GLOBAL MARKETS

- Crude oil prices rose more than 3 percent on Wednesday after U.S. President Donald Trump's decision to withdraw from a nuclear accord with Iran, a move that helped lift equity markets as Exxon Mobil, Chevron and other oil majors rallied.

GLOBAL ECONOMIES

- Australia's new budget relies on optimistic revenue assumptions, rating agency Fitch said on Wednesday, creating some "downside risk" for the government's target to produce a surplus one year earlier than anticipated.
- China's banking and insurance regulator will soon publish detailed rules on banks' wealth management products (WMPs) as part of Beijing's effort to curb risks in the financial sector, three sources familiar with the matter told Reuters.
- Investors are pushing back expectations for a rise in euro zone interest rates further into 2019 against a backdrop of soft economic data and disappointing inflation numbers, money market pricing suggests.
- The Bank of England will wait until August before raising interest rates, according to a Reuters poll in which nearly all economists pushed back previous expectations of a hike on Thursday.
- U.S. producer prices barely rose in April after strong gains in the first quarter, held down by a moderation in the cost of both goods and services, which could ease fears that inflation pressures were rapidly building up.
- The value of Canadian building permits rose more than expected in March on increased plans to build apartment buildings in the provinces of Quebec and British Columbia, data from Statistics Canada showed on Wednesday.

GLOBAL MARKETS & ECONOMIES

GLOBAL MARKETS

U.S. & Global Markets – Crude oil prices rose more than 3 percent on Wednesday after U.S. President Donald Trump's decision to withdraw from a nuclear accord with Iran, a move that helped lift equity markets as Exxon Mobil, Chevron and other oil majors rallied.

Contracts for Brent, the global crude benchmark, and its U.S. counterpart climbed to highs last seen in November 2014 after Trump on Tuesday abandoned the deal and announced the "highest level" of sanctions against Iran.

Trump's action raises the risk of conflict in the Middle East and casts uncertainty over oil supplies in an already tight market.

U.S. crude rose \$2.08 to settle at \$71.14 per barrel and Brent settled up \$2.36 at \$77.21.

The energy sector in equity markets rallied, helping lift European stocks, a gauge of world equity performance and the broad U.S. market.

"It's the clear leader today. It's overwhelming almost all the other sectors in terms of its impact on today's market action," said Michael Arone, chief investment strategist at State Street Global Advisors in Boston.

Exxon Mobil closed up 2.36 percent, Chevron gained 1.70 percent, Royal Dutch Shell added 3.38 percent and BP advanced 3.92 percent.

While crude oil prices have rallied over the past 12 months, energy stocks have basically gone nowhere, which helped their gains on Wednesday, Arone said.

U.S. crude since the end of March 2017 surged 46 percent, while the S&P energy sector rose 9.2 percent over that period. So far this quarter the energy index is up 12.5 percent.

"Now we're starting to see that gap close, so this could be a bit of a short-term rally for the energy sector," he said.

MSCI's gauge of equity performance in 47 countries rose 0.61 percent. Exxon and BP were the second- and third-largest contributors earlier in the session. Technology stars Alphabet and Facebook later led stocks higher.

Energy added the most points to the pan-European FTSEurofirst 300 index of regional stocks, which closed up 0.74 percent, led by Royal Dutch Shell and BP. Total was the fifth-largest gainer.

On Wall Street the technology sector led stocks higher, but the S&P energy sector was the biggest percentage gainer at 2.03 percent.

The Dow Jones Industrial Average rose 182.33 points, or 0.75 percent, to 24,542.54. The S&P 500 gained 25.87 points, or 0.97 percent, to 2,697.79 and the Nasdaq Composite added 73.00 points, or 1 percent, to 7,339.91.

Equities have recently traded in a range on concerns about U.S.-China trade negotiations, differing views between the Federal Reserve and investors over inflation and the economy, and the notion that earnings and growth have peaked, Arone said.

"Those things certainly have the market in a bit of a sideways pattern," he said.

The dollar fell from its strongest levels in 2018 against a basket of currencies because of mild profit-taking, but the greenback was expected to resume its rise as a result of solid U.S. economic growth and further monetary tightening by the Fed.

