GLOBAL MARKETS & ECONOMIES

GLOBAL MARKETS

U.S. & Global Markets – U.S. stocks jumped more than 1 percent on Friday, helped by Apple and other technology shares and by weaker-than-expected jobs data that eased interest rate worries, while U.S. oil prices hit their highest in more than three years.

Apple shares rose after Warren Buffett's Berkshire Hathaway raised its stake in the iPhone maker.

The U.S. Labor Department's report showed non-farm payrolls increased by 164,000 jobs last month, while the unemployment rate fell to 3.9 percent. However, wages edged up only 0.1 percent, easing concerns that inflation pressures were increasing.

That assuaged some investor worries about a potential pick-up in the pace of U.S. interest rate hikes from the Federal Reserve.

"The report might have taken some time to digest," said Shawn Cruz, manager of trader strategy at TD Ameritrade in Chicago. "The focus moved to the lack of wage inflation versus the drop in the unemployment rate. That's what's behind the rally today," he said.

The U.S. central bank on Wednesday left rates unchanged and said it expected annual inflation to run close to its "symmetric" 2 percent target over the medium term.

The Dow Jones Industrial Average rose 332.36 points, or 1.39 percent, to 24,262.51, the S&P 500 gained 33.69 points, or 1.28 percent, to 2,663.42 and the Nasdaq Composite added 121.47 points, or 1.71 percent, to 7,209.62.

The pan-European FTSEurofirst 300 index rose 0.66 percent and MSCI's gauge of stocks across the globe gained 0.75 percent.

U.S. crude oil prices rose to their highest in more than three years as global supplies remained tight and the market awaited news from Washington on possible new U.S. sanctions against Iran.

U.S. light crude settled up \$1.29 at \$69.72 a barrel. It touched a session high of \$69.97, its highest since November 2014. Brent crude oil settled up \$1.25 at \$74.87 a barrel. The global benchmark was set to end the week up 0.3 percent.

The U.S. dollar leaped to its highest levels this year against a basket of currencies despite disappointing U.S. employment data for April, before dropping back to trade little changed.

The dollar index rose 0.16 percent, with the euro down 0.21 percent to \$1.1962.

The dollar has gained as investors bet that the Fed will continue raising rates while other central banks, including the European Central Bank, will act more slowly.

While the Fed is seen raising interest rates at least two more times this year, expectations of policy tightening from the ECB and the Bank of England are receding.

That has driven the difference between German and U.S. government bond yields to near the highest in nearly three decades, with the short-dated and long-dated "transatlantic spread" at 305 and 240 basis points respectively.

Gold prices rose slightly as the U.S. dollar backed off its highs. Spot gold rose 0.2 percent to \$1,314.23 per ounce.

U.S. Treasury yields were little changed, supported by U.S. equities gains, after earlier dropping to multi-week lows.

In late afternoon trading, U.S. benchmark 10-year yields were flat at 2.945 percent from 2.946 percent late on Thursday.

GLOBAL ECONOMIES

Australia – Australia's central bank sees faster economic growth this year and next but doubts inflation will reach the mid-point of its target band until 2020, a strong signal rates are set to stay at record lows for a good while yet.

The Reserve Bank of Australia (RBA) expects growth in the A\$1.8 trillion economy to accelerate to 3.25 percent by the end of this year before peaking at 3.5 percent by June 2019.

The upbeat outlook is likely to be echoed by Treasurer Scott Morrison next week when he hands down, what is likely to be, his last annual budget before the next general election.

In a 65-page statement on monetary policy on Friday, the RBA left growth forecasts unchanged from its February outlook, while estimates for inflation and unemployment this year were nudged up a little. The jobless rate is seen lingering around current levels of 5.5 percent this year before easing to 5.25 percent by mid-2019 and staying there to 2020. The RBA had earlier predicted unemployment would slip to 5.25 percent by mid-2018. Underlying inflation is now seen at the floor of its 2-3 percent target band by mid-2018, but is still not expected to reach 2.25 percent until June 2020. Governor Philip Lowe pointed to subdued wages growth, at 2 percent, as a major factor weighing on inflation, but held out hope for a pick as the economy revives and the labour market tightens. "Overall, the Australian economy is progressing broadly on the track the Bank has been expecting for a while. The current accommodative stance of monetary policy has assisted this outcome," Lowe said. "If the economy continues to perform as expected, higher interest rates are likely to be appropriate at some time," he added.

