GLOBAL MARKETS

- Oil prices finished the week at a gain after a big Friday rally, and U.S. stock indices ended flat-to-higher, to close a bumpy week on a high note.

GLOBAL ECONOMIES

- Investors are underpricing the risk of higher interest rates globally and need to seek adequate compensation for that risk, Guy Debelle, Deputy Governor of the Reserve Bank of Australia said in a speech in Sydney on Friday.
- Manufacturing activity in New Zealand slowed in February as hot weather and storms affected meat and dairy processing, a survey showed on Friday.
- Japan's exports likely rose in February at a slower pace than the previous month due to the timing of the Lunar New Year holiday but their upward trend is expected to stay intact with external demand intact, a Reuters poll showed on Friday.
- Euro zone consumer prices grew less than expected in February because of a fall in unprocessed food prices and reduced energy inflation, data from the European Union's statistics office Eurostat showed on Friday.
- Ratings agency Moody's said Britain's government might struggle to make the kind of cuts to public spending it has announced as it seeks to keep narrowing its budget deficit.
- U.S. industrial production jumped 1.1 percent in February, the largest increase in four months, due to a weather-related rebound in construction and a rise in output from the nation's oil and gas fields and mines.

GLOBAL MARKETS & ECONOMIES

GLOBAL MARKETS

U.S. & Global Markets – Oil prices finished the week at a gain after a big Friday rally, and U.S. stock indices ended flat-to-higher, to close a bumpy week on a high note.

Crude prices had been on track for a weekly loss, but spiked on Friday as energy investors looked to cover short bets ahead of a televised interview Sunday by the U.S. news program "60 Minutes" with Saudi Arabia's Crown Prince Mohammed bin Salman.

The prince will be "comparing Iran's Ayatollah to Hitler, and the battle in Ghouta, Syria, is ramping up," said John Kilduff, partner at investment manager Again Capital in New York. "You can't be short oil over the weekend with all that going on in the region."

U.S. crude rose 1.72 percent to \$62.24 per barrel and Brent was last at \$66.12, up 1.54 percent on the day. During the session, Brent hit \$66.42, its highest since Feb. 28.

Gains on Wall Street also supported crude futures, which have recently been moving in tandem with U.S. stock indices.

The S&P 500, which was down 1.5 percent on the week through Thursday, avoided its first five-day losing streak of 2018, gaining 4.68 points, or 0.17 percent, to 2,752.01.

The Dow Jones Industrial Average rose 72.85 points, or 0.29 percent, to 24,946.51, while the Nasdaq Composite added 0.25 points, or 0 percent, to 7,481.99.

Wall Street nevertheless posted losses for the week, as shares struggled to weather a growing sense of turmoil in U.S. President Donald Trump's administration and signs that protectionist policies could spur a trade war.

Those fears took a back seat on Friday to economic data showing U.S. factory output jumped 1.1 percent in February.

"Today, there are not a lot of headlines out of Washington, so the focus is more on the economy," said Keith Lerner, chief market strategist at SunTrust Advisory Services in Atlanta.

Energy led the S&P with a 0.9 percent gain amid the spike in oil prices.

Retailer Walmart Inc added 1.9 percent, and Home Depot Inc half a percent, after the University of Michigan's preliminary reading of consumer sentiment index rose more than expected to 102.0.

Both of those gains were down, however, from higher climbs earlier in the day.

European shares lost ground for the week, despite a modest gain on Friday, driven by exchange operator NEX Group Plc's 30-percent jump after a takeover offer from U.S.-based peer CME Group Inc.

The pan-European FTSEurofirst 300 index rose 0.29 percent and MSCI's gauge of stocks across the globe was about flat.

U.S. Treasury yields rose on the industrial data, and in anticipation of next week's Federal Open Market Committee meeting, at which the U.S. central bank is expected to raise interest rates for the first time this year.

Benchmark 10-year notes last fell 6/32 in price to yield 2.8445 percent, from 2.824 percent late on Thursday.

