**Market closes due to Easter holidays and reports made for 2 days ahead 30
March - 02 April 2018**

GLOBAL MARKETS

- Stocks steadied on Thursday, after a woeful week for major technology companies, even as global equities careened towards their first quarterly drop in two years.

GLOBAL ECONOMIES

- Job vacancies in Australia climbed to their highest on record in the three months to February, a seventh straight quarter of solid gains that augured well for continued growth in hiring.
- Growth in China's manufacturing sector likely picked up slightly in March as authorities lifted winter industrial pollution restrictions and steel mills cranked up production as construction activity swings back into high gear.
- Exceptional economic growth and a sustained rebound in inflation provides room for the European Central Bank to dial back stimulus, Dutch policymaker Klaas Knot said, warning the Bank was at risk of normalising policy too slowly.
- Germany's jobless total dropped more than expected in March and unemployment hit a record low, adding impetus to a labour market that has already become the linchpin of a consumer-led upswing.
- Britain's current account deficit fell sharply last year, official data showed on Thursday, potentially easing concerns about its reliance on foreign investors to fund itself as Brexit nears.
- U.S. consumer spending rose marginally for a second straight month in February as households boosted savings, the latest indication that the economy lost momentum in the first quarter.

GLOBAL MARKETS & ECONOMIES

GLOBAL MARKETS

U.S. & Global Markets – Stocks steadied on Thursday, after a woeful week for major technology companies, even as global equities careened towards their first quarterly drop in two years.

Shares tracked by the 47-country MSCI index glided 0.86 percent higher, with Facebook Inc, Apple Inc and Google parent Alphabet Inc retaking the market's leadership mantle.

Despite equities' gains, safe-haven bonds also advanced in price.

The volatile give-and-take during the week and quarter would seem to set the table for tense months ahead as buy-the-dip bulls look for corporate earnings to validate the market's current levels and short-selling bears work to expose investors' complacency.

Yet David Kelly, chief global strategist at JPMorgan Chase & Co's funds division, said he is optimistic that markets have clarified the effects of a large U.S. tax cut and the prospect for higher interest rates, factors he says challenged markets during the first quarter.

"It's not that the uncertainties have gone away on higher rates or lower taxes, but I think we've grown accustomed to them, and that should lay a foundation for investors to put more money to work," he said.

Economic data on Thursday showed U.S. consumer spending rising only marginally, but the number of Americans filing for unemployment benefits dropped to a more than 45-year low last week. Monthly inflation readings moderated.

Those statistics helped keep downward price swings at bay on Thursday after a turbulent start to 2018 in financial markets that is set to end one of the longest quarterly bull runs and included the biggest-ever rise in Wall Street's "fear gauge," the CBOE Volatility Index.

A "melt-up" that sent the MSCI's "all-country" world share index up more than 7 percent in January suddenly melted away as tensions over global trade escalated, turmoil deepened in the White House and market-leading technology firms wobbled on fears of regulation and other issues. The index is down more than 1 percent in price terms this year.

Now, the Dow, S&P 500, FTSE, Nikkei and scores of other major indexes are all also down for the year. And there was little place to hide, with U.S. bond returns also in the red for the quarter.

On Thursday, by contrast, the Dow Jones Industrial Average rose 254.69 points, or 1.07 percent, to 24,103.11, the S&P 500 gained 35.87 points, or 1.38 percent, to 2,640.87 and the Nasdaq Composite added 114.22 points, or 1.64 percent, to 7,063.45.

In Asia, Japan's Nikkei rose 0.6 percent, while Shanghai closed up 1.2 percent and Hong Kong's Hang Seng recovered from an early wobble to add 0.2 percent. The pan-European FTSEurofirst 300 index rose 0.44 percent.

Oil continued its march higher. Benchmark Brent crude rose 1 percent, advancing its gains for the quarter and sidestepping data the day prior showing a surprise build in U.S. crude stockpiles.

Many markets across Europe and the Americas will be closed on the final weekday of the quarter in observance of Good Friday.

A monthly markets poll by Reuters showed trade war and tech sector worries have spooked global investors into cutting equity exposure to a four-month low and holdings of U.S. stocks to the lowest in nearly two years.

Roger Jones, the head of equities at London & Capital, said he hopes the equity market's selloff from its highs is not prolonged.

"The longer this goes, the higher the chance it will start to affect the man in the street," said Jones.