A bounce in the euro, which dropped to a low for the year in early trading, helped weaken the dollar.

"There's a little exhaustion with the long-dollar trade, but I don't think we've reached the end of it yet," said Ilya Gofshhteyn, FX and global macro strategist at Standard Chartered Bank in New York.

The dollar index was little changed, with the euro up 0.1 percent to \$1.1850. The Japanese yen weakened 0.54 percent versus the greenback to 109.70 per dollar.

The yield on the benchmark U.S. Treasury note rose back above 3 percent, pushing prices down 10/32.

In Europe, the gap between Italian and German borrowing costs hit its widest in nearly six weeks on the possibility a coalition of Italian anti-establishment parties could come to power.

The Italy/Germany 10-year government bond yield spread widened five basis points immediately after news that 5-Star and the League had said they were holding last-minute talks to try to clinch a coalition deal.

GLOBAL ECONOMIES

Australia – Australia's new budget relies on optimistic revenue assumptions, rating agency Fitch said on Wednesday, creating some "downside risk" for the government's target to produce a surplus one year earlier than anticipated.

Prime Minister Malcolm Turnbull's centre-right government unveiled its annual budget on Tuesday, with personal tax cuts and a pledge to deliver a surplus by 2019/20, ending almost a decade of deficits, as its centre-piece item.

The three major rating agencies have affirmed Australia's prized triple-A sovereign rating.

Standard & Poor's Global said the budget showed a commitment to fiscal prudence but there were "significant" risks to the fiscal outlook, including trade tensions and strains in emerging markets.

Moody's Investors Service said the 2018/19 is a positive step in improving Australia's fiscal outlook, provided underlying assumptions hold.

On Wednesday, Fitch said the projected 2019-/20 surplus was no sure thing.

"The reliance on improved revenues, rather than policy proposals, to narrow the deficit poses some downside risk to the achievement of the government's surplus target," Jeremy Zook, associate director at Fitch, said in a statement.

Australia's finances are forecast to hit a surplus of A\$2.2 billion (\$1.6 billion) in 2019/20, increasing to A\$11 billion in 2020/21 and A\$16.6 billion in 2021/22.

The forecast surpluses rely on an anticipated windfall from corporate taxes and the fruits of a crackdown on black market economic activity and multinational tax avoidance.

The budget is widely viewed as the unofficial campaign kick-off for the federal election due in the first half of 2019, which means the government can promote its economic credentials on the hustings.

Political analyst David Black said previous governments have had success - and come unstuck - on their surplus promises.

"Politicians sell it as an indicator that the economic situation is under control," he said.

China – China's banking and insurance regulator will soon publish detailed rules on banks' wealth management products (WMPs) as part of Beijing's effort to curb risks in the financial sector, three sources familiar with the matter told Reuters.

The rules, which would tighten banks' risk control of the country's \$4.63 trillion WMPs, follow the long-awaited publication by the central bank in April of broad new regulations on the \$15 trillion asset management industry that are scheduled to kick-in after 2020.

China is in the third year of an ambitious campaign to reduce risks in its financial system stemming from a rapid build-up in debt, which the Bank for International Settlements has warned could lead to a banking crisis.

The country's regulators are scrambling to keep up with fast-growing financial innovation as lenders and investors scrounge for higher returns while borrowers, unable to secure bank credit, turn to other means for funding, creating potential systemic risk.

In the forthcoming rules, the China Banking and Insurance Regulatory Commission (CBIRC) is likely to adjust the limit for exposure of bank wealth management products to so-called non-standard investments, known widely as "shadow banking" products, said one of the sources.

Currently, such investments by banks cannot exceed 35 percent of the outstanding amount of their wealth management products or 4 percent of their total assets.

By end-2017, 562 banks had 29.54 trillion yuan (\$4.63 trillion) in outstanding WMPs, according to official data.

Banks are expected to come up with proposals to reduce the size of their outstanding shadow banking investments while not suddenly choking off credit to borrowers, the three sources said, and face quarterly reviews.

The April rules from the central bank were slated to kick in after 2020, but the banking regulator has informed banks that asset management products backed by newly-invested assets must comply with the rules immediately, the sources said.

All three sources declined to be named because the plan has not yet been made public.

