely slowed dramatically from January due more to seasonal factors than an abrupt softening in demand.

Resurgent exports last year helped boost China's overall growth, though trade tensions are escalating rapidly this year as U.S. President Donald Trump prepares to roll out new tariffs on steel and aluminium imports and threatens other punitive measures.

Japan – Japan's central bank chief said on Tuesday a future exit from ultra-easy monetary policy would need to be "very gradual", in comments analysts described as a bid to temper expectations about a near-term end to crisis-mode stimulus.

Bank of Japan Governor Haruhiko Kuroda startled markets last week when he told lawmakers that the central bank could consider exiting easy policy if his inflation target was met in fiscal 2019 as projected, remarks that sent the yen and bond yields higher.

Speaking in parliament again on Tuesday, he said the BOJ had the necessary tools to engineer a smooth exit from easy policy and was already brainstorming how a future stimulus exit could affect its balance sheet, but sounded caution about withdrawing too quickly.

"When the BOJ exits, it will be a very gradual process ... so as not to trigger a spike in long-term interest rates or a disruption in financial markets," Kuroda said on Tuesday.

"We need to move cautiously so as not to hurt the economy and prices," he said, adding that details on when and how to exit will depend on economic and price conditions at the time.

Kuroda stressed that an actual exit from easy policy was some time away with inflation, now at 0.9 percent, still distant from his 2 percent target.

"Underlying price moves remain weak, so our feeling is that there is some distance to achieving our price target," Kuroda said. "It's unthinkable to end or weaken the degree of monetary easing before our inflation target is met."

Kuroda appeared before the upper house of parliament for confirmation hearings after the government reappointed him to serve another five-year term when the current one ends in April.

It is a near certainty parliament will approve the government's nomination because premier Shinzo Abe's ruling coalition holds a majority in both houses of parliament.

"Kuroda sounded confident about an exit probably out of need to reassure market the BOJ can engineer a smooth exit when the appropriate time comes," said Masaki Kuwahara, senior economist at Nomura Securities.

"I think the BOJ will stand pat at least until fiscal 2020 given tepid inflation."

Euro Zone – Eight northern European countries said on Tuesday that euro zone reforms should focus on completing the banking union, improving compliance with budget rules and setting up a European Monetary Fund, with more ambitious plans left for later.

Denmark, Estonia, Finland, Ireland, Latvia, Lithuania, the Netherlands and Sweden were referring to French proposals for deepening euro zone integration, discussion of which has been on hold pending the formation of a new government in Germany.

"Stronger performance on national structural and fiscal policies in line with common rules... should have priority over far-reaching proposals," they said in a joint statement.

Following the formation of a new "Grand Coalition" in euro zone powerhouse Germany, Chancellor Angela Merkel is expected to continue talks about reforming the 19-country currency bloc with French President Emmanuel Macron.

The northern countries are cautious about Macron's ambitious plans, which include a joint euro zone budget or common finance ministry.

The group, which includes non-euro members Denmark and Sweden, said the integration plans should focus on areas where member states are already closest to a compromise, like the completion of the banking union.

"There are "nice to have" reforms, like a common finance ministry, but they do not solve the real problems. That will only be done through pragmatic steps," Finland's Finance Minister Petteri Orpo told Reuters by telephone.

"We should not implement quasi-reforms, but be honest and acknowledge which reforms actually fix the problems we're facing."

The northern group said it supports the idea of expanding the European Stability Mechanism (ESM) fund into a European monetary fund but it does not back the European Commission's proposal on having the European Parliament oversee it.

"An EMF should have greater responsibility for the development and monitoring of financial assistance programmes. Decision-making should remain firmly in the hands of Member States", the statement said.

The EU executive has suggested transforming the euro zone's government-owned-and-run bailout fund into a European Monetary Fund in December. The idea of expanding the role of the bailout fund is backed by Germany and France.

The "Northern Lights" group, comprising the EU's Nordic members, Ireland and the Netherlands, often joined forces with Britain to battle more protectionist traditions in France and Germany or eastern and southern states hungry for EU subsidies.

But Britain's impending departure from the EU has prompted the group to look for new allies, such as the free-trading Baltic states.

U.S. – New orders for U.S.-made goods recorded their biggest decline in six months in January and business spending on equipment appeared to be slowing after strong growth in 2017.

Factory goods orders dropped 1.4 percent amid a broad decrease in demand, the Commerce Department said on Tuesday. That was the largest drop since July 2017 and ended five straight months of increases.

December's report was revised to show orders rising 1.8 percent instead of the previously reported 1.7 percent increase.

Orders for transportation equipment dropped 10.0 percent, weighed down by a 28.4 percent plunge in the volatile orders for civilian aircraft. Economists polled by Reuters had forecast factory orders decreasing 1.3 percent in January. Orders surged 8.4 percent on a year-on-year basis.