Benchmark 10-year U.S. Treasury notes rose in price to yield 2.741 percent, from 2.775 percent late on Wednesday.

That market action pushed the gap between short- and long-dated Treasury yields to its tightest in a decade. Some investors see the

narrowing as a sign the economy will sputter. In addition to that curve flattening, the quarter was marked by a rise in short-term borrowing costs, reflected in the soaring London interbank offered rate (Libor).

GLOBAL ECONOMIES

Australia – Job vacancies in Australia climbed to their highest on record in the three months to February, a seventh straight quarter of solid gains that augured well for continued growth in hiring.

Total job vacancies rose a seasonally adjusted 4.3 percent to 220,900 in the Dec-Feb quarter, from 211,700 in the previous quarter, data from the Australian Bureau of Statistics showed on Thursday.

That was the highest reading since the series began in 1979 and left vacancies a hefty 19.3 percent higher than a year earlier.

Vacancies in the private sector rose 4.2 percent to 201,500, again the highest on record. That was up 20.7 percent on the previous year.

Analysts look at the vacancies series as it has proved a reliable leading indicator of labour demand and turning points in employment growth.

The strength in vacancies gels with official figures for employment, which showed a surge in jobs over the past year or so, and points to further strength ahead.

China – Growth in China's manufacturing sector likely picked up slightly in March as authorities lifted winter industrial pollution restrictions and steel mills cranked up production as construction activity swings back into high gear.

The official manufacturing Purchasing Managers' Index (PMI) is expected to have risen to 50.5 in March from February's 50.3, according to a median forecast of 29 economists in a Reuters poll. The 50-mark divides expansion from contraction on a monthly basis.

That would mark the 20th straight month of expansion for China's vast manufacturing sector, and reinforce consensus views that the world's second-largest economy will see only a modest slowdown in growth this year.

A separate survey last week by World Economics, a private economic data provider, showed a gauge of sentiment among sales managers jumped to an eight-month high in March, with growth in manufacturing sales hitting a three-year peak.

Driving the positive sentiment are better-than-expected manufacturing output and exports in the first two months of the year, particularly in tech shipments, the fastest-growing segment of China's industrial sector.

Sino-U.S. trade relations will be key to China's manufacturing outlook, with U.S. President Donald Trump threatening to slap tariffs on Chinese tech and telecommunications shipments to the United States.

Similarly, swelling inventories of steel could weigh on future production, following a burst of output in recent months. Steel prices have already tumbled in recent sessions as steel stocks hit multi-year highs.

In the first quarter, Chinese steel companies defied expectations for a winter lull and continued to ramp up output in response to strong sales, and boosted borrowing, capital expenditure and hiring, a survey from the China Beige Book showed on Wednesday.

Euro Zone – Exceptional economic growth and a sustained rebound in inflation provides room for the European Central Bank to dial back stimulus, Dutch policymaker Klaas Knot said, warning the Bank was at risk of normalising policy too slowly.

Considered a hawk on the ECB's Governing Council, Knot said in an interview with Reuters that he was comfortable with market expectations for an end to bond buys in the fourth quarter and a first interest rate hike since mid-2011 in the second quarter of next year.

DISCLAIMER:

All contents of This Report have been prepared by Research Dept. of Valbury Asia Futures and are provided solely for informational purpose. We have taken reasonable measures to ensure the accuracy of the report, however, do not guarantee its accuracy and will not accept liability for any consequential loss or damage which may arise directly or indirectly from any use of the report

He added that he was not overly concerned by recent euro gains and argued that policy tightening should be slow and gradual given high levels of debt.

Having kick-started growth by pushing borrowing costs to rock-bottom levels, ECB policymakers are now considering how and when to end their 2.55 trillion euro (\$3.16 trillion) bond purchase scheme, taking another step in winding down crisis-era stimulus and reverting to conventional policy tools.

Markets expect the ECB to exit the quantitative easing (QE) programme in the fourth quarter, then raise rates in around April or May.

"If you look at the market expectations of our policy action, I would say they have more or less converged at what I call a sweet spot," Knot said. "There is a fair degree of consensus around these expectations."

"I would say the likelihood of us erring on the side of being too cautious is a bit larger than for us being too bold," Knot said as the Dutch central bank - which he heads - presented its annual report.

Knot has been one of the ECB's most prominent opponents of the stimulus measures.