The 30-year bond last fell 10/32 in price to yield 3.077 percent, from 3.061 percent Thursday. [\(Source Reuters – @her1en\)](#)

GLOBAL ECONOMIES

Australia – Investors are underpricing the risk of higher interest rates globally and need to seek adequate compensation for that risk, Guy Debelle, Deputy Governor of the Reserve Bank of Australia said in a speech in Sydney on Friday.

Policymakers have repeatedly warned about a sense of complacency in global markets with stock prices, in particular, hovering around record highs.

However, market participants have failed to heed the advice with a gauge of volatility remaining near all-time lows even as U.S. interest rates continue to rise.

"There have been factors behind the low structure of interest rates which are difficult to understand completely and raise questions about its durability," he said.

"In particular, I find it puzzling that there is little compensation for duration in the rate structure."

"At the same time, equity prices embody a view of the future that robust growth can continue without generating a material increase in inflation. Again, there is little priced in for the risk that this may not turn out to be true."

A gauge of world shares, the MSCI index rose more than 21 percent in 2017, the highest returns since 2009, even as the U.S. Federal Reserve increased interest rates three times that year.

The euphoria continued in 2018 until fears of faster Fed rate rises caused a sudden sell-off in global shares in February.

Debelle said that spike in volatility was only "a small example of what could happen following a larger and more sustained shift upwards in the rate structure."

He noted that he has predicted higher markets volatility in the past only to be proven wrong.

"But I think there is a higher probability of being proven correct this time."

New Zealand – Manufacturing activity in New Zealand slowed in February as hot weather and storms affected meat and dairy processing, a survey showed on Friday.

The Bank of New Zealand-Business NZ's seasonally adjusted Performance of Manufacturing Index (PMI) was 53.4 in February, down from 54.4 in the previous month but still above December's five-year low of 51.2.

"There is no doubting the Performance of Manufacturing Index has slowed over recent months. That said, February's PMI is hardly weak in exactly matching its long term average," said BNZ Senior Economist, Doug Steel.

A reading above 50 indicates an expansion in activity, while anything below that threshold indicates a contraction.

Japan – Japan's exports likely rose in February at a slower pace than the previous month due to the timing of the Lunar New Year holiday but their upward trend is expected to stay intact with external demand intact, a Reuters poll showed on Friday.

Exports were expected to have risen 1.9 percent in February from a year earlier after a revised 12.3 percent gain in January, the poll of 19 economists found.

Imports were seen up 17.1 percent from a year ago while trade deficit likely stood at 99.6 billion yen.

"We expect exports remained on the rising trend if we average them out. China's demand will continue to support semiconductor-related products' shipments," said Kazuyuki Tsuchiya, senior researcher at Mitsubishi Research Institute in the survey.

"But growing protectionism by the Trump administration, as in the decision to impose tariffs on steel and aluminum imports, is a worrying factor."

The finance ministry will publish the trade data at 8:50 a.m. Tokyo time on March 19 (2350 GMT, March 18).

Japan, along with the European Union, has urged the United States to grant them exemptions from metal import tariffs, with Tokyo calling for "calm-headed behaviors" in a dispute that threatens to spiral into a trade war.

Next week's data also includes Japan's consumer inflation data, which is expected to show core consumer prices rising in February partly led by gains in gasoline prices, the poll showed.

The core CPI index, which includes oil products but excludes volatile fresh food prices, likely rose 1.0 percent last month from a year ago following a 0.9 percent of growth in January.

"We expect core CPI will stay around 1.0 percent and it will lose the momentum temporarily around the middle of this year partly due to yen's recent appreciation, which is weighting on import prices," said Takeshi Minami, chief economist at Norinchukin Research Institute.

The internal affairs ministry will announce the nationwide consumer prices data at 8:30 a.m. Tokyo time on March 23 (2330 GMT on March 22). The ministry will release Tokyo area's core consumer prices on March 30.

Euro Zone – Euro zone consumer prices grew less than expected in February because of a fall in unprocessed food prices and reduced energy inflation, data from the European Union's statistics office Eurostat showed on Friday.