Orders for non-defense capital goods excluding aircraft, which are seen as a measure of business spending plans, fell 0.3 percent in January instead of declining 0.2 percent as reported last month. Orders for these so-called core capital goods decreased 0.5 percent in December.

That was the first back-to-back drop since May 2016. Shipments of core capital goods, which are used to calculate business equipment spending in the gross domestic product report, slipped 0.1 percent in January instead of edging up 0.1 percent as reported last month.

Core capital goods shipments increased 0.7 percent in December. Business spending on equipment is cooling after growing by a robust 4.8 percent in 2017.

But it is likely to remain supported as companies are expected to use some of their windfall from a \$1.5 trillion tax cut package to buy machinery and other equipment as they seek to boost sluggish productivity.

The Trump administration slashed the corporate income tax rate to 21 percent from 35 percent effective in January. The tax cuts, a weakening U.S. dollar and strengthening global economy are expected to support manufacturing, which makes up about 12 percent of the U.S. economy.

Sentiment among manufacturers remains bullish, a survey last week showing a measure of factory activity rising in February to its highest level since May 2004. But supply constraints and labor shortages are emerging, which could hurt factory output.

In January, orders for machinery dropped 0.4 percent, the biggest decline since October 2016, after rising 0.6 percent in December. Orders for mining, oil field and gas field machinery tumbled 8.9 percent. Orders for motor vehicles fell 0.5 percent.

ASIAN STOCK INDEX

Japan's Nikkei share average rose on Tuesday to snap a four-day losing run after Wall Street shares rallied overnight, with the dollar's bounce lifting exporter shares.

The Nikkei ended the day up 1.79 percent at 21,417.76.

The index's four-day run of losses reflected a slump in global risk sentiment after U.S. President Donald Trump proposed stiff tariffs on imported steel and aluminium last week.

Equity markets rebounded, however, as fears of a global trade war ebbed somewhat as expectations rose that Trump would back down from imposing the tariffs.

Japan's big car exporters were supported by the dollar's rebound versus the yen.

The largest percentage gainer in the Nikkei index was Japan Steel Works Ltd, which rose 9.05 percent.

There were 201 advancers on the index against 19 decliners.

The broader Topix was 1.27 percent higher at 1,716.30.

The dollar was at 106.205 yen, having recovered from a 15-month low of 105.240 plumbed on Friday.

South Korean KOSPI stock index rebounded on Tuesday after a four-day decline as trade worries eased over U.S. President Donald Trump's plan to impose heavy tariffs on steel products and automobiles. The Korean won and bond yields also rose.

With market sentiment revived, investors' appetite for major tech shares heightened. Shares of Samsung Electronics and SK Hynix ended 4 percent higher and closed up 5.2 percent, respectively.

MSCI's broadest index of Asia-Pacific shares outside Japan was up 1.50 percent, after U.S. stocks ended higher in the previous session Japanese stocks rose 1.79 percent.

The KOSPI dropped around 3.7 percent so far this year, and is down by 5.58 percent in the previous 30 days.

The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won.

The trading volume during the session on the KOSPI index was 395,970,000 shares, and of the total traded issues of 885, the number of advancing shares were 522.

In money and debt markets, March futures on three-year treasury bonds dipped 0.02 points to 107.65.

The Korean 3-month Certificate of Deposit benchmark rate was quoted at 1.65 percent, while the benchmark 3-year Korean treasury bond yielded 2.314 percent, higher than 2.31 percent in the previous session.

Hong Kong shares rebounded sharply on Tuesday, as Asian markets regained ground amid signs U.S. President Donald Trump is facing growing pressure from political allies to pull back from proposed steel and aluminium tariffs.

The Hang Seng index rose 2.1 percent, to 30,510.73, while the China Enterprises Index gained 2.7 percent, to 12,311.54 points.

On Monday, the Hang Seng dropped 2.3 percent.

Resources shares jumped on Tuesday, as China said it would ensure steel and coal capacity cuts would be market-based and prevent rule violations. Aluminium maker Chalco surged more than 4 percent.

Banking stocks also posted robust gains, on news that China's banking regulator plans to cut the provision coverage ratio for commercial banks to 120-150 percent from 150 percent. Yip of First Shanghai Securities said the move would allow banks to lend more and would increase their profit.

The sub-index of the Hang Seng tracking energy shares climbed 2.8 percent while the IT sector rose 2.98 percent and property sector by 1.05 percent.

The top gainer on Hang Seng was Want Want China Holdings Ltd up 4.4 percent, while the biggest loser was Bank of East Asia Ltd, down 0.59 percent.