But his comments suggest that, with the Bank having averted the threat of deflation and presided over 20 straight quarters of economic growth, the policy debate is shifting away from bond purchases toward the interest rate path.

The Bank has said it would end bond buys once inflation is on a sustained upward path towards its target of almost 2 percent, which Knot said was not far off.

"I think we are getting relatively close," Knot said, arguing the remaining deviations from such an adjustment are limited, particularly with view to the medium term, the ECB's policy horizon.

Annual euro zone inflation data due on Wednesday is expected to show a rise to 1.4 percent in March.

Moving too slowly on unwinding stimulus could force the ECB to tighten policy quicker later on, potentially boosting market volatility and braking growth by sharply raising the economy's debt burden.

German – Germany's jobless total dropped more than expected in March and unemployment hit a record low, adding impetus to a labour market that has already become the linchpin of a consumer-led upswing.

Household spending has turned into the main source of growth in Europe's biggest economy, propelled by rising employment, inflation-busting pay hikes and low borrowing costs.

Federal Labour Office data on Thursday showed the seasonally adjusted jobless number fell by 19,000 on the month to 2.373 million, more than the 15,000 forecast in a Reuters poll.

Separately, data from the statistics office showed that inflation accelerated more slowly than expected in March, suggesting that price pressures remain fairly moderate despite the broad-based upswing and unprecedented monetary stimulus.

Unemployment dropped to 5.3 percent last month from 5.4 percent in February, the lowest since Germany reunified in 1990.

Employment as measured by the International Labour Organisation climbed to a record 44.59 million in February, seasonally adjusted data from the Federal Statistics Office showed on Thursday.

"The positive development of the labour market continued in March," Labour Office head Detlef Scheele said. He said companies created more jobs with full social benefits and were continuing to look for more staff.

The data showed that Germany's prolonged upswing is now also pushing down the once stubbornly high number of long-term unemployed, which fell by 9 percent on the year to 845,000.

Opposition parties have accused Chancellor Angela Merkel of neglecting the long-term unemployed at a time when German firms are struggling with unprecedented labour shortages.

In the coalition deal signed this month, the centre-left Social Democrats (SPD) persuaded Merkel's conservatives to help integrate the long-term unemployed by creating 150,000 subsidised jobs at a cost of 4 billion euros (\$4.9 billion).

UK – Britain's current account deficit fell sharply last year, official data showed on Thursday, potentially easing concerns about its reliance on foreign investors to fund itself as Brexit nears.

The Office for National Statistics also said Britain's economy grew at its slowest pace in five years in 2017, leaving it the weakest among Group of Seven countries as the decision to leave the European Union pushed up inflation and weighed on consumer spending.

However, there were some more promising signs for 2018 as the dominant services sector picked up a bit in January and economists said they expected that an inflation hit to consumers would ease this year.

The current account deficit stood at 18.4 billion pounds (\$25.9 billion) in the fourth quarter, below all forecasts in a Reuters poll of economists, and the shortfall in the third quarter was revised down sharply.

That left the 2017 deficit at 4.1 percent of GDP, the smallest since 2011 and much lower than a record 5.8 percent in 2016 as the global economic recovery, and the weak value of the pound, boosted earnings on British investment abroad.

"While still too high for comfort, this is a very welcome reduction given that the elevated deficit is a potential source of vulnerability for the UK economy – particularly if there was any major loss of investor confidence in the UK," Howard Archer, an economist with EY Item Club, a forecasting group, said.

Victoria Clarke, at Investec, said it was too early to say the deficit would improve steadily.

Bank of England Governor Mark Carney has said Britain's balance of payments shortfall leaves it reliant on the "kindness of strangers".

The country's official budget forecasters expect the gap to fall only slowly and they warned this month that the confidence of overseas investors could be damaged without a smooth Brexit.

U.S. – U.S. consumer spending rose marginally for a second straight month in February as households boosted savings, the latest indication that the economy lost momentum in the first quarter.

But the economy's fundamentals remain strong, with other data on Thursday showing the number of Americans filing for unemployment benefits dropping to more than a 45-year low last week. A tightening labor market is expected to start driving up wages by the second half of this year.

Consumer spending has been tepid this year despite strong consumer confidence, which has been bolstered by income tax cuts. Some economists said the tax cuts, which came into effect in January, only reflected on most workers' paychecks in late February. They also believed that delays in processing tax refunds had contributed to holding back spending.

