GLOBAL MARKETS

U.S. & Global Markets – World stocks were set to post their first loss in five days on Monday, breaking a winning streak that saw them recover almost half their losses from a violent sell-off two weeks ago.

In a day of relatively quiet trading owing to market holidays in the United States and China, losses in Europe weighed on stocks globally, which had earlier been propped up by gains in Japan.

European markets had opened positive, setting up the MSCI world index for its sixth day of gains but, by afternoon, the pan-European STOXX index had slipped over half a percent.

A poor update from Reckitt Benckiser hit the consumer staples sector, outweighing gains among financials and strength in steel makers after the U.S. outlined proposals for hefty import curbs.

Shares in Tenaris, Outokumpu and Arcelor Mittal - which have facilities in the United States - were the biggest gainers in Europe, up between 1 and 4 percent.

The MSCI world index, which tracks shares in 47 countries, was down 0.1 percent. The index has recovered nearly half what it lost between late January and last week's low. The 4.3 percent gain it ultimately posted last week was its best weekly performance since December 2011.

INFLATION FEARS

January's two-week rout, triggered by worries about a rise in U.S. inflation, had wiped more than \$6 trillion off the value of global stock markets.

The sell-off took place despite global growth was helping to improve the corporate earnings outlook.

Just before the plunge, world shares were trading at 16.66 times expected earnings, the highest levels since 2004, according to Thomson Reuters Datastream. They are currently at 15.33 times.

"Investors knew market volatility would be low as the U.S. and Canada celebrate public holidays, and that weighed on enthusiasm in this part of the world," said David Madden, markets analyst at CMC Markets. "Dealers decided to lock in their profits from week."

Equity investors have drawn some reassurance from a fall in the VIX - a measure of implied volatility on the S&P 500 index, also known as Wall Street's "fear gauge".

The index has remained below 20 for three days, last reading at 19.46. It spiked to a 2-1/2-year high of 50.3 two weeks ago, a jump that caused massive losses among investors who had bet equity markets would stay stable on a combination of solid economic growth and moderate inflation.

Greek government bond yields dipped after a ratings upgrade from Fitch that highlighted improving sentiment towards the indebted southern European state. Italian bonds came under pressure from jitters ahead of next month's election.

Bond yields across the euro zone were broadly higher in the absence of any fresh drivers.

The minutes of the Fed's last policy meeting, held amid the equities tumble on Jan. 30-31, are due on Wednesday. Besides the outlook on rates, markets will be keen to see what, if anything, the Fed makes of the gyrations in markets. (*Source Reuters – @her1en*)

GLOBAL ECONOMIES

New Zealand – Growth in New Zealand's services sector eased in January and new orders fell to their lowest in 10 months, a survey showed on Monday.

The Bank of New Zealand-Business NZ's seasonally adjusted performance of services index (PSI) edged down to 55.8 from 56 in the previous month. A reading above 50 indicates expansion in activity.

The sub-index measuring new orders and business fell to 57.6, the first time it had slipped below 60 since April 2017.

"While the PSI is relatively robust, combined with the Performance of Manufacturing Index it nonetheless signals something of a slowing in GDP growth for the near term," said BNZ senior economist Craig Ebert.

Last week, the companion manufacturing survey showed a partial recovery from December's dismal result, but a stark fall in the number of positive comments from firms.

Japan – Buoyant sales of cars and electronics led Japan's exports to a 14th straight month of growth in January but manufacturers' business confidence slid - highlighting fears of the rising yen disrupting an export-led recovery.

The trade data came on the heels of the Reuters Tankan survey that found Japanese manufacturers' confidence deteriorated sharply in February, pointing to global stock market turmoil and the yen undermining business sentiment.

Such variable indicators underscore the challenge facing the Bank of Japan's leadership trio – reappointed Governor Haruhiko Kuroda and two new deputies – as they work to stimulate the economy out of decades of stagnation.

The low mood of manufacturers in the Tankan survey was at odds with Ministry of Finance (MOF) data out on Monday showing that exports grew 12.2 percent year-on-year in January, topping the prior month's 9.3 percent gain and economists' estimate of a 10.3 percent increase.