"Notwithstanding this, the Board does not see a strong case for a near-term adjustment in the cash rate." Inflation has remained below the RBA's target since early 2015 and was the single biggest reason the central bank cut interest rates to an all-time low of 1.50 percent in August 2016. At its policy meeting this week, the RBA held rates for a 21st straight month and signalled a stable policy for some time yet.

China – A flurry of Chinese data in coming weeks is expected to show the world's second-largest economy remained strong in April, underpinned by a pick-up in industrial output and a rebound in exports despite rising trade tensions with the United States.

Solid growth in key areas of the economy would help reassure financial markets after generally softer than expected data in March suggested the economy may be losing momentum.

China's economy grew at a slightly faster-than-expected pace of 6.8 percent in the first quarter, but economists still expect growth to slow significantly by year-end.

Domestic growth risks posed by higher borrowing costs and a cooling property market are now being compounded by the country's deteriorating trade and economic relationship with the United States.

The two sides reached a consensus on some areas of their trade dispute in talks in Beijing late this week, but are still relatively far apart on other issues, Chinese state media reported.

U.S. President Donald Trump has threatened \$150 billion in new tariffs on Chinese imports, though none of the tariffs have been implemented yet.

China's exports likely rose 6.3 percent in April from a year earlier, according to a Reuters poll of 33 economists, bouncing back from a surprise 2.7 percent decline in March.

Import growth probably picked up slightly to 16 percent in April, producing a trade surplus of \$24.7 billion after a rare deficit the previous month.

Industrial output likely also kicked up a notch to 6.3 percent, after expanding at the slowest pace in seven months in March, the survey showed.

Growth rates for fixed asset investment and retail sales were likely little changed in April from March, economists said.

On the credit front, banks' new yuan loans likely totalled 1.1 trillion yuan (\$172.96 billion) in April, down only slightly from March.

Traditional bank lending has remained robust this year as the government continues a crackdown on riskier financing practices such as off-balance sheet and "shadow" lending.

Consumer inflation is expected to have eased for the second month in a row to 2.1 percent, while producer price inflation likely picked up after five months of declines. Prices of resources such as iron ore have surged in

recent weeks as falling stockpiles point to strong demand for building materials.

China's foreign exchange reserves likely fell slightly to \$3.133 trillion in April.

Foreign exchange data will be published on Monday, followed by trade on Tuesday and inflation on Thursday.

Industrial output, retail sales and investment data will be published on May 15, while bank lending and money supply data is expected to be released sometime from May 10-15.

Euro Zone – Euro zone business growth dimmed again in April but the picture remained relatively bright as new business stayed buoyant and firms managed to build up backlogs of work, a survey showed on Friday.

However, somewhat worrying for policymakers at the European Central Bank as they prepare to move away from an ultra-loose stance, inflationary pressures eased and the survey hinted at further easing in coming months.

IHS Markit's Final Composite Purchasing Managers' Index, seen as a good overall indicator of euro zone growth, fell to a 15-month low of 55.1 in April from March's 55.2.

That was a touch below a flash estimate but still well above the 50 mark separating growth from contraction. It was the lowest since January 2017.

Retailers had a disappointing March, official figures showed on Friday, with sales up a much slower-than-expected 0.1 percent as shoppers kept their hands in their pockets, adding to evidence the bloc's economic upswing is fading.

A March Reuters poll said growth had already peaked but another poll last month said the ECB would still end its stimulus this year and hike interest rates in 2019.

"It's continuing something we have seen - European growth has slowed markedly since the end of last year. The encouraging thing is there are signs the numbers are starting to stabilise," said James Nixon at Oxford Economics.

IHS Markit said the survey was indicative of the euro zone economy growing around 0.5-0.6 percent this quarter. A Reuters poll last month pegged growth at 0.6 percent, faster than the official flash first quarter estimate of 0.4 percent.

UK – Britain's markets watchdog is proposing to make it easier for homebuyers to find the best mortgage after finding that nearly a third of borrowers fail to find the cheapest deal.

The Financial Conduct Authority (FCA) on Friday published the interim findings of a review into Britain's trillion-pound mortgage market, launched in December 2016 to determine whether customers could obtain better deals and if links between industry players limit choice.

"We found that there are limitations to the effectiveness of the tools available to help consumers choose a mortgage," the interim report said.

"This makes it difficult for a significant minority (we estimate around 30 percent) of customers to find the cheapest suitable deal."

These consumers could have saved about 550 pounds (\$750) a year if they had bought the cheapest product. Some borrowers who could save money by switching provider either do not or cannot, it added.

