GLOBAL MARKETS

- Growing expectations of increased oil supply hit crude prices on Friday, lifting the U.S. dollar and weighing on energy shares, while political upheaval in Europe and uncertainty over a U.S.-North Korea summit restrained equity markets.

GLOBAL ECONOMIES

- Japan's industrial production was expected to rise for a third straight month in April thanks to brisk export demand, a Reuters poll found on Friday, a positive sign after the economy contracted in the first quarter.
- Falling business investment and the weakest household spending growth in more than three years marked a bad start to 2018 for Britain's economy, as official data on Friday confirmed it almost stagnated.
- There is nearly a one-in-three chance of a U.S. recession in the next two years, according to a Reuters poll of economists who cited concerns about an already-old business cycle, as well as rising interest rates and barriers to trade.
- Canada's budget deficit narrowed in the 2017-18 fiscal year compared to the year before, putting the government on track to meet its projections, the finance department said on Friday.

GLOBAL MARKETS & ECONOMIES

GLOBAL MARKETS

U.S. & Global Markets – Growing expectations of increased oil supply hit crude prices on Friday, lifting the U.S. dollar and weighing on energy shares, while political upheaval in Europe and uncertainty over a U.S.-North Korea summit restrained equity markets.

Brent crude futures fell \$2.35, or 3 percent, to settle at \$76.44 a barrel after Saudi Arabia and Russia said they were ready to ease supply curbs that have pushed prices to their highest since 2014.

U.S. President Donald Trump on Friday signaled that a June 12 meeting with North Korean leader Kim Jong Un could still take place a day after he canceled the planned historic summit.

That led to a dip in gold prices, but it did little to increase demand for risk assets, investors said.

"At this point investors are shrugging off Washington headlines because in most cases they won't affect the markets and Washington has a hard time following through what they say," said Arian Vojdani, investment strategist at MV Financial in Bethesda, Maryland.

Gold prices dropped slightly after Trump's latest North Korea comments, but remained above \$1,300 per ounce.

Wall Street ended mostly down as oil prices dragged down energy stocks ahead of a holiday weekend in the United States, which typically leads to low volume.

The S&P energy index slid 2.9 percent, while Chevron dropped 3.7 percent and Exxon Mobil fell 2.1 percent and were the biggest drags on the Dow.

The tech-heavy Nasdaq was aided by chipmakers, led by a 2.6 percent jump in Broadcom.

U.S. Treasury yields fell to their lowest level in three weeks as concerns about Italy's new government and a leadership change in Spain boosted appetite for low-risk investments.

GLOBAL ECONOMIES

Japan – Japan's industrial production was expected to rise for a third straight month in April thanks to brisk export demand, a Reuters poll found on Friday, a positive sign after the economy contracted in the first quarter.

Factory output was expected to have risen by 1.2 percent in April from the previous month, the poll of 17 economists showed, following gains of 1.4 percent in March and 2.0 percent in February.

"We expect industrial production grew in April led by transport equipment and general-purpose, production and business-oriented machinery on the back of solid exports," said Yoshimasa Maruyama, chief market economist at SMBC Nikko Securities said.

"Production for January-March fell for the first time in eight quarters, which was merely a soft patch, and it is likely to return to growth in April-June. Averaging them out, the rising trend appears to be sustained."

Japan's exports accelerated in April on increased shipments of cars and machines used to make semiconductors and they are seen likely to continue growing.

The trade ministry will issue the factory output data at 8:50 a.m. on Thursday May 31, Japan time (2350 GMT May 30).

Workforce data is due on Tuesday. Economists expect the unemployment rate to be steady at 2.5 percent in April for a third straight month after hitting a 25-year low of 2.4 percent in January.

The jobs-to-applicants ratio was seen likely to have reached 1.60 in April from 1.59 in March. It would be the highest such reading since 1.64 in January 1974.

"A labour shortage helps improve wages and working conditions, and the number of female workers continued increasing. The jobless rate likely stayed at a low level," said Takumi Tsunoda, senior economist at the Shinkin Central Bank Research Institute.