Monday's news also followed gross domestic product data out last week showing Japan recorded its eighth straight quarter of economic expansion over October-December.

A strong currency eats into Japanese manufacturers' profits and could disrupt the virtuous cycle of business investment, consumer spending and growth that authorities have struggled to set in motion.

"Our consolidated profits have deteriorated because of a strong yen," a manager of a transport equipment maker wrote in the survey.

Economists believe global demand should continue to drive Japanese exports and broader economy in the coming months, even though the rising yen clouds the outlook.

The dollar was down 0.4 percent to 105.545 on Friday, its lowest in 15 months.

Sustained yen appreciation of 5 percent would lower GDP-based real exports by 0.2 percent in the first year, 1.1 percent in the second and 1.2 percent in the third year, which may not be fatal but could not be ignored, said Yoshimasa Maruyama, chief economist at SMBC Nikko Securities.

"We don't forecast exports to sputter but need to bear in mind the risk that a strong yen may curb their driving force."

The Reuters Tankan sentiment index for manufacturers stood at 29 in February, down from the previous month's 11-year high of 35, the survey conducted Jan. 31 to Feb. 14 found. The monthly poll closely tracks the Bank of Japan's key quarterly tankan.

Monday's trade data showed exports to China, Japan's biggest trading partner, jumped 30.8 percent year-on-year in January, due in part to an export surge before the Lunar New Year that happened later than last year. The gain was led by semiconductor production equipment, car engines and hybrid cars.

Shipments to Asia as a whole, which account for more than half of Japan's exports, grew 16.0 percent in the year to January.

U.S.-bound shipments rose 1.2 percent in the year to January, led by steel, batteries and medicines, while car shipments declined 3.9 percent. The small rise in U.S.-bound exports followed a 3.0 percent gain in the previous month.

Japan's trade surplus with the United States fell an annual 12.3 percent in January to 349.6 billion yen, a second declining month.

The overall trade balance swung to a deficit of 943.4 billion yen (\$8.87 billion), the first trade deficit in eight months.

"Net exports may return to growth this quarter," said Marcel Thieliant, senior Japan economist at Capital Economics.

"Looking ahead, the export climate index climbed to a fresh high last month and suggests that external demand remains healthy. We've pencilled in a 4.5 percent rise in export volumes this year."

Euro Zone – The euro zone's adjusted current account surplus narrowed slightly in December, moving broadly in line with its recent trend, European Central Bank data showed on Monday.

The currency bloc recorded an adjusted surplus of 29.9 billion euros (\$37.09 billion) in December, compared with 35.0 billion euros a month earlier, the data showed.

Over the past 12 months, the bloc's surplus was 3.5 percent of GDP, up from 3.4 percent a year earlier, with the figure hovering around this level for most of the past two years.

The unadjusted surplus increased to 45.8 billion euros from 40.1 billion euros in November, the ECB said in a monthly release.

U.K – British households' gloom about their finances deepened this month, and most now expect borrowing costs to rise again within six months after the Bank of England raised interest rates in November, a survey showed on Monday.

Data company IHS Markit said its Household Finance Index, a monthly gauge of financial well-being, fell to a seven-month low of 42.2 from 42.9 in January.

Conducted over six days starting on Feb. 8, the day the BoE said it was likely to raise rates sooner and by more than it previously thought, the survey showed 60 percent of households expected a hike within six months, up from 45 percent in January.

Britain's economy slowed in 2017 as higher inflation - fuelled by the post-Brexit referendum fall in the pound - hurt the spending power of consumers. The BoE has said it expects the squeeze will ease in 2018 as inflation cools and weak wage growth ticks higher.

But Monday's report showed households are not feeling optimistic.

"The latest survey adds to evidence that UK households have seen an erosion of their financial wellbeing so far this year, with stubbornly high inflation the main factor placing pressure on consumer budgets," Tim Moore, associate director at IHS Markit, said.