Inflation in the 19 countries sharing the euro was 0.2 percent month-on-month and 1.1 percent year-on-year. Economists polled by Reuters had expected that monthly increase, but forecast a 1.2 percent annual rise, in line with Eurostat's own earlier estimate.

Unprocessed food prices fell 0.3 percent month-on-month in February for a 0.9 percent year-on-year decline, which subtracted 0.07 points from the overall final annual figure.

Energy prices also fell 0.3 percent on the month for a 2.1 percent year-on-year rise, slowing from 2.2 percent in January.

Without these two most volatile components, a measure the European Central Bank calls core inflation, prices rose 0.3 percent on the month and 1.2 percent year-on-year, the same annual rate as in January.

Some economists look at an inflation measure that excludes even more volatile components, like alcohol and tobacco prices which are often subject to government changes in excise tax.

This measure of inflation showed prices rising 0.4 percent month-on-month and 1.0 percent year-on-year, also unchanged from the January rate.

The ECB wants to keep headline inflation below, but close to 2 percent year-on-year over the medium-term and has been buying tens of billions of euro zone government bonds on the secondary market to pump cash into the banking system and provoke bigger credit action that would boost economic growth and inflation.

ECB President Mario Draghi has said that core inflation has yet to show "convincing signs of a sustained upward trend" because of slack in the labour market and the economy.

Data on labour costs in the fourth quarter of 2017 released separately by Eurostat confirmed that analysis: the growth of labour costs eased for a second consecutive quarter to 1.5 percent in Oct-Dec 2017, although wage costs rose 1.7 percent, from 1.6 percent in the third quarter.

UK – Ratings agency Moody's said Britain's government might struggle to make the kind of cuts to public spending it has announced as it seeks to keep narrowing its budget deficit.

British finance minister Philip Hammond said on Wednesday that he was on track to report the country's lowest budget shortfall since 2002 for the 2017/18 financial year, at 2.2 percent of gross domestic product.

Excluding long-term investment, public finances are due to run a surplus next year, but Hammond still aims to lower the total deficit to 0.9 percent over the next five years so that debt as a share of gross domestic product (GDP) can fall faster.

Moody's said this would be tricky, taking a similar line to the non-partisan Institute for Fiscal Studies a day earlier.

"It remains to be seen whether those cuts will be delivered, given the apparent strains on many public services after a decade of cuts and the

political pressure on the government to increase funding for health care, defence and education," the ratings agency said in a statement sent to media on Friday.

Moody's downgraded Britain's credit rating in September to Aa2, further below its top-notch AAA rating, saying the government's plans to bring down its heavy debt load had been knocked off course and Brexit would weigh on the economy.

Britain's government forecasts that its preferred measure of public debt will fall from 85.6 percent of GDP in the current financial year to 79.3 percent by 2021/22 - lower than the United States or Japan but well above Germany.

However, this measure is currently distorted upwards by the inclusion of temporary Bank of England lending to banks that is due to be repaid by February 2022.

Stripping this out, the true decline in the debt-to-GDP ratio would be less than 2 percentage points, Moody's said.

Britain's public debt ballooned during the 2008 financial crisis when annual borrowing reached almost 10 percent of GDP, and Hammond wants to reduce debt levels to allow more scope for borrowing during a future economic downturn.

Moody's welcomed the government's decision to reduce slightly the proportion of inflation-linked debt in its financing plans, which is the highest of any major economy.

"This will help to address a key longer-term risk ... namely the comparatively high sensitivity of the government's interest bill to inflation," Moody's said.

U.S. – U.S. industrial production jumped 1.1 percent in February, the largest increase in four months, due to a weather-related rebound in construction and a rise in output from the nation's oil and gas fields and mines.

Manufacturing output rose 1.2 percent, the biggest gain since October, the Federal Reserve said in its monthly report.

Economists polled by Reuters had forecast a 0.3 percent rise in industrial production. Output for January was revised down to a decline of 0.3 percent from the previous 0.1 percent drop.

The U.S. central bank's measure of the industrial sector comprises manufacturing, mining, and electric and gas utilities.