The poll also found retail sales were expected to rise 1.0 percent in April from a year earlier, up for a sixth straight month, thanks to strong sales of seasonal items such as spring clothes.

The government will publish the jobs data at 8:30 a.m. on Tuesday May 29 Japan time (2330 GMT on May 28) and retail sales figures at 8:50 a.m. on Wednesday May 30(2350 GMT on May 29).

UK – Falling business investment and the weakest household spending growth in more than three years marked a bad start to 2018 for Britain's economy, as official data on Friday confirmed it almost stagnated.

Despite the Bank of England's doubts, the Office for National Statistics (ONS) stuck to its view that bad weather alone could not explain why the economy grew just 0.1 percent between January and March, its weakest performance since 2012.

Instead, the ONS said it saw a longer-term pattern of slowing growth, especially among consumers who were hit by a rise in inflation after the 2016 Brexit vote.

With Britain's exit from the European Union due in less than a year and the shape of their future relationship still uncertain, business investment dropped 0.2 percent quarter-on-quarter, its worst performance since mid-2015, the ONS said.

Net trade failed to contribute to growth and household spending edged up only 0.2 percent on the quarter, the weakest increase since the fourth quarter of 2014.

"Overall, the economy performed poorly in the first quarter, with manufacturing growth slowing and weak consumer-facing industries," ONS statistician Rob Kent-Smith said.

Separate figures from banking industry body UK Finance showed slow growth in consumer lending in April and a YouGov/Cebr survey showed a decline in household confidence ahead of Brexit.

BoE Governor Mark Carney has said business investment would normally be growing much more strongly as the world economy prospers and was being held back by uncertainty about Brexit.

Britain's economy stood 1.2 percent larger in the first quarter than its level a year ago. Only Japan has grown more slowly among the Group of Seven rich countries.

"The first-quarter figures probably overestimate the picture of underlying softness in the (British) economy and we should expect a bit of a rebound in the second quarter," Berenberg economist Kallum Pickering said, pointing to a recent easing of inflation and a rise in wage growth.

Sterling and British government bonds were little changed by the data.

Earlier this month the BoE said it expected growth in the first quarter would eventually be revised up to 0.3 percent.

It has pencilled in quarterly growth of 0.4 percent for the current April to June period.

Still, after the weak first-quarter figures from the ONS, the BoE chopped its forecast for annual average growth in 2018 to 1.4 percent from 1.8 percent previously -- in line with the consensus of economists polled by Reuters.

The ONS said household spending was just 1.1 percent higher in the January to March quarter than a year earlier, the weakest annual growth in six years.

The economy was helped by a 0.5 percent quarterly rise in government spending, the largest since early 2016.

U.S. – There is nearly a one-in-three chance of a U.S. recession in the next two years, according to a Reuters poll of economists who cited concerns about an already-old business cycle, as well as rising interest rates and barriers to trade.

The latest poll of over 100 economists taken May 16-24 showed U.S. economic growth was forecast to average 2.8 percent in 2018, its fastest pace in three years, fueled by the biggest tax overhaul since the 1980s.

But as has been in the case in a series of monthly polls, the expected boost was predicted to be short-lived. The economy is forecast to lose some momentum next year, averaging 2.5 percent, slowing further to 1.8 percent in 2020.

When asked on the likelihood of a U.S. recession in the next 12 months, the median of over 70 economists who answered an additional question was 15 percent, around where it has been over the last few years.

But that probability doubled to 31 percent over the next two years, with the most pessimistic call at 70 percent.

"The risk of a recession really picks up after a year, or sometime in 2020 because that is when you start to see the fiscal stimulus start to fade," said Joseph Song, senior U.S. economist at BofAML.

"That is when you return to trend or potential growth, which is below 2 percent, and if you get some sort of a negative shock - whether it is a normal oil shock, or a dollar shock - then you start to see growth get hurt and potentially turn negative".