Households reported only a weak rise in income from employment in January, a possible concern for the BoE which predicts an acceleration of wage growth in 2018. Official figures on wages covering the three months to December are due on Wednesday.

Separate figures from the Chartered Institute of Personnel and Development showed that major employers expect to raise pay by less than inflation in 2018.

The median basic pay increase over the 12 months to December 2018 was likely to be 2 percent, unchanged from 2017, CIPD members from nearly a thousand employers said.

This contrasts with a BoE survey of major private-sector employers last week which pointed to pay rises of 3.1 percent this year - the biggest in a decade.

IHS Markit also reported a sharp drop in households' appetite for major purchases, chiming with data last week that showed retail sales volumes

barely rose in January, capping the weakest three-month stretch since April last year.

A Reuters poll of economists published last week showed the BoE is likely to raise interest rates to 0.75 percent in May.

The IHS Markit survey, conducted by Ipsos MORI, polled 1,500 British adults.

Canada – The Canadian government is evaluating what impact lower U.S. corporate taxes could have on competitiveness north of the border, the finance minister said on Friday, though he gave no details on what Canada might do in response.

Finance Minister Bill Morneau met with a group of private sector economists earlier in the day to discuss the Canadian outlook ahead of the release of the federal government's budget later this month.

Morneau said they discussed the need to carefully consider some of the challenges facing Canada, such as the renegotiation of the North American Free Trade Agreement (NAFTA) and changes to the U.S. tax rate.

"With respect to risks like changing tax rates, we need to do it right, so we are doing our analysis to understand the impact of any changes," Morneau told reporters, adding that he considered Canada's tax rate to be competitive.

U.S. President Donald Trump late last year signed a massive tax overhaul into law, cutting the U.S. corporate rate to 21 percent from 35 percent.

The Bank of Canada last month warned the tax changes may prompt firms to redirect spending from Canada to the United States.

The Canadian federal government charges a 15 percent corporate tax, with provincial taxes giving a combined rate of about 27 percent in some of Canada's major provinces.

The Liberal government will release its budget on Feb. 27, its third since coming into power in 2015 on the promise of running deficits in order to spend on the economy.

The budget is not expected to contain much in the way of major new spending, although the government may have some leeway given the economy's strong performance in 2017.

Asked whether the budget will forecast when Ottawa will return to balance, Morneau said the government will continue to focus on reducing its debt compared to gross domestic product.

Long-term fiscal projections released by the Finance Department in December anticipated Canada would run a surplus by 2045.

ASIAN STOCK INDEX

Japan's Nikkei Japanese stocks rose on Friday, with investors relieved to see the government appoint Bank of Japan Governor Haruhiko Kuroda for another term and choose an advocate of bolder monetary easing as one of his deputies.

The Nikkei ended 1.2 percent higher to 21,720.25. For the week, it rose 1.6 percent.

In a widely expected move, the government nominated Kuroda to serve another five-year term when the current one ends in April, a sign of Premier Shinzo Abe's confidence in the governor's efforts to stimulate the economy out of stagnation.

The government also nominated Masazumi Wakatabe, a professor at Waseda University and an advocate of aggressive monetary easing, as deputy governor.

BOJ Executive Director Masayoshi Amamiya, a veteran central banker known for masterminding monetary policy strategies, was nominated for the second deputy governor post.

"In the short term, the BOJ gave the stock market relief by not derailing Kuroda's monetary policy. It sent a message to the market that the main part of Abenomics will not change," said Norihiro Fujito, senior investment strategist at Mitsubishi UFJ Morgan Stanley Securities.

"It must have made the right choice by selecting Wakatabe and Amamiya when the market is volatile."

The broader Topix gained 1.1 percent to 1,737.37, with all 33 subsectors in positive territory. Shares in utilities, food and medicine companies, which are the most sensitive to domestic demand, outperformed.

Tokyo Electric Power soared 4.4 percent, Chubu Electric Power Co jumped 6.5 percent, Astellas Pharma gained 1.2 percent and Ajinomoto Co added 2.0 percent.

Chip-related stocks were also strong, with Tokyo Electron and Advantest Corp both rising 1.8 percent.