The banking and insurance regulator did not immediately respond to requests for a comment.

Structured deposits, a relatively new way for banks to raise funds from retail investors, have gained popularity after banks were told to stop guaranteeing fixed returns for wealth management products.

The regulator had voiced concern that some banks, facing pressure on the liability side, were not prepared to handle the risks associated with structured deposits, the sources said.

Structured deposits are categorised as liabilities on banks' balance sheets, and have effectively replaced guaranteed-return WMPs. The products offer some principal protection and a chance to book high returns.

Euro Zone – Investors are pushing back expectations for a rise in euro zone interest rates further into 2019 against a backdrop of soft economic data and disappointing inflation numbers, money market pricing suggests.

The European Central Bank will not easily retreat from plans to end its bond purchases this year, even though growth is slowing, but it may push out expectations for interest rate increases to maintain the flow of money and support confidence.

Investors, it appears, are already moving in that direction with their views on the rate trajectory.

The difference between the overnight bank-to-bank interest rate for the euro zone (Eonia) and forward Eonia rates dated for the ECB's June 2019 meeting was around 7.5 basis points on Wednesday, down from almost 10 basis points just two weeks ago.

Analysts say that means investors are pricing in around a 75 percent chance of a 10 basis point increase in the ECB's deposit rate - the minimum it is likely to increase - from minus 0.4 percent currently.

A rate hike by July 2019 is fully priced in by markets.

That contrasts with three more rate hikes expected from the U.S. Federal Reserve over the remainder of the year after a cumulative 150 basis points in hikes since December 2015.

The euro zone economy has expanded for 20 straight quarters, but a string of recent indicators suggests that growth has slowed in early 2018, with the threat of a global trade war further clouding the outlook.

Data last week showed inflation in the bloc slowed unexpectedly to 1.2 percent in April - remaining well below the ECB's near 2 percent target.

A key market gauge of long-term inflation expectations, the five-year, five-year forward, has pulled back to around 1.70 percent from eight-week highs hit in April.

"The reason we've had such a move in rate-hike expectations is that the inflation numbers were the cheery on the cake of a recent slew of soft data," said Richard McGuire, the head of rates at Rabobank in London.

"The ECB will err on the side of caution, which is why you will see rate-hike expectations pushed further into the future."

Market pricing for the ECB's first rate rise of this economic cycle have had a rollercoaster ride in the space of a few months.

In January, strong data and hawkish comments from some central bank officials prompted investors to bet that the ECB could hike interest rates as early as year-end.

Those bets were slowly unwound, pushing out to the first quarter of 2019, with the consensus later building around mid-2019 as economic data disappointed.

A weakening in the euro also reflects a curtailing of investors' rate-hike expectations. The single currency slid to a new 2018 low on Wednesday just above \$1.18.

"Short term interest rates are predicting deposit rates to hit 0 percent by the end of 2019 - that is an unsustainable scenario if growth doesn't pick up soon," said Rishi Mishra, interest rates strategist at Futures First Info Services.

UK – The Bank of England will wait until August before raising interest rates, according to a Reuters poll in which nearly all economists pushed back previous expectations of a hike on Thursday.

That dramatic turnaround from a poll taken just a few weeks ago was triggered by dovish comments from BoE Governor Mark Carney, together with a slew of downbeat data suggesting Britain's economy is barely growing.

All but three of the 62 economists polled from May 3-8 expect no move from 0.5 percent this month - a complete reversal from an April 18 poll when 69 of 76 economists had a 25 basis point increase pencilled in for May 10.

Just under a third of economists polled now expect no change in August either.

Financial markets have made a similar about-face.

At the start of April they were pricing in a 90 percent chance of a hike, but that has plummeted to around 10 percent. Sterling has plunged from above \$1.43 in mid-April to around \$1.35 now.

"Following dovish comments from Governor Mark Carney on April 19, softening activity data, a downside surprise on inflation and GDP growth of just 0.1 percent quarter-on-quarter in Q1, the probability has fallen," Simon Wells at HSBC told clients when changing his forecast.

Bank Rate will instead rise to 0.75 percent in August, medians in the poll said, and then to 1.0 percent in the second quarter of 2019, just after Britain is scheduled to leave the European Union.