"The outlook for spending on discretionary categories is obviously more uncertain, though there are some plausible reasons to expect better consumption outcomes ahead," said Michael Feroli, an economist at JPMorgan in New York.

"Relative to years past, tax refunds were paid out slower at the start of this year."

The Commerce Department said consumer spending, which accounts for more than two-thirds of U.S. economic activity, increased 0.2 percent last month after a similar gain in January. It was supported by a rebound in spending on long-lasting goods, such as motor vehicles, as was a rise in financial services and insurance expenditures.

The increase in consumer spending in February was in line with economists' expectations.

There was also a moderation in monthly inflation readings after prices pushed higher in January. The personal consumption expenditures (PCE) price index excluding the volatile food and energy components rose 0.2 percent last month after advancing 0.3 percent in January.

That lifted the year-on-year increase in the so-called core PCE price index to 1.6 percent, the biggest gain since February 2017, from 1.5 percent in January. The core PCE index is the Federal Reserve's preferred inflation measure. It has been below the U.S. central bank's 2 percent target since mid-2012.

Economists believe the annual core PCE price index could accelerate to 1.9 percent in March as last year's weak readings drop out of the calculation. The Fed raised interest rates last week and forecast at least two more rate hikes this year. "Policymakers can be confident about the inflation outlook and will likely keep with the plan to raise rates a couple more times this year," said Chris

Rupkey, chief economist at MUFG in New York. "Inflation is not heating up, but pressures are building.

The dollar was little changed against a basket of currencies while stocks on Wall Street were trading higher. Prices of U.S. government bonds rose.

ASIAN STOCK INDEX

Japan's Nikkei share average rose on Thursday, helped by gains in domestic-demand stocks, but Takeda Pharmaceutical stumbled after it said it was considering a bid for London-listed Shire that could top \$40 billion.

The Nikkei ended 0.6 percent higher at 21,159.08. Retail and food stocks gained ground, although tech shares came under pressure as they tracked a weakness in their Wall Street counterparts.

All three major U.S. indexes ended lower after a rocky session on Wednesday as gains in consumer staples and healthcare were offset by a sharp drop in Amazon shares and a continuing slide in technology stocks.

Seven & i Holdings gained 1.5 percent, Lawson advanced 1.4 percent and alcohol beverage maker Asahi Group Holdings rose 3.5 percent.

However, Takeda fell 7.5 percent after it said it was at a "preliminary and exploratory stage" of considering a bid for Shire, adding it had not approached Shire's board.

Shire, which sells treatments for rare diseases and attention deficit disorder, said it noted Takeda's statement, and confirmed it had not received an approach.

"Investors are worried that the deal would cause a big debt burden on Takeda, whose market capitalisation is smaller than Shire," said a market strategist in Tokyo.

"It's a bold endeavour ... it's like a snake trying to swallow its bigger rival and that image is scaring investors. That's not common in Japan."

Tech shares were pressured, with semiconductor equipment makers Tokyo Electron falling 1.9 percent and Advantest Corp shedding 1.0 percent.

The broader Topix advanced 0.3 percent to 1,704.00.

South Korean KOSPI stock index extended gains on Thursday. The Korean won edged higher in the local platform against the dollar.

At 06:30 GMT, the KOSPI closed higher 17.08 points or 0.71 percent at 2,436.37. The benchmark index extended gains following gains in Chinese stock markets. Seoul's announcement that South Korea and North Korea agreed to hold summit in April, also cheered market sentiment.

The won was quoted at 1,065.9 per dollar on the onshore settlement platform, 0.46 percent firmer than its previous close at 1,070.8.

In offshore trading, the won was quoted at 1,064.44 per U.S. dollar, down 0.08 percent from the previous day, while in one-year non-deliverable forwards it fetched 1,051.8 per dollar.

MSCI's broadest index of Asia-Pacific shares outside Japan was up 0.28 percent, after U.S. stocks ended the previous session with losses. Japanese stocks rose 0.61 percent.

The KOSPI is down around 2.0 percent so far this year, and down by 2.35 percent in the previous 30 days.

The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won.

The trading volume during the session on the KOSPI index was 328,140,000 shares, and of the total traded issues of 887, the number of advancing shares was 447.

In money and debt markets, June futures on three-year treasury bonds rose 0.01 points to 107.68.