The high cost of buying a home in Britain, exacerbated by a housing shortage, has put ownership out of reach for many people, and the government is under pressure to address the problem.

"For many, the market is working well with high levels of consumer engagement," Christopher Woolard, FCA executive director of strategy and competition, said in a statement.

"However, we believe that things could work better with more innovative tools to help consumers."

There are about 30,000 "mortgage prisoners" who took out interest-only loans before the financial crisis, but are now unable to switch to cheaper deals because of tougher rules.

The FCA said it wants to resolve this "legacy" issue and will explore solutions with industry and consumers.

UK Finance, Britain's main banking industry body, said the FCA showed that the market was working for the vast majority of borrowers.

"We note the FCA's points regarding perceived areas of weaknesses within the market, particularly around customers who currently may be unable to switch products," it said.

U.S. – U.S. job growth increased less than expected in April and the unemployment rate dropped to near a 17-1/2-year low of 3.9 percent as some jobless Americans left the labor force.

The Labor Department's closely watched employment report on Friday also showed wages barely rose last month, which could ease concerns that inflation pressures are rapidly building up, likely keeping the Federal Reserve on a gradual path of monetary policy tightening.

Nonfarm payrolls increased by 164,000 jobs last month, the Labor Department said on Friday. Data for March was revised up to show payrolls rising by 135,000 jobs instead of the previously reported 103,000.

That was still the fewest amount of jobs created in six months and followed an outsized gain of 324,000 in February.

While cold weather in March and April probably held back job growth, hiring is moderating as the labor market hits full employment. There has been an increase in reports of employers, especially in the construction and manufacturing sectors, struggling to find qualified workers.

The drop of two-tenths of a percentage point in the unemployment rate from 4.1 percent in March pushed it to a level last seen in December 2000 and within striking distance of the Fed's forecast of 3.8 percent by the end of this year. It was the first time in six months that the jobless rate dropped.

But 236,000 people left the labor force in April. The labor force participation rate, or the proportion of working-age Americans who have a job or are looking for one, fell to 62.8 percent last month from 62.9 percent in March.

Economists polled by Reuters had forecast payrolls rising by 192,000 jobs in April and the unemployment rate falling to 4.0 percent.

Longer-dated U.S. Treasury yields fell after the data. The dollar pared losses against a basket of currencies and U.S. stock index futures trimmed losses. [\(Source Reuters, Research – @her1en\)](#)

ASIAN STOCK INDEX

The Japanese market remains closed for Greenery Day.

South Korea's KOSPI stock index fell 1 percent on Friday. The Korean won ended slightly weaker, while bond yields rose.

At 06:32 GMT, the KOSPI was down 25.87 points, or 1.04 percent, at 2,461.38. U.S.-China trade tensions as well as worries over faster-than-expected rate hike from the Federal Reserve continued to weigh on investor sentiment.

Samsung Electronics, which resumed trading after a three-day halt due to stock split, closed 2.1 percent lower.

The benchmark stock index fell 1.2 percent for the week, its biggest weekly percentage loss since late March.

The won was quoted at 1,077.2 per dollar on the onshore settlement platform, 0.08 percent weaker than its previous close at 1,076.3. The local currency barely moved on a weekly basis.

In offshore trading, the won was quoted at 1,075.83 per U.S. dollar, down 0.12 percent from the previous day, while in one-year non-deliverable forwards it was being asked at 1,059.87 per dollar.

MSCI's broadest index of Asia-Pacific shares outside Japan was down 0.51 percent, after U.S. stocks ended the previous session with mild losses

The KOSPI is up around 0.8 percent so far this year, and up by 0.09 percent in the previous 30 days.

The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won.

The trading volume during the session on the KOSPI index was 599,881,000 shares and, of the total traded issues of 881, the number of advancing shares was 437.

In money and debt markets, June futures on three-year treasury bonds fell 0.08 points to 107.53.

The Korean 3-month Certificate of Deposit benchmark rate was quoted at 1.65 percent, while the benchmark 3-year Korean treasury bond yielded 2.281 percent, higher than the previous day's 2.25 percent.

Hong Kong shares fell on Friday as investors weighed the outcome of the Sino-U.S. trade talks, released during the final minutes of trading.

The Hang Seng index fell 1.3 percent, to 29,926.50, while the China Enterprises Index lost 1.1 percent, to 11,890.62 points.

China and the United States have reached a consensus on some areas of their trade dispute but still have relatively big disagreements on others, China's official Xinhua news agency said in a microblog post on Friday.