"We expect the data to improve in the coming months, allowing the Monetary Policy Committee to hike Bank Rate in August. But we acknowledge that the risks now look skewed to the downside," noted Andrew Wishart at Capital Economics.

Some of the economists polled have no rate hike this year or in their forecast horizon.

The BoE also publishes its quarterly Inflation Report forecasts on Thursday. Based on experience, economists and traders tend to view the BoE as more likely to change policy during months when it has forecasts to explain its decisions.

But Britain's economy has fallen from top to bottom of the list of G7 countries in terms of growth rate, and uncertainties over what sort of deal Britain strikes with the EU before it leaves in March next year has left consumers, investors and economists wary.

Signals that Britain's economy is slowing suggest "unreliable boyfriend" Carney - whose recent comments up-ended expectations the BoE would raise rates this month - may just be in touch with his data-sensitive side.

The bank governor's guidance on the path for interest rates has repeatedly been knocked off course by surprises in the economy, hence the accusation of unreliability from a lawmaker.

"It all boils down to how the Committee sees the recent weakness in British figures like GDP and inflation," said Andreas Wallstrom at Nordea, who added he was not super confident in his call for an increase this week.

"The signals from the Bank if you go back to before those outcomes was quite clear that they had the intention to hike. It is not set in stone."

Inflation, while still considerably above target, has fallen faster than the Bank expected and wage growth - which has long underpinned the BoE's view that rates will need to rise gradually over the next few years - dropped to less than 1 percent annualised in the three months to February.

"The MPC's inflation forecast, then, likely will signal that it believes it doesn't need to rush, but that it still expects to embark on a gradual tightening over the next three years," said Samuel Tombs at Pantheon Macroeconomics.

U.S. – U.S. producer prices barely rose in April after strong gains in the first quarter, held down by a moderation in the cost of both goods and

services, which could ease fears that inflation pressures were rapidly building up.

The slowdown in wholesale price growth reported by the Labor Department on Wednesday is likely temporary as manufacturers have been reporting paying more for raw materials. Economists also expect oil prices to surge after President Donald Trump on Tuesday pulled the United States out of an international nuclear deal with Iran.

"Inflation isn't breaking out, although with Trump exiting the Iran nuclear deal, higher energy prices could kick-start a new round of inflation at the producer level," said Chris Rupkey, chief economist at MUFG in New York.

The Labor Department said on Wednesday its producer price index for final demand edged up 0.1 percent last month after increasing 0.3 percent in March. That lowered the year-on-year increase in the PPI to 2.6 percent from 3.0 percent in March.

Economists polled by Reuters had forecast the PPI gaining 0.2 percent last month and rising 2.8 percent from a year ago.

A key gauge of underlying producer price pressures that excludes food, energy and trade services also nudged up 0.1 percent last month. The so-called core PPI had increased by 0.4 percent in each of the past three months.

In the 12 months through April, the core PPI rose 2.5 percent after jumping 2.9 percent in March. Core goods prices increased 0.3 percent in April, matching March's gain.

Stocks on Wall Street were trading higher, with shares of energy companies getting a boost from surging oil prices after the United States exited the Iran nuclear deal and imposed the 'highest level' of sanctions against the OPEC member. Oil prices rose more than 2.5 percent. U.S. Treasury yields rose while the dollar fell against a basket of currencies.

Canada – The value of Canadian building permits rose more than expected in March on increased plans to build apartment buildings in the provinces of Quebec and British Columbia, data from Statistics Canada showed on Wednesday.

The 3.1-percent increase topped economists' forecasts for a gain of 2.0 percent, while February was revised slightly downward to a decline of 2.8 percent from an initially reported 2.6 percent drop.

March residential building permits rose 2.3 percent, driven by a 12.2 percent jump in the multi-family sector on higher construction intentions for apartments. Quebec and British Columbia saw the biggest increases, as builders also planned row houses.

But building plans for single-family homes fell 7.9 percent as Toronto tumbled for the second month in a row. The Ontario government took a number of steps to rein in the hot Toronto housing market last year.