The Korean 3-month Certificate of Deposit benchmark rate was quoted at 1.65 percent, while the benchmark 3-year Korean treasury

bond yielded 2.228 percent, higher than the previous day's 2.22 percent.

Hong Kong stocks ended higher amid perceived progress on North Korea issues, though caution lingered as investors continued to watch the development of China-U.S. trade spat.

At close of trade, the Hang Seng index closed 0.2 percent up at 30,093.38, while the Hang Seng China Enterprises index was flat at 1198.34.

North and South Korea will hold their first summit in more than a decade on April 27, South Korean officials said on Thursday, after North Korean leader Kim Jong Un pledged his commitment to denuclearisation as tensions ease between the old foes.

Japan has sounded out the North Korean government about a bilateral summit, and Pyongyang has discussed the possibility of a leaders' meeting with Japan and other countries, Japan's Asahi newspaper said on Thursday.

However, caution lingered as investors kept an eye on developments regarding the ongoing Sino-U.S. trade spat.

U.S. President Donald Trump's tariffs on Chinese goods may not be imposed until early June, administration officials said on Wednesday, with public consultations and potential tariff revisions buying time for negotiations to forestall them.

China warned the United States on Thursday not to open a Pandora's Box and spark a flurry of protectionist practices across the globe, even as Beijing pointed to U.S. goods that it could target in a deepening Sino-U.S. trade dispute.

China stocks reversed losses from earlier in the session to end higher on Thursday, as investors hunted for bargains after a recent correction in shares of real estate and consumer firms.

At the close, the Shanghai Composite index was up 1.2 percent at 3,160.53, while the blue-chip CSI300 index was up 1.3 percent at 3,894.05.

The smaller Shenzhen index ended up 1 percent and the start-up board ChiNext Composite index was higher by 0.4 percent.

The rebound was led by a 5.5 percent surge in real estate stocks, with top developer China Vanke closing up 9 percent. Consumer firms also rallied strongly, led by liquor maker Lao Jiao rising 7.4 percent.

Market participants were also keeping an eye on developments regarding the ongoing Sino-U.S. trade spat.

U.S. President Donald Trump's tariffs on Chinese goods may not be imposed until early June, administration officials said on Wednesday, with public consultations and potential tariff revisions buying time for negotiations to forestall them.

China warned the United States on Thursday not to open a Pandora's Box and spark a flurry of protectionist practices across the globe, even as Beijing pointed to U.S. goods that it could target in a deepening Sino-U.S. trade dispute.

China could target a broad range of U.S. businesses from agriculture to aircraft, autos, semiconductors and even services if the trade conflict escalates, the official China Daily newspaper said in an editorial on Thursday.

Financial shares held steady, after Chinese President Xi Jinping and other top officials approved new regulations for the country's \$15 trillion asset management sector.

CURRENCIES – Daily Outlook

Dollar flat as rally fizzles ahead of Easter weekend - Reuters News

The dollar was little changed against a basket of currencies on Thursday, as its rebound from a five-week low, touched earlier this week, ran out of steam amid subdued trading activity ahead of the long Easter weekend in many of the world's largest trading centers.

The dollar index, which measures the greenback against a basket of six other major currencies, was about flat on the day at 90.062. The index was down more than 2 percent for the quarter, its fifth straight quarter of declines.

"It's pretty quiet trading. We are coming into the tail end of a shortened week for most people," said Shaun Osborne, chief FX strategist at Scotiabank in Toronto.

"I think a lot of the month-end and quarter-end flows probably went through earlier this week just because everyone was looking at today and thinking it was likely to be a thinly traded day," Osborne added.

The dollar index rose to a one-week high on Wednesday, helped by end-of-month and end-of-quarter rebalancing of portfolios by global asset and fund managers, which tends to be dollar-supportive.

"A lot of the strength we have seen this week is likely to unwind to a large extent next week and beyond," Osborne said.

Trading on Friday and Monday are likely to be subdued, said Vassili Serebriakov, currency strategist at Credit Agricole in New York.

"It's the usual Easter effect," he said.

Data on Thursday showed U.S. consumer spending rose marginally for a second straight month in February as households boosted savings, the latest indication that the economy lost momentum in the first quarter.

But the economy's fundamentals remained strong, with other data on Thursday showing the number of Americans filing for unemployment benefits dropping to more than a 45-year low last week.