While predicting turning points in economic cycles is no easy task, the recovery from the devastating 2007-2009 financial crisis has been unusually lengthy, and the latest poll showed some signs the current economic expansion will end soon.

An increasing number of economists expect the Federal Reserve to start cutting interest rates sometime in 2020 compared with previous polls.

For now though, continued strength in the economy has pushed most policymakers in favor of another interest rate hike "soon", according to minutes of the Fed's last policy meeting released on Wednesday.

The central bank will raise rates in June, according to all but one of 110 economists polled. Two more hikes will follow this year, taking the fed funds rate to 2.25-2.50 percent, according to the median and a majority of respondents.

If those predictions come true, it will make four rate hikes this year, compared to three projected by the Fed's own dot plots.

While inflation expectations were unchanged compared with the previous poll, it was forecast to reach the Fed's target of 2 percent next quarter.

The core PCE price index, the Fed's preferred inflation measure, was expected to reach 2.1 percent in the third quarter and level out to average slightly above that at 2.2 percent next year. It was last reported at 1.9 percent.

An already-mature U.S. expansion may soon appear even more pronounced compared to the global economy, which is also showing signs of aging. And the threat of trade protectionism escalates is very real.

President Donald Trump, who launched a new investigation into automobile imports that could lead to new U.S. tariffs similar to those

imposed on imported steel and aluminum, said he will propose new tax cuts sometime before November.

But as they overwhelmingly did when surveyed before the tax cuts passed by Congress late last year, many economists again warned tax cuts were not warranted at this stage of the business cycle, given the economy is close to full employment.

"Fiscal stimulus is a terrible idea. There is a real argument for changing the tax code to try to simplify it and bring down marginal rates but ideally that should have been done in a deficit-neutral way, similar to the 1986 reform package," said Jim O'Sullivan, chief economist at High Frequency Economics.

"But clearly, it is adding stimulus at a point of the cycle when fiscal stimulus is not needed. There should be the goal of boosting the supply-side of the economy, absolutely. But the economy right now does not need demand-side stimulus."

Canada – Canada's budget deficit narrowed in the 2017-18 fiscal year compared to the year before, putting the government on track to meet its projections, the finance department said on Friday.

Canada posted a deficit of C\$16.19 billion (\$12.48 billion) in the fiscal year that ended in March, down from a deficit of C\$21.85 billion the year before.

While that was also smaller than the C\$19.4 billion deficit in 2017-18 that the government predicted in its February budget, the figures do not account for year-end adjustments or planned spending on veterans' benefits, the finance department said.

Taking those adjustments into account, the figures are "broadly in line" with the expected deficit for the fiscal year, the report said.

Revenue rose 5.4 percent compared to the previous fiscal year on increased income from personal and corporate taxes and outpacing a 3.5 percent increase in program expenses.

The budget deficit for March was C\$10.63 billion, slightly wider than the C\$10.39 billion reported in March 2017. While revenue was up in the month, so was spending on program expenses.

ASIAN STOCK INDEX

Japan's Nikkei edged up on Friday, supported by such large cap stocks as Tokyo Electron and Fast Retailing, but gains were limited as sentiment was soured after U.S. President Donald Trump cancelled a summit with North Korea's leader.

Defence-related stocks attracted buying, however, on speculation that geopolitical tensions would rise.

The Nikkei share average closed up 0.1 percent to 22,450.79. For the week, the index lost 2.1 percent, its first weekly decline in nine weeks.

The broader Topix dropped 0.2 percent to 1,771.70, with the Topix Core 30 falling 0.6 percent.

Large cap stocks were mixed. Tokyo Electron rose 1.7 percent, Fast Retailing gained 0.9 percent, while automakers continued to slide on fears of new U.S. tariffs.

Toyota Motor Corp dropped 1.3 percent and Subaru Corp declined 1.1 percent.

Meanwhile, defence equipment maker Ishikawa Seisakusho surged 5.5 percent, Howa Machinery jumped 3.2 percent, and health protection device maker Shigematsu Works rose 2 percent.