South Korean financial markets are closed on Friday for a public holiday. Markets will resume trade at normal hours on Monday, Feb. 19.

Hong Kong's financial markets will be closed on Friday and Monday (Feb. 16 and Feb. 19) for the Lunar New Year holiday. Markets will resume trading on Tuesday, Feb. 20.

China stocks The market is closed on Friday for the Lunar New Year holiday

CURRENCIES – Daily Outlook

Dollar bounces after hitting 3-year low - Reuters News

The dollar enjoyed a small rebound on Monday as investors bought back the greenback after its plunge to three-year lows, although analysts said any recovery looked set to be brief with dollar bears still out in force.

The U.S. currency has weakened this year as expectations that central banks will start raising interest rates in other parts of the world erode its perceived yield advantage.

Confidence in the dollar has also been shaken by concerns the United States could pursue a weaker dollar policy and by mounting worries about the U.S. budget deficit, which is projected to balloon to \$1 trillion in 2019 amid a government spending splurge and large corporate tax cuts.

That trend of dollar weakness came to an end when a sudden stock-market sell-off in February sent investors fleeing into the relative safety of the greenback.

The return of risk appetite last week has meant the pressure on the dollar has resumed, although on Monday the U.S. currency found its feet as some investors bought in after the recent falls.

The dollar measured against a basket of currencies rallied 0.3 percent to 89.342. The index is off a low of 88.253 hit last week, which was the weakest level for the U.S. currency since December 2014.

So far this year the dollar has lost almost three percent after tumbling 10 percent in 2017.

Analysts said the market was positioned for only a brief respite for the greenback.

"By and large the sense in the market is that the dollar depreciation is reasserting itself," said Alvin Tan, a London-based strategist at Societe Generale.

"We are a bit more cautious. The dollar has weakened too fast. We are still looking for dollar weakness this year but we've returned to the January trend [of a weaker dollar] too fast," he said.

A lack of key data on Monday and market holidays in the U.S. and parts of Asia is likely to keep trading quiet, analysts said.

Against the euro, the dollar rose 0.3 percent to \$1.2386 with traders pointing to crucial business surveys later this week that could give the single currency some more direction.

Versus the yen, the dollar gained 0.2 percent to 106.55 but remained down more than two percent this month and close to 15-month lows touched last week.

"The fact that the dollar sell-off ran out of steam on Friday afternoon does not lead me to hope that it is over," Commerzbank analysts said in a note.

"The dollar bears did so well recently that there was time for profit-taking ahead of the weekend. That does not mean that they might not be selling dollar again today with renewed enthusiasm," the analysts said.

The U.S. currency's outlook remains uncertain in the longer-term, strategists said, particularly as other parts of the world where central banks are tightening policy and economies are strong look increasingly attractive for investors.

The Swedish crown was down 0.3 percent against the euro to 9.910 crowns per euro.

That followed news that banks in Latvia, a country in which Swedish institutions are heavily invested, faced accusations of busting sanctions on North Korea and the central bank governor was detained by the anti-corruption agency.

Analysts said it was not clear to what extent the crown's weakness on Monday could be attributed to the Latvia developments. [\(Source Reuters, Research – @her1en\)](#)

Precious Metal – *Daily Outlook*

Gold steady as dollar claws back some losses - Reuters News

Gold prices were down slightly on Monday as the dollar clawed back some recent losses and stocks rose, but worries about U.S. inflation kept buyers in the metal.

Spot gold was down 0.11 percent at \$1,346.31 an ounce at 1:30 p.m. EST (1830 GMT). U.S. April gold futures slipped 0.54 percent to \$1,348.90 per ounce.

Gold rose 2.4 percent last week in its biggest weekly gain in more than five months.

"Gold is doing relatively well in a risk-on environment. The safe-haven appeal (in gold) is a bit in question but it has a lot to do with movements in the dollar which has recovered somewhat," said ABN AMRO commodity strategist Georgette Boele.

The dollar index, which measures the currency against a basket of currencies, was up 0.1 percent after shedding 1.4 percent last week.