The sub-index of the Hang Seng tracking energy shares dipped 0.7 percent while the IT sector dipped 0.65 percent, the financial sector was 1.8 percent lower and property sector dipped 0.7 percent.

The top gainer on Hang Seng was Wharf Real Estate Investment Company Ltd up 2.83 percent, while the biggest loser was HSBC Holdings PLC which fell 3.54 percent.

China's main Shanghai Composite index closed down 0.32 percent at 3,091.03 points while its blue-chip CSI300 index ended down 0.49 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.66 percent while Japan's Nikkei index closed down 0.16 percent.

China stocks ended lower on Friday, capping a listless week, as investors anxiously await the outcome of the Sino-U.S. trade talks being held in Beijing.

The blue-chip CSI300 index ended down 0.5 percent at 3,774.60, while the Shanghai Composite Index closed 0.3 percent lower at 3,091.03 points.

For the week, the CSI300 index ended 0.5 percent higher, while the Shanghai Composite Index closed up 0.3 percent.

The blue-chip CSI300 index was down, with its financial sector sub-index closed 0.81 percent lower, the consumer staples sector ended down 0.73 percent, the real estate index ended down 0.25 percent and healthcare sub-index closed 1.09 percent higher.

The smaller Shenzhen index ended down 0.21 percent and the start-up board ChiNext Composite index was weaker by 0.65 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.54 percent, while Japan's Nikkei index closed down 0.16 percent.

At 0722 GMT, the yuan was quoted at 6.3527 per U.S. dollar, 0.04 percent weaker than previous close of 6.35.

So far this year, the Shanghai stock index is down 6.5 percent, the CSI300 has fallen 6.4 percent while China's H-share index listed in Hong Kong is up 1.8 percent. Shanghai stocks have risen 0.29 percent this month.

About 11.87 billion shares were traded on the Shanghai exchange, roughly 75.6 percent of the market's 30-day moving average of 15.70 billion shares a day. The volume in the previous trading session was 14.00 billion.

As of 0723 GMT, China's A-shares were trading at a premium of 22.76 percent over the Hong Kong-listed H-shares.

The Shanghai stock index is below its 50-day moving average and below its 200-day moving average.

The price-to-earnings ratio of the Shanghai index was 13.33 as of the last full trading day, while the dividend yield was 2.3 percent.

CURRENCIES – Daily Outlook

Dollar hits 2018 high despite weaker jobs data - Reuters News

The U.S. dollar leaped to its highest levels this year against a basket of currencies on Friday despite disappointing U.S. employment data for April, before dropping back to trade little changed.

The U.S. economy added fewer jobs than expected and although the unemployment rate dropped to near a 17-1/2-year low of 3.9 percent, this was because some jobless Americans left the labor force.

Average hourly earnings rose 4 cents, or 0.1 percent, last month after gaining 0.2 percent in March. That left the annual increase in average hourly earnings at 2.6 percent.

"It is probably a pause, but it is nothing to stop the market," said Steven Englander, head of research and strategy at Rafiki Capital in New York.

The dollar index jumped to 92.90, the highest level since Dec. 28, before falling back to 92.566, near where it was trading before the data was released. The greenback also broke above parity with the Swiss franc, rising as high as 1.0022 francs.

The dollar has gained as investors bet that the Federal Reserve will continue raising rates while other central banks, including the European Central Bank (ECB), will act more slowly.

"The story in the last few days has been the disappointment over the ECB and the UK to start raising interest rates in the wake of the Fed, and unless we see data picking up meaningfully, the dollar will outperform in the coming weeks," said Gavin Friend, senior markets strategist at NAB in London.

The sharp recent rise in the dollar - it broke above a 200-day moving average this week for the first time in a year - took hedge funds and other investors by surprise. They had built up record short bets on the dollar and were forced to cover some of those positions, lifting the greenback even more.

Erik Nelson, a currency strategist at Wells Fargo in New York, sees further upside in the greenback as likely limited, however, saying that pessimism over other economies may be overdone.

"I think the economies are strong enough in those countries to keep central banks on track to keep normalizing monetary policy," Nelson said.

San Francisco Fed President John Williams said on Friday that he does not see any abrupt rise in inflation happening even as price gains have risen towards the central bank's target.

Precious Metal – *Daily Outlook***Gold edges up as dollar retreats from day's highs - Reuters News**

Gold prices rose slightly on Friday as the U.S. dollar backed off its highs, initially rising after U.S. jobs data was weaker than expected. However the data was still strong enough to support the case for more interest rate increases.