February's increase in output was driven by a 2.3 percent rise in construction supplies and a recovery in the output of business equipment, which had stalled in the prior three months.

The utilities index fell nearly 5 percent after a wave of unseasonably warm weather reduced demand for heating.

Manufacturing output edged up 1.2 percent and mining production surged 4.3 percent.

In the 12 months through February overall industrial output rose 4.4 percent.

The percentage of industrial capacity in use rose 0.7 percentage point in February to 78.1 percent, the highest since January 2015.

Fed officials look to capacity use as a signal for how much further the economy can accelerate before sparking higher inflation.

ASIAN STOCK INDEX

Japan's Nikkei share average slipped on Friday in choppy trade as concerns about U.S. political uncertainty sapped investors' risk appetite, although the index managed to post weekly gains. The Nikkei ended 0.6 percent lower at 21,676.51 after it briefly flirted in positive territory in early trade. For the week, the benchmark index gained 1.0 percent.

The dollar was 0.4 percent lower at 105.940 yen following a report by the Washington Post that U.S. President Donald Trump has decided to remove H.R. McMaster as his national security advisor.

Also souring sentiment was news that U.S. Special Counsel Robert Mueller has subpoenaed the Trump Organization for documents, including some related to Russia, the New York Times reported on Thursday, citing two people briefed on the matter.

Analysts said that uncertainty over U.S. political matters is casting a shadow over investment in risky assets, however, the Bank of Japan's exchange-traded fund purchases are expected to limit the downside.

South Korean KOSPI stock index rose on Friday as foreign buying helped recoup early losses. The Korean won was marginally weaker against the dollar while bond yields rose.

At 06:32 GMT, the KOSPI was up 1.59 points or 0.06 percent at 2,493.97. The index ended the week with a 1.4 percent gain.

The won was quoted at 1,066.2 per dollar on the onshore settlement platform, 0.08 percent weaker than its previous close at 1,065.4. The currency has edged up 0.3 percent on a weekly basis.

In offshore trading, the won was quoted at 1,065.31 per U.S. dollar, up 0.32 percent from the previous day, while in one-year non-deliverable forwards it was trading at 1,054.35 per dollar.

MSCI's broadest index of Asia-Pacific shares outside Japan was down 0.05 percent, after U.S. stocks ended the previous session with losses. Japanese stocks weakened 0.58 percent.

The KOSPI is up around 1.0 percent so far this year, and up by 4.07 percent in the past 30 days.

The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won.

The trading volume during the session on the KOSPI index was 372,335,000 shares, and of the total traded issues of 887, the number of advancing shares was 438.

China and Hong Kong stocks slipped on Friday morning as reports of further chaos in the Trump administration added to concerns about rising U.S. protectionism.

At 04:04 GMT, the Shanghai Composite index was down 0.12 percent at 3,287.26, the blue-chip CSI300 index was down 0.22 percent at 4,087.18.

Chinese H-shares listed in Hong Kong fell 0.6 percent at 12,643.31, while the Hang Seng Index was down 0.31 percent at 31,442.49.

The smaller Shenzhen index was down 0.12 percent and the start-up board ChiNext Composite index was weaker by 0.62 percent.

The New York Times reported that U.S. Special Counsel Robert Mueller had issued a subpoena for documents related to U.S. President Donald Trump's businesses.

The Washington Post, meanwhile, reported that President Trump has decided to remove H.R. McMaster as his national security advisor.

Together with the report earlier this week that Trump is seeking to impose tariffs on up to \$60 billion of Chinese imports, they cemented investor concerns that the administration is increasingly leaning towards protectionism.

Material firms, including aluminum and steel makers led the losses on both markets, after a U.S. trade panel said imports of aluminum foil from China harmed U.S. producers.

Indexes tracking material makers in the mainland and Hong Kong down 0.8 percent and 1.2 percent respectively by the lunch break.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.42 percent while Japan's Nikkei index was down 0.69 percent.

The yuan was quoted at 6.3292 per U.S. dollar, 0.15 percent weaker than the previous close of 6.3195.