Trump, in a letter to North Korea released by the White House, called off the June 12 summit, citing "tremendous anger and open hostility" in a recent statement by Pyongyang. The cancellation came even after North Korea followed through on a pledge to blow up tunnels at its nuclear test site.

North Korea responded on Friday with measured tones to Trump's decision to call off a historic summit with leader Kim Jong Un scheduled for next month, saying Pyongyang hoped for a "Trump formula" to resolve the standoff over its nuclear weapons programme.

Defensive shares such as railway and food stocks, which are less affected by global risks, found support. East Japan Railway rose 1.1 percent, while Ajinomoto Co advanced 0.7 percent.

Declining issues outnumbered advancing ones on the Topix by a 2.3-to-1 ratio.

South Korean shares ended slightly lower and the won pared earlier losses to end higher on Friday, reacting calmly to President Donald Trump's cancellation of a summit with North Korea after Pyongyang's measured response to the announcement.

Some market players said they remained hopeful there still will be a summit eventually between Trump and North Korean leader Kim Jong Un.

The Korea Composite Stock Price Index (KOSPI) closed down 0.2 percent at 2,460.80 points. For the week, the index shed 0.7 percent.

The won ended trade at 1,078.0 against the dollar, up 0.2 percent versus Thursday's close of 1,079.6. The currency barely moved on a weekly basis.

North Korea said it hoped for a "Trump-style solution" to resolve the standoff over its nuclear weapons programme.

Seoul-listed stocks linked to North Korea took hits.

Hyundai Elevator, the top shareholder in Hyundai Asan, which operated tours to North Korea's Mount Kumgang, was down 16.8 percent.

Hyundai Rotem, manufacturer of railway vehicles, dropped 19.2 percent. South Korea's railway-related shares had a big rally when leaders of South Korea and China agreed that North Korea should be

guaranteed economic aid if it were to undertake complete denuclearisation.

Hong Kong shares fell on Friday, amid renewed geopolitical worries after U.S. President Donald Trump called off a planned June meeting with North Korean leader Kim Jong Un.

Sentiment is dampened by signs of rising trade tensions as the Trump administration launched a national security investigation into car and truck imports, ahead of U.S. Commerce Secretary Wilbur Ross's visit to China early next month for another round of talks.

The Hang Seng index fell 0.6 percent, to 30,588.04, while the China Enterprises Index lost 0.9 percent, to 12,047.75 points.

The sub-index of the Hang Seng tracking energy shares dipped 3.9 percent while the IT sector dipped 0.74 percent; the financial sector was 0.3 percent lower and property sector dipped 0.17 percent.

The top gainer on Hang Seng was Lenovo Group Ltd, up 6.91 percent, while the biggest loser was CNOOC Ltd, which was down 3.53 percent.

Around the region, MSCI's Asia ex-Japan stock index was firmer by 0.07 percent, while Japan's Nikkei index closed up 0.06 percent.

China's major stock indexes fell on Friday to post their worst week in more than one month, as sentiment soured after U.S. President Donald Trump called off a planned June meeting with North Korean leader Kim Jong Un.

The blue-chip CSI300 index fell 0.3 percent to 3,816.50 points, while the Shanghai Composite Index ended down 0.4 percent at 3,141.30 points.

For the week, SSEC slid 1.6 percent, while CSI300 declined 2.2 percent, posting their worst weekly drops since late April.

Trump on Thursday called off a historic summit with North Korean leader Kim Jong Un scheduled for next month, citing Pyongyang's "open hostility", and warned that the U.S. military was ready in the event of any reckless acts by North Korea. Adding to investor worries about a trade war, the Trump administration has launched a national security investigation into car and truck imports that could lead to new U.S. tariffs similar to those imposed on imported steel and aluminum in March. U.S. Commerce Secretary Wilbur Ross will visit China early next month for another round of talks amid ongoing trade frictions between the world's two largest economies.

Most sectors lost ground on Friday, but consumer and healthcare firms gained, as investors sought shelter in the two defensive sectors.