Spot gold rose 0.2 percent to \$1,314.23 per ounce by 3:09 p.m. EDT (1909 GMT), heading for a third consecutive weekly decline, while U.S. gold futures for June delivery settled up \$2, or 0.2 percent, at \$1,314.70.

The dollar index backed off its highs, but it still remained in positive territory against a currency basket. Investors earlier bet that the Federal Reserve will continue raising rates while other central banks will act more slowly.

A stronger dollar makes commodities priced in the greenback more expensive for buyers using other currencies.

"The dollar's off the high pretty substantially, and I think that's lending a helping hand to gold," said John Caruso, senior market strategist at RJO Futures in Chicago.

"Jobs number was very underwhelming today, and I think gold is trying to find some footing to potentially find some support to the upside."

The U.S. employment data showed U.S. job growth increased less than expected in April and the unemployment rate dropped to near a 17-1/2 year low of 3.9 percent.

"This is a bit disappointing on the earnings front after the employment cost index we received last week. Still this is not enough for the Fed to pause. They will still hike in the June meeting," said Collin Martin, fixed income strategist at the Schwab Center For Financial Research in New York.

Rising interest rates make gold less attractive to investors because it does not pay interest.

Next week, gold is likely to be supported as investors worry about a possible U.S. withdrawal from the Iran nuclear accord, said Commerzbank analyst Daniel Briesemann.

If Washington decides to stick with the pact by a May 12 deadline, gold could be pressured, he added.

"Even if gold dips below \$1,300, the past has shown that there is buying interest below that level, so we don't expect gold to drop significantly for the moment," Briesemann said.

Meanwhile, spot silver rose 0.6 percent to \$16.50 an ounce, ending the week barely changed.

Platinum gained 0.9 percent at \$908 an ounce and was on track for a third weekly fall to end the week about 0.3 percent lower.

Palladium rose 0.2 percent at \$963.72 per ounce, heading for a nearly 1 percent weekly drop.

OIL – Daily Outlook

Oil hits highest since Nov. 2014 as Iran tensions mount - Reuters News

Oil prices rose about 2 percent on Friday, with U.S. crude hitting its highest in more than three years, as global supplies remained tight and the market awaited news from Washington on possible new U.S. sanctions against Iran.

Bob Yawger, director at Mizuho, noted the looming May 12 deadline that U.S. President Donald Trump had set for Europeans to "fix" the deal with Iran over its nuclear program or he would refuse to extend U.S. sanctions relief for the oil-producing Islamic Republic.

"You have the May 12 Iran and Trump headlines that support the market," he said.

U.S. light crude settled up \$1.29 at \$69.72 a barrel. It touched a session peak of \$69.97 for the first time

since November 2014. It was on track to gain just over 2.3 percent on the week.

Brent crude oil settled up \$1.25 at \$74.87 a barrel. The global benchmark was set to end the week up 0.3 percent.

Iran's foreign minister said on Thursday that U.S. demands to change its 2015 agreement with world powers were unacceptable. Trump has said European allies must rectify "terrible flaws" in the international accord by May 12.

European powers want to hand Trump a plan to save the Iran nuclear deal next week. But they have also started work on protecting EU-Iranian business ties if Trump makes good on his threat to withdraw.

Iran resumed its role as a major oil exporter in January 2016 when international sanctions were lifted in return for curbs on Tehran's nuclear program.

ANZ analysts Daniel Hynes and Soni Kumari said Brent could reach \$80 a barrel by the end of this year, attributing recent strength to rising geopolitical risks and tighter global supply.

"We expect the market to tighten even further in second half 2018," they wrote in a note to clients.

Still, growing U.S. crude supplies have been capping price gains.

Surging production in the Permian shale basin is outpacing pipeline capacity, while local refining issues have exacerbated oversupply.

The United States now produces more crude oil than top exporter Saudi Arabia, and two weeks of U.S. inventory builds have limited the oil market's upside. U.S. energy companies added oil rigs for a fifth straight week, with higher crude prices boosting profits and pushing nationwide production to record highs.

Drillers added nine oil rigs in the week to May 4, bringing the total to 834, the highest since March 2015, General Electric Co's Baker Hughes energy services firm said.

Hedge funds and other money managers cut their net long U.S. crude futures and options positions in the week to May 1, the U.S. Commodity Futures Trading Commission (CFTC) said on Friday.