Permits for non-residential structures rose 4.5 percent, recovering some of the previous month's decline as builders planned more commercial buildings. *(Source Reuters, Research – @her1en)*

ASIAN STOCK INDEX

Japanese stocks fell on Wednesday as global tensions flared after President Donald Trump pulled the United States out of an international nuclear deal with Iran, but Toyota rose after releasing earnings and announcing a share buyback.

The Nikkei ended down 0.4 percent at 22,408.88 points.

Trump's move raised the risk of conflict in the Middle East, upsetting European allies and casting uncertainty over global oil supplies, which lifted shares of mining firm Inpex Corp by 1 percent.

"The short-term impact on the stock market may be limited, but worries over a mid-to-long term impact could lead to a risk-off stance from investors," said Norihiro Fujito, senior investment strategist at Mitsubishi UFJ Morgan Stanley Securities.

"If oil prices stay high, costs will rise and that will trigger price increase."

Toyota Motor Corp, which released its full-year result during trading hours for the first time, soared 3.8 percent to a three-month high of 7,424 yen after it posted an operating profit of 2.4 trillion yen (\$21.90 billion) in the year just ended, outpacing rivals Volkswagen AG and Daimler AG for the fifth straight year.

Toyota forecast a 4.2 percent slide in operating profit to 2.3 trillion yen for the current year, hit by a stronger yen but still above market expectations.

Toyota also said that it would buy back up to 55 million of its own shares, or 1.85 percent outstanding, worth up to 300 billion yen.

Takeda Pharmaceutical fell 2.4 percent after it said on Tuesday it had agreed to buy London-listed Shire for (\$62 billion), the biggest yet in a wave of deals sweeping the drugs industry.

South Korea's KOSPI stock index ended lower, while the Korean won hit a two-week closing low as most riskier assets were affected after U.S. President Donald Trump pulled out of an international nuclear deal with Iran.

At 0632 GMT, the KOSPI ended down 5.83 points or 0.24 percent at 2,443.98.

The won was quoted at 1,080.9 per dollar on the onshore settlement platform, 0.41 percent weaker than its previous close at 1,076.5. The currency marked its weakest closing since April 26.

In offshore trading, the won was quoted at 1,079.7 per U.S. dollar, down 0.21 percent from the previous day, while in one-year non-deliverable forwards it was being asked at 1,064.05 per dollar.

MSCI's broadest index of Asia-Pacific shares outside Japan was down 0.18 percent, after U.S. stocks ended the previous session with losses Japanese stocks weakened 0.44 percent.

The KOSPI is down around 0.7 percent so far this year, and climbed 1.37 percent in the previous 30 days.

The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won.

In money and debt markets, June futures on three-year treasury bonds dropped 0.03 points to 107.45.

The Korean 3-month Certificate of Deposit benchmark rate was quoted at 1.65 percent, while the benchmark 3-year Korean treasury bond yielded 2.308 percent, lower than the previous day's 2.31 percent.

Hong Kong shares rose on Wednesday, led by energy stocks after U.S. President Donald Trump pulled out of the Iran nuclear deal, sparking fears about global oil supplies, and pushing oil prices higher.

The Hang Seng index rose 0.4 percent to 30,536.14, while the China Enterprises Index gained 0.3 percent to 12,185.44.

The sub-index of the Hang Seng tracking energy shares jumped 2.3 percent, while the IT sector rose 0.9 percent, the financial sector was 0.25 percent higher and property sector rose 0.7 percent.

The top gainer on the Hang Seng was PetroChina Co Ltd up 4.39 percent, while the biggest loser was China Resources Power Holdings Co Ltd which was down 2.23 percent.

China's main Shanghai Composite index closed down 0.08 percent at 3,161.4976 while its blue-chip CSI300 index ended down 0.18 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.04 percent, while Japan's Nikkei index closed down 0.44 percent.

China stocks ended marginally lower on Wednesday as losses in financial and property shares outweighed gains in energy stocks.

The blue-chip CSI300 index fell 0.2 percent to 3,871.62 while the Shanghai Composite Index dipped 0.1 percent to 3,159.15 points.

The blue-chip CSI300 index was down 0.18 percent, with its financial sector sub-index falling 0.35 percent and the consumer staples sector shedding 0.41 percent while the real estate index was down 0.95 percent and healthcare sub-index was up 0.26 percent.