China stocks rebounded on Tuesday, aided by robust gains in shares of real estate and healthcare firms, as worries of an imminent trade war eased.

The tech-heavy start-up index, ChiNextp, closed at a five-week high, recouping most of its lost ground since late January, as the country plans new share issue option to bring tech giants home.

China may allow its offshore-listed tech giants to sell a form of shares on the mainland, people with knowledge of the plan said, in a move that would pit Shanghai and Shenzhen against Hong Kong in the battle to host the country's tech giants.

At the close, the Shanghai Composite index was up 1 percent at 3,289.64.

The blue-chip CSI300 index was up 1.2 percent, with its financial sector sub-index gaining 1.62 percent. Consumer staples sector was down 0.05 percent while the real estate index rose 4.31 percent and healthcare sub-index gained 2.17 percent.

The smaller Shenzhen index ended 1.17 percent higher and the start-up board ChiNext Composite index was firmer by 0.11 percent.

Around the region, MSCI's Asia ex-Japan stock index was firmer by 1.64 percent while Japan's Nikkei index closed up NOT AVAILABLE percent.

So far this year, the Shanghai stock index is down 0.5 percent.

About 19.54 billion shares were traded on the Shanghai exchange, roughly 96.3 percent of the market's 30-day moving average of 20.30 billion shares a day. The volume in the previous trading session was 14.48 billion.

As of 07:07 GMT, China's A-shares were trading at a premium of 28.20 percent over the Hong Kong-listed H-shares.

The Shanghai stock index is below its 50-day moving average and below its 200-day moving average.

The price-to-earnings ratio of the Shanghai index was 14.85 as of the last full trading day while the dividend yield was 2 percent.

So far this week, the market capitalisation of the Shanghai stock index has risen by 0.03 percent to 29.13 trillion yuan.

CURRENCIES – Daily Outlook

Dollar slips as Korea talk offsets trade worries - Reuters News

The dollar fell to a one-week low on Tuesday against a basket of currencies as traders piled back into riskier currencies after an agreement between North and South Korea to hold direct talks.

The greenback had already been weakening on worries about a trade war due to U.S. President Donald Trump's proposed tariffs last week on imported steel and aluminium. The dollar, seen as a safe-haven against risk in recent months, fell further after news of the North and South Korea talks as investors bought the Australian and New Zealand

dollars and emerging market currencies.

"It's too early to wholeheartedly buy these currencies because of the chances of escalating trade tension between U.S. and its trading partners," said Omer Esiner, chief market analyst at Commonwealth Foreign Exchange in Washington.

North and South Korea, still technically at war but enjoying easing tension since the Winter Olympics in the South last month, will hold their first summit in more than a decade next month, South Korea said on Tuesday.

It also said North Korea is willing to hold talks with the United States on denuclearization and will suspend nuclear tests while those talks are underway. Trump said he saw "possible progress" but warned of "false hope" in these efforts

This offset worries about Trump's proposed levies, which have prompted protests from U.S. trading partners. Trump's fellow Republican lawmakers stepped up their calls for a pullback from the tariffs.

The dollar fell 0.458 points or 0.51 percent, against a group of currencies to 89.622.

It also touched its weakest level against the South Korean won since Jan. 25. It was last down 1.39 percent, at 1,061.69 won, putting it on track for its biggest one-day loss versus the won in almost a year.

Among higher-yielding currencies, the New Zealand dollar was up as much as 1.2 percent on the day and the Aussie up more than 1 percent.

Against the yen, the dollar had slipped as low as 105.86 yen, not far from the 16-month low it reached late last week on Trump's proposed tariffs. The yen was last up 0.03 percent, at 106.22 yen.

The euro rebounded to a two-week high of \$1.2414 on Tuesday after a selloff on Monday following elections in Italy and Germany.

Traders await for clues on monetary policies after the European Central Bank and Bank of Japan policy-makers meet on Thursday and Friday.

"The strength of the euro is starting to put pressure on the euro zone economy. This is putting pressure on the ECB," said Jack McIntyre, portfolio manager at Brandywine Global in Philadelphia.

Precious Metal – Daily Outlook**Gold rallies 1.4 pct as potential North Korea talks hurt dollar - Reuters News**

Gold prices rose more than 1 percent on Tuesday as the U.S. dollar slid after North Korea signaled that it is open to nuclear talks and investors worried about aggressive U.S. trade policy.

The greenback hit a two-week low as traders bet on riskier currencies and assets on news North and South Korea would hold their first summit in more than a decade and after the South said the North was willing to discuss denuclearization with the United States.

Spot gold gained 1.1 percent at \$1,334.79 per ounce by 1:33 p.m. EST (1833 GMT), while U.S. gold futures for April delivery settled up

\$15.30, or 1.2 percent, at \$1,335.20.