China stocks fell on Friday and ended the week lower, dragged by consumer and material firms, as reports of more chaos in the Trump administration added to concerns about rising U.S. protectionism.

At the close, the Shanghai Composite index was down 0.6 percent at 3,269.88, while the blue-chip CSI300 index fell 0.96 percent to 4,056.42.

The smaller Shenzhen index ended down 0.61 percent and the start-up board ChiNext Composite index was weaker by 1.48 percent.

Material firms, including aluminium and steel makers, led the decline, after a U.S. trade panel said imports of aluminium foil from China harmed U.S. producers.

An index tracking material makers on the mainland closed down 1.3 percent on Friday.

Reports of further chaos in the Trump administration, together with the report earlier this week that Trump is seeking to impose tariffs on up to \$60 billion of Chinese imports, cemented investor concerns that the administration is increasingly leaning towards protectionism.

CURRENCIES – Daily Outlook

Dollar gains on data, yen up on U.S. political uncertainty - Reuters News

The dollar rose against most currencies on Friday, bolstered by solid U.S. economic data that further supported consensus expectations that the Federal Reserve will raise interest rates at next week's monetary policy meeting.

"The gains in the dollar were a positive reaction to the data," said Omer Esiner, chief market analyst at Commonwealth Foreign Exchange in Washington. "The reports show that the dollar's fundamental backdrop remains strong."

U.S. industrial production surged in February, boosted by strong increases in output at factories

and mines, while a consumer sentiment survey by the University of Michigan showed a rise in the overall index for March.

"A rate hike of 25 basis points on Wednesday is almost a foregone conclusion," said James Chen, head of research at Forex.com in Bedminster, New Jersey.

Given the high expectations for a 25 basis-point rate hike, investors will be focused on the Fed's outlook for further hikes in 2018 and beyond, he added.

The dollar, however, fell to a more than one-week low against the yen, undermined by speculation that more top Trump administration officials could be replaced and concerns U.S. trade tariffs could hurt the global economy.

These U.S.-centric factors have rattled markets in recent days, pushing the dollar lower and leaving the yen as the main beneficiary.

U.S. President Donald Trump has decided to replace his national security adviser, H.R. McMaster, the Washington Post reported on Thursday. At the same time, the New York Times reported U.S. Special Counsel Robert Mueller had issued a subpoena for documents related to Trump's businesses, including some concerning Russia.

Earlier this week, the U.S. currency took a hit after Trump dismissed Secretary of State Rex Tillerson as investors grew increasingly nervous about the direction U.S. policy might take following a series of departures by key staff members.

In late trading, the dollar was down 0.2 percent at 106.08 yen after falling as low as 105.61 yen, the lowest since March 7.

The dollar index was up 0.1 percent at 90.223. It has been on the defensive for much of the week amid the shake-up inside Trump's administration and as next week's Federal Reserve policy meeting comes into focus. The euro fell 0.2 percent to \$1.2284, with little to drive the single currency higher.

It has struggled to make much headway since rallying in January and faced further headwinds after the European Central Bank last week cautioned investors not to expect a paring back of monetary stimulus any time soon. [\(Source Reuters, Research – @her1en\)](#)

Precious Metal – *Daily Outlook***Gold dips, down for week; market braces for Fed rate hike - Reuters News**

Gold prices dipped on Friday and were set for their biggest weekly fall in three weeks on pressure from a stronger U.S. dollar and expectations that the U.S. Federal Reserve will raise interest rates next week for the first time this year.

Losses were limited by political tumult in the United States which fueled safe-haven demand for bullion.

A Fed rate hike generally lifts bond yields, making non-yielding bullion less attractive. Higher U.S. interest rates also tend to strengthen the dollar, making gold more expensive for users of other currencies.

Spot gold dipped 0.3 percent, trading at \$1,312.36 per ounce by 1:35 p.m. EST (1735 GMT). It was on

track to end the week down 0.8 percent.

U.S. gold futures for April delivery settled down \$5.50, or 0.4 percent, at \$1,312.30 per ounce.