So far this year, the Shanghai stock index is down 5 percent, the CSI300 has fallen 5.3 percent while China's H-share index listed in Hong Kong is up 3 percent. Shanghai stocks have risen 1.94 percent this month.

As of 07:00 GMT, China's A-shares were trading at a premium of 20.54 percent over the Hong Kong-listed H-shares.

The price-to-earnings ratio of the Shanghai index was 13.55 as of the last full trading day while the dividend yield was 2.3 percent.

So far this week, the market capitalisation of the Shanghai stock index has fallen by -0.92 percent to 32.64 trillion yuan.

CURRENCIES – Daily Outlook

Dollar ends week stronger as commodity-linked peers slip - Reuters News

The dollar rose against a basket of peers on Friday and was on pace to finish the week at its strongest since mid-November, as commodity-linked currencies fell following a slump in oil prices and as political concerns in Italy and Spain hurt the euro.

The dollar index, which measures the greenback against a basket of six currencies, was up 0.44 percent at 94.166, after hitting a high of 94.249, its strongest since mid-November. The index was up 0.6 percent for the week.

Oil prices fell about \$2 on Friday as Saudi Arabia and Russia discussed easing supply curbs that have helped push crude prices to their highest since 2014.

"We are seeing a bit of a rebound on the crosses, particularly against the commodity-linked currencies," said Karl Schamotta, director of global product and market strategy at Cambridge Global Payments.

"That's really, really helping support the U.S. dollar on a trade-weighted basis," he said.

The U.S. dollar was 0.75 percent higher against the Canadian dollar, a more than two-week high. The Australian dollar was 0.37 percent lower against the greenback.

The dollar had been rising for weeks but lost some of its momentum after the Federal Reserve minutes on Wednesday were seen as more dovish than markets had expected.

On Friday, the dollar was supported by data showing new orders for key U.S.-made capital goods increased more than expected in April and shipments rebounded, suggesting that business spending on equipment was picking up after slowing down at the end of the first quarter.

Meanwhile, the euro weakened and was set for a sixth consecutive week of losses as rising bond yields in Italy triggered nervousness among investors, while brewing political instability in Spain also weighed on sentiment.

Spain's socialist leader Pedro Sanchez on Friday said his party would call a snap election if it won the motion it put forward against Prime Minister Mariano Rajoy over a graft case involving members of his People's Party.

The news sparked a sharp sell-off in Spanish bonds and stocks, and provided investors with a fresh incentive to get out of Italian assets, which have been rattled by the prospect of a spendthrift coalition government comprising the anti-establishment 5-Star Movement and far-right League.

"Risk premia are rising across the euro area," said Schamotta. "Market participants are taking the threat of divisions in the euro area more seriously than they have in a long time."

Sterling traded near a five-month low of \$1.33 on Friday, hindered by worries over Brexit and further signs of sustained weakness in Britain's economy. *(Source Reuters, Research – @her1en)*

Precious Metal – *Daily Outlook*

Gold dips slightly as Trump says North Korea talks may continue - Reuters News

Gold prices dropped slightly on Friday, but still remained above \$1,300 per ounce as investors digested news of U.S. President Donald Trump saying a meeting with North Korea's leader could still go ahead.

Spot gold lost 0.1 percent at \$1,303.34 per ounce by 1:38 p.m. EDT (1738 GMT), yet was on track for a weekly gain of 0.9 percent, its biggest since March. Spot gold earlier hit a 10-day high at \$1,307.80.

U.S. gold futures for June delivery settled down 70

cents, or 0.1 percent, at \$1,303.70 per ounce.

"Gold has managed to hold onto a significant chunk of its gains made yesterday despite the U.S. trading conciliatory messages with North Korea again, something which has boosted the global stock markets and the U.S. dollar," said Forex.com analyst Fawad Razaqzada.

Julius Baer analyst Carsten Menke said the uncertainty over the U.S.-North Korea meeting was likely to have only a temporary impact on gold, traditionally used as a safe place to park assets in times of instability.