"As a result of the weaker dollar, gold - together with oil and industrial metals - has benefited from the North Korean news," said Saxo Bank's Ole Hansen. "This (is) despite the potential for lowering the geopolitical risk should we move towards a denuclearized Korean peninsula."

Gold prices rose 1.4 percent to \$1,338.49 per ounce, their highest since Feb. 26, surpassing a key level. "Gold broke through the 50-day moving average at \$1,329, and probably triggered some buy stops," said Phillip Streible, senior commodities strategist at RJO Futures.

Resistance is around the \$1,350-\$1,357 per ounce range, said Forex.com technical analyst Fawad Razaqzada. "A break above this zone is still required before we turn decidedly bullish on gold again."

Stocks fell in the United States and edged higher in Europe, but a global gauge of major equity markets was up, boosted by gains in Asia after stocks were battered Monday on concerns over a global trade war.

Worries that proposed tariffs by the Trump administration could touch off a trade war have eased somewhat. Still, uncertainty has helped to keep the dollar on the back foot and shored up interest in gold as a safe haven.

U.S. Treasury Secretary Steven Mnuchin said the Trump administration will try to keep any new steel and aluminum tariffs from hurting the economy.

Among other precious metals, silver increased 2.1 percent at \$16.77 an ounce after hitting \$16.86, a 2-1/2-week high. Platinum rose 0.8 percent at \$968.70 per ounce.

Palladium gained 0.4 percent at \$986.60 per ounce, earlier hitting a three-week low of \$974. The autocatalyst metal has run into strong support at \$975 an ounce, a key retracement of its Jan 2016-Jan 2018 rally, after falling more than 5 percent last week.

OIL – Daily Outlook**Oil prices edge up on weak dollar ahead of U.S. inventory data - Reuters News**

Oil prices rose on Tuesday, supported by a weaker dollar but U.S. crude's gains were limited by forecasts for a weekly rise in U.S. crude stockpiles.

Brent crude futures rose 25 cents to settle at \$65.79 a barrel, a 0.4 percent gain. Brent reached a low of \$65.30 a barrel and a six-day high of \$66.16 a barrel during the session.

West Texas Intermediate (WTI) crude futures rose 3 cents to settle at \$62.60 a barrel. WTI notched its own six-day high at \$63.28 a barrel.

Oil drew support as the U.S. dollar fell to its lowest in more than a week against a basket of currencies on news from South Korea that North Korea was willing to hold talks with the United States on denuclearization, and would suspend nuclear tests during any discussions.

South Korea also said it would hold a summit with North Korea for the first time in more than a decade.

The news led investors to sell the U.S. dollar and instead buy riskier assets such as commodities.

The dollar index last was down by half a percent. A weaker dollar makes dollar-denominated commodities cheaper for holders of other currencies.

"Initially, the market is looking at it as the positive side of this is the world will be doing business. It's one less risk on the table," said Phil Flynn, analyst at Price Futures Group in Chicago.

U.S. oil prices remained under pressure from expectations that weekly crude inventory data would show a second straight rise, according to a Reuters poll. The American Petroleum Institute will release trade inventory data at 4:30 p.m. EST (2130 GMT) on Tuesday. The U.S. government issues official inventory data on Wednesday.

Analysts polled by Reuters ahead of the data on average expect U.S. crude stocks rose by 2.7 million barrels in the week ended March 2.

While overall stocks have risen, inventories at the Cushing, Oklahoma, storage hub have declined for 10 consecutive weeks.

"Any larger-than-expected upswing in total stocks could easily be negated by another sharp decline in Cushing supplies that could drive renewed support into the WTI curve," Jim Ritterbusch, president of Chicago-based energy advisory firm Ritterbusch & Associates, said in a report.

Inventories are rising ahead of the seasonal maintenance period for refineries, when shutdowns mean they need less crude.

Adding to stockpiles, U.S. crude production has risen to more than 10 million barrels per day (bpd), overtaking top exporter Saudi Arabia.

Output hit a record 10.057 million bpd in November, according to the U.S. Department of Energy.

The continued growth of U.S. shale has been a theme at the CERAWEEK conference in Houston this week, said John Kilduff, partner at investment manager Again Capital in New York.

Brent had dipped closer to \$65 in earlier trading, pressured by the International Energy Agency's (IEA) warning on Monday that U.S. oil output was set to surge over the coming five years.

The prospect of OPEC and other producers, including Russia, maintaining crude output cuts in the face of a boom in U.S. shale production helped lift Brent back above \$65 a barrel this week.

April U.S. gasoline futures rose as much as 0.50 percent to hit \$1.9443 a gallon, the highest since Jan. 30, before retreating. [\(Source Reuters, Research – @her1en\)](#)