Gold has tended in recent years to fall before U.S. interest rate hikes and rally afterwards.

"It recovers because the interest rates that we're seeing right now are not negative for gold," added Jeffrey Christian, managing partner of CPM Group.

Technical support for gold was at its 100-day moving average around \$1,304, the psychologically important level of \$1,300 and the 200-day moving average at \$1,290.

Gold prices were supported by deepening U.S. political uncertainty and fears that U.S. tariffs on aluminum and steel could disrupt global trade.

On Thursday, the Washington Post reported that Donald Trump's national security adviser, H.R. McMaster, would become the latest senior official to leave his post. The New York Times said U.S. Special Counsel Robert Mueller had issued a subpoena for documents related to Trump's businesses.

"There is a lot of confusion in the market about what the White House's strategy is on any large macro issues," said Mitsubishi Analyst Jonathan Butler.

"These factors should keep gold above \$1,300, but it's more of a holding pattern and a generally supportive environment than something that is going to raise prices significantly."

Bob Haberkorn, senior market strategist at RJO Futures, said gold prices are low relative to other commodities.

A diplomatic crisis between Russia and Britain over the poisoning of a former Russian double agent on English soil underlined gold safe-haven appeal.

Among other precious metals, silver lost 0.5 percent at \$16.29 an ounce, poised for a 1.9 percent weekly drop, its largest weekly decline since early February.

Platinum dropped 0.5 percent at \$949.10 an ounce, on track for a 1.6 percent weekly decline. Palladium increased 0.7 percent at \$993.10 an ounce, ending the week barely changed.

OIL – Daily Outlook**Oil prices jump, Brent hits highest in more than 2 weeks - Reuters News**

Oil prices jumped on Friday, with Brent crude futures hitting their highest in more than two weeks as U.S. stock prices rose and investors covered short bets ahead of a weekend in which the U.S. news program "60 Minutes" will air an interview with Saudi Arabia's crown prince.

Saudi Crown Prince Mohammed bin Salman will be on "60 Minutes" on Sunday "comparing Iran's Ayatollah to Hitler, and the battle in Ghouta, Syria, is ramping up," said John Kilduff, partner at investment manager Again Capital in New York. "You can't be short oil over the weekend with all that going on in the region."

Brent futures rose \$1.09 to settle at \$66.21 a barrel, a 1.7 percent gain. During the session, Brent hit \$66.42, its highest since Feb. 28.

U.S. West Texas Intermediate (WTI) crude futures for April, which will expire on Tuesday, rose \$1.15 to settle at \$62.34 a barrel, a 1.9 percent gain. WTI hit a high of \$62.54, its highest since March 7.

Brent futures gained 1 percent for the week, while WTI marked a weekly rise of 0.4 percent. It was the second straight weekly rise for both contracts.

Gains on Wall Street also supported crude futures, which have recently been moving in tandem with U.S. stock indices.

Hedge funds and other money managers cut their bullish bets on U.S. crude oil futures and options in the week to March 13, as crude prices fell for a second week, the U.S. Commodity Futures Trading Commission (CFTC) said.

The speculator group cut its combined futures and options position in New York and London by 24,667 contracts to 453,864 during the period. The cuts marked the second consecutive week in which speculators cut their net long positions in the market.

U.S. drillers added four oil rigs this week, bringing the total count to 800, General Electric Co's Baker Hughes energy services firm said. It was the seventh U.S. rig count rise in eight weeks.

On Thursday the International Energy Agency (IEA) predicted global oil demand would pick up this year, but supply is growing at a faster pace, which should boost inventories.

The agency raised its forecast for oil demand this year to 99.3 million barrels per day (bpd) from 97.8 million bpd in 2017, and said it expected supply from non-OPEC nations to grow by 1.8 million bpd in 2018 to 59.9 million bpd, led by the United States.

OPEC and other producers have cut output to reduce a global crude glut.

On Wednesday, the U.S. government reported that crude stockpiles in the United States increased by a more-than-expected 5 million barrels.