"Based on this pattern and on gold's very tight relationship with the U.S. dollar, this uplift in price should be temporary and we should fall back below \$1,300 an ounce," he said.

Dollar-priced gold tends to increase when the greenback weakens because this makes it cheaper for buyers with other currencies.

The dollar reached a new 2018 high, helped by North Korea saying it was open to resolving issues with the United States. On Thursday, gold rallied above \$1,300 an ounce after Trump said the meeting with North Korea was off.

Global shares also steadied, reducing the clamor for gold as a safer asset.

Heading into a long holiday weekend in the United States, Dillon Gage's Walter Pehowich said trading activity was virtually mute.

"I expect gold to stay between \$1,300 and \$1,308 for the weekend."

Investors focused on the psychologically important \$1,300 level, MKS trader Samuel Laughlin said, "as a pivot point for near-term price action."

Gold had been trading in a range between about \$1,310 and \$1,360 since hitting a 1-1/2 year high in January but was pushed lower this month by a strengthening dollar and rising U.S. bond yields, which reduce the appeal of non-yielding gold.

Meanwhile, silver lost 0.6 percent at \$16.53 per ounce, headed for a weekly gain of 0.4 percent. It earlier hit \$16.70, a 1-1/2-week high.

Platinum dropped 1.4 percent at \$896 per ounce, but up 1.9 percent on the week, while palladium declined 0.3 percent at \$977.15, set for a 1.7 percent weekly gain.

OIL – Daily Outlook**Oil prices slump as OPEC and Russia consider output boost - Reuters News**

Oil prices fell more than \$2 per barrel on Friday as Saudi Arabia and Russia discussed easing production cuts that have helped push crude prices to their highest since 2014.

Brent crude futures fell \$2.35, or 3 percent, to settle at \$76.44 a barrel. The global benchmark lost about 2.7 percent this week, its largest weekly drop since early April. The contract hit its highest since late 2014 at \$80.50 last week.

U.S. West Texas Intermediate (WTI) crude slumped \$2.83, or 4 percent, to finish at \$67.88 a barrel. For the week, WTI tumbled about 4.9 percent, its biggest loss

since early February, a sharp course reversal after six weeks of gains.

The premium of Brent to WTI hit \$8.75 per barrel in post-settlement trade, its widest since March 2015.

The energy ministers of Russia and Saudi Arabia met in St. Petersburg to review the terms of a global oil supply pact that has been in place for 17 months, ahead of a key OPEC meeting in Vienna next month.

The ministers, along with their counterpart from the United Arab Emirates, discussed an output increase of about 1 million barrels per day (bpd), sources told Reuters.

Russia's energy minister said oil ministers from OPEC states and non-OPEC countries participating in a deal to cut output would likely decide to gradually ease curbs at their meeting in Vienna next month.

"After hitting that \$80 level, which is a psychological level, we were seeing a little bit of a pull-back yesterday, and then rhetoric out of Saudi and Russia has only exacerbated the sell-off today," said Matt Smith, director of commodity research at ClipperData.

Global crude inventories have fallen over the past year because of the OPEC-led cuts, which were boosted by a dramatic drop in Venezuelan production.

The prospect of renewed sanctions on Iran after Trump pulled out of an international nuclear deal with Tehran has further supported prices in recent weeks.

This comes even as U.S. crude production has risen. The United States in February produced 10.3 million bpd, a record.

The U.S. oil rig count, an indicator of future production, rose by 15 to 859 in the week to May 25, the highest level since March 2015, General Electric Co's Baker Hughes energy services firm said.

Hedge funds and other money managers raised their bullish bets on U.S. crude futures and options in the latest week after four consecutive cuts in the net long position, according to data released on Friday.

The increase lifted the wagers from 6-month lows, in the week to May 22, according to data from the U.S. Commodity Futures Trading Commission (CFTC).

The speculator group raised its combined futures and options position in New York and London by 2,009 contracts to 421,916 during the period.