The smaller Shenzhen index ended down 0.09 percent and the start-up board ChiNext Composite index was weaker by 0.06 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.16 percent while Japan's Nikkei index closed down 0.44 percent.

At 07:07 GMT, the yuan was quoted at 6.3756 per U.S. dollar, 0.13 percent weaker than the previous close of 6.3671.

The Shanghai stock index is below its 50-day moving average and below its 200-day moving average.

The price-to-earnings ratio of the Shanghai index was 13.59 as of the last full trading day while the dividend yield was 2.2 percent.

CURRENCIES – Daily Outlook

Dollar dips from 2018 high; seen as temporary pause - Reuters News

The dollar fell on Wednesday from its strongest levels in 2018 against a basket of currencies due to mild profit-taking, but is expected to resume its rise on solid U.S. economic growth and more interest rate increases anticipated from the Federal Reserve.

The weaker greenback stemmed from a bounce in the euro, which hit a fresh year-to-date low in earlier trading.

"There's a little exhaustion with the long-dollar trade, but I don't think we've reached the end of it yet," said Ilya GofshTEyn, FX and global macro strategist at Standard Chartered Bank in New York.

Concerns about the U.S. exit from an international nuclear deal with Iran had also supported the dollar in early Asian trading. For now, traders have put the issue on the backburner until any further development, analysts said.

"The market has kind of moved past this," said Boris Schlossberg, managing director of FX strategy at BK Asset Management in New York.

The index that tracks the dollar against six currencies slipped 0.1 percent to 93.028 after touching a 2018 peak of 93.416 earlier.

The three-week long rally for the U.S. currency, in which it has reversed several months of weakness, has caused the unwinding of popular long bets on emerging market and G10 currencies.

The euro hit a year-to-date low of 1.1821 earlier on Wednesday before paring gains to \$1.1875, for a 0.1 percent rise on the day, according to Reuters data.

The dollar climbed 0.5 percent to 109.68 yen and edged up 0.3 percent to 1.0044 Swiss franc on fading worries about U.S. President Donald Trump's decision to pull the United States out of the Iran nuclear deal.

The dollar's pullback was moderated by higher U.S. yields underpinned by expectations of rising U.S. inflation and a swelling U.S. budget deficit.

Low inflation remains a concern for major central banks.

On Wednesday, the U.S. government's producer price index grew by a slim 0.1 percent in April, less than what analysts had expected.

Swedish inflation edged down to 1.9 percent on a year-over-year basis last month, just below the Riksbank's 2 percent goal.

Nevertheless, the Swedish crown, one of the worst performing G10 currencies in 2018, rallied in the wake of the softer inflation reading. It jumped 1.4 percent versus the dollar and the euro.

Elsewhere, the Malaysian ringgit one-month deliverable forward fell to its lowest against the dollar as that country's opposition party claimed it had won enough parliament seats to form the next government.

Precious Metal – *Daily Outlook***Gold slips; Trump Iran move fails to spark safe-haven buying - Reuters News**

Gold prices dipped on Wednesday as safe-haven buying failed to kick in after the United States withdrew from the Iranian nuclear accord, and as rising U.S. Treasury yields added pressure.

Dismayed European allies sought to salvage the international nuclear pact with Iran after U.S. President Donald Trump pulled Washington out of the landmark accord, reached in 2015 before he took office.

"The fact that the cat is out of the bag and we have the announcement (on Iran) - that

has removed some of the geopolitical support for gold," said Ole Hansen, head of commodity strategy at Saxo Bank in Copenhagen.

Gold prices often rise during times of political turmoil, as bullion is widely considered a safe-haven asset alongside the dollar and the Japanese yen.

Also weighing on gold, geopolitical tensions in the Korean peninsula eased further as North Korea freed three American detainees ahead of talks between Trump and North Korea leader Kim Jong Un.

Spot gold lost 0.1 percent at \$1,312.89 an ounce by 1:33 p.m. EDT (1733 GMT), after touching a one-week low of \$1,304.11.

U.S. gold futures for June delivery settled down 70 cents, or 0.05 percent, at \$1,313 per ounce.