Investors piled into gold last week on concerns that U.S. inflation could heat up.

In wider markets, world stocks extended their recovery on Monday while oil inched higher.

"The 10-year bonds across the globe are up, so the price of gold came off a bit on that," said Walter Pehowich, executive vice president of investment services at Dillon Gage Metals.

The minutes of the U.S. Federal Reserve's last policy meeting, held on Jan. 30-31 amid the equities tumble, are due on Wednesday. Besides the outlook on rates, investors will be keen to see what the Fed made of the market gyrations.

On Friday, a 37-page indictment filed by U.S. Special Counsel Robert Mueller charged 13 Russians and three Russian companies with meddling in the 2016 U.S. presidential election. Russia dismissed the allegations as absurd.

Gold is often used as a hedge against geopolitical uncertainty.

Hedge funds and money managers cut their net long positions in COMEX gold in the week to Feb. 13, U.S. Commodity Futures Trading Commission data showed on Friday.

Trading is expected to be slower than usual this week due Lunar New Year celebrations in China. Monday is also a market holiday in the United States for Presidents Day.

SPDR Gold Trust, the world's largest gold-backed exchange-traded fund, said its holdings rose 0.39 percent to 824.54 tonnes on Friday.

Among other precious metals, silver was down slightly at \$16.657 an ounce after falling 1.2 percent in the previous session.

Platinum was up 0.25 percent at \$1,005.00 an ounce, after earlier touching its highest in over three weeks at \$1,013.50.

Palladium fell 1.1 percent to \$1,033.00 an ounce after touching its highest in about two weeks earlier in the session.

"Palladium has been expensive and overvalued for a long time now so I could see it go lower from here," ABN AMRO's Boelle said. [\(Source Reuters, Research – @her1en\)](#)

OIL – Daily Outlook**Oil hits 2-week high on share market recovery, Mideast tensions - Reuters News**

Oil prices hit their highest level in nearly two weeks on Monday, lifted by a global equity market recovery and tensions in the Middle East, although concerns of rising U.S. production tempered gains.

European shares rose for a fourth straight session, with global stocks set for a sixth session of gains, following a sell-off triggered by fears of creeping inflation and higher borrowing costs.

Brent crude was up 89 cents at \$65.73 a barrel at 1802 GMT, after rising to an 11-day high of \$65.75 a barrel earlier in the session.

U.S. West Texas Intermediate crude for March delivery was up 82 cents at \$62.50 a barrel,

after earlier gaining as much as 1.44 percent to its highest since Feb. 7.

"Benign stock markets are providing ... as are geopolitical tensions in the Middle East," Commerzbank said in a note.

Israeli Prime Minister Benjamin Netanyahu said on Sunday that Israel could act against Iran itself, not just its allies in the Middle East, after border incidents in Syria brought the Middle East foes closer to direct confrontation.

Trading is expected to be slower than usual on Monday due to market holidays in the United States and Greater China.

The U.S. oil rig count, an indicator of future production, rose by seven to 798, its highest since April 2015, according to a weekly report from General Electric's Baker Hughes unit.

That marked the first time since June that drillers added rigs for four consecutive weeks, and the figure was well up on the 597 rigs that were active a year earlier as energy companies have boosted spending since mid-2016 when crude prices began recovering from a two-year crash.

Surging U.S. production is offsetting efforts by the Organization of the Petroleum Exporting Countries (OPEC) and some other producers including Russia to curb production by 1.8 million barrels per day (bpd) until the end of 2018.

Money managers slashed their bullish bets on Brent crude futures by the most in nearly eight months in the week to Feb. 13, InterContinental Exchange data showed.

Speculators also cut net long U.S. crude futures and options positions in the week to Feb. 13 by the most since late August, the U.S. Commodity Futures Trading Commission (CFTC) said.

Oil pricing agency Platts is looking at adding new oil production from the Johan Sverdrup oilfield to its global dated Brent crude benchmark, to ensure liquidity is maintained. [\(Source Reuters, Research – @her1en\)](#)