The dollar index rose to a 2018 peak, then went into negative territory after U.S. producer prices rose less than expected.

Yields on the benchmark 10-year Treasury note breached 3 percent. A series of U.S. bond auctions this week could boost yields further, which could pressure gold enough to challenge the \$1,300 support area, Hansen added.

The prospect of more U.S. interest rate increases will also weigh on gold, Standard Chartered analyst Suki Cooper said.

"We continue to expect prices to test the downside in the lead-up to the June FOMC meeting as the market re-prices the Fed hiking trajectory," she said in a note.

Spot gold may revisit its May 1 low of \$1,301.51 per ounce as it failed three times to break resistance at \$1,317, said Reuters technical analyst Wang Tao.

However, a four-year high in oil prices may stoke inflation.

"If we start to see any sign that inflation will spike, that'll drive gold higher," said Chris Gaffney, president of world markets at EverBank.

Silver rose 0.6 percent at \$16.53 an ounce. During the session it reached \$16.62, a two-week high.

Platinum rose 0.8 percent to \$912.74 an ounce. Palladium added 0.6 percent to \$975.50. It hit \$982.60, close to a two-week high.

OIL – Daily Outlook

Oil jumps 3 pct after U.S. quits Iran deal, U.S. stock drawdown - Reuters News

Oil prices rose about 3 percent on Wednesday and hit fresh 3-1/2 year highs after a bigger-than-expected drawdown in U.S. oil inventories extended gains from the United States' decision to quit a nuclear deal with Iran.

Ignoring pleas by allies, U.S. President Trump on Tuesday pulled out of a 2015 international deal with Iran and announced the "highest level" of sanctions against the OPEC member, making investors nervous about rising risks of conflict in the Middle East and about oil supplies in a tight market.

News of the deal prompted a volatile trading session on Tuesday in the heaviest volumes for front-month U.S. crude

futures since Nov. 30, 2016.

The United States will likely re-impose sanctions against Iran after 180 days, unless some other agreement is reached.

Brent crude futures rose \$2.36, or 3.2 percent, to settle at \$77.21 a barrel. The global benchmark hit a session high of \$77.43, the highest since November 2014. U.S. West Texas Intermediate (WTI) crude futures rose \$2.08 to settle at \$71.14 a barrel, a 3-percent gain.

Both contracts notched their biggest daily percentage gain in a month.

Prices extended gains after U.S. Energy Information Administration data showed domestic crude inventories fell 2.2 million barrels in the latest week, far exceeding forecasts for a decrease of 719,000 barrels.

Net U.S. crude imports fell last week by 955,000 barrels per day to 5.4 million bpd, the lowest since mid-February, the EIA data showed.

U.S. gasoline futures hit a high of \$2.1701 a gallon, the highest since Hurricane Harvey sent prices surging in August. U.S. heating oil futures surged to \$2.2258 a gallon, the highest since February 2015.

"A whopping drop in imports has resulted in a moderate draw to crude stocks, while a drop in both gasoline and distillates inventories round out a broadly supportive report," said Matt Smith, director of commodity research at ClipperData.

Oil ministers from Saudi Arabia and Kuwait said their countries will work closely with major OPEC and non-OPEC producers to lessen the impact of any supply shortages after U.S. withdrawal from the Iran nuclear deal.

Iran re-emerged as a major oil exporter in 2016 after international sanctions against it were lifted in return for curbs on its nuclear program. The country, the third-biggest producer of crude within the Organization of the Petroleum Exporting Countries, exported about 2.6 million barrels per day (bpd) in April.

Analysts' estimates of the possible reduction in Iranian crude supplies as a result of any new U.S. sanctions range from 200,000 bpd to 1 million bpd.

Investment bank Goldman Sachs said in a note that Trump's announcement brought upside risks to its forecast that Brent crude will hit \$82.50 a barrel by the summer.

Several refiners in Asia said they were seeking alternatives to Iranian supplies.

A number of countries have already cut reliance on Iranian oil, as well as other "traditional" sources of supply, due to a surge in cheaper U.S. crude exports.

Volumes jumped for all key crude oil futures contracts as investors took new positions and refiners hedged to protect themselves from higher feedstock prices.