"I don't think there was any kind of particular surprise," said Serebriakov.

"That's why we didn't see a lot of moves in either rates or forex," Serebriakov added.

"We are also a bit more sensitive to what's going on in equities and on the trade front as well, so maybe the bar for data surprises is a little bit higher," Serebriakov said.

Global markets were shaken this month when U.S. President Donald Trump moved to impose tariffs on Chinese goods, and Beijing threatened similar measures. But fears of a full-blown trade war have eased on hopes that negotiations can bring a compromise.

The greenback was 0.33 percent lower against the yen, after rising 1.4 percent over the previous two sessions.

The euro rose against the dollar as stronger-than-expected German unemployment data pointed to continued strength in the euro zone's largest economy, but the currency failed to hold gains and was trading little changed on the day.

Sterling edged down as end-of-quarter portfolio rebalancing by investors outweighed encouraging economic data, but the currency is still set for its best quarter against the dollar in almost three years. [nL8N1RB5PB]

The Canadian dollar rose against its U.S. counterpart as firmer stock prices offset data showing the domestic economy unexpectedly contracted at the start of the year. [\(Source Reuters, Research – @her1en\)](#)

Precious Metal – *Daily Outlook*

Gold slips on steady dollar, but political tensions support - Reuters News

Gold prices slipped on Thursday as the U.S. dollar held its strong gains from the previous session, but simmering tensions over Russia and a potential trade war offered underlying support.

Gold posted its biggest one-day percentage fall in nearly nine months on Wednesday after robust U.S. data lifted the dollar, which steadied at those strong levels on Thursday.

Spot gold dipped 0.1 percent to \$1,323.19 per ounce by 1:38 p.m. EDT (1738 GMT), after hitting \$1,321.21 its lowest level since March 21.

U.S. gold futures for June delivery settled down

\$2.70, or 0.2 percent, at \$1,327.30 per ounce.

"There was an easing of tensions in the Far East regarding North Korea, but there's still tension between the West and Russia ... this can boil over again and support gold," said Carsten Fritsch, commodity analyst at Commerzbank in Frankfurt.

North Korea and South Korea will hold their first summit in more than a decade on April 27, South Korean officials said.

Moscow threatened to retaliate after the United States and other Western countries expelled more than 100 Russian diplomats over the poisoning of Russian former double agent Sergei Skripal and his daughter in England with a military-grade nerve toxin.

Concerns about a global trade war have eased but that does not mean it is over, said Brian Lan, managing director at dealer GoldSilver Central in Singapore.

Often seen as an alternative investment at times of political and financial uncertainty, gold was on track for a third straight quarter of gains, up 1.6 percent so far.

United States precious metals markets will be closed on Friday for the Good Friday holiday.

Meanwhile, spot silver was up 0.25 percent at \$16.30 per ounce after falling to \$16.20, a one-week low.

Silver was on track to post a quarterly loss of 3.7 percent after two quarters of modest gains.

Platinum dropped 0.3 percent to \$928.50 per ounce, after hitting \$922.50, the weakest level since late December. The metal was down about 5.4 percent so far this month, on course to post its worst month since September.

Palladium lost 2.1 percent to \$945.75 per ounce, earlier hitting \$938.22, its lowest level since Oct. 11, and was set to fall more than 9 percent this month, the steepest drop since December 2016.

"Speculators had been quite bullish in palladium for a while, now paring back bets since palladium came down from recent highs," said Daniel Ghali, commodities strategist at TD Securities.

For the quarter, palladium dropped 10.6 percent, its biggest quarterly loss since the end of December 2015.

OIL – Daily Outlook**Oil prices rise with Wall Street; U.S. crude discount widens - Reuters News**

Oil prices rose on Thursday as the equities markets rallied and as market participants weighed a rise in U.S. crude inventories and production against continued OPEC supply curbs. Prices for the more actively traded June Brent crude futures were up 58 cents to settle at \$69.34, while the May contract expiring on Thursday was up 74 cents at \$70.27.

West Texas Intermediate (WTI) crude futures gained 56 cents to settle at \$64.94.

WTI's discount to Brent has grown to more than \$5 a barrel, the biggest since January, making Brent-linked crudes less attractive to refiners.

Oil has risen about 4 percent since January, on track for the longest stretch of quarterly gains since late 2010.

"The equities market is rallying and that's lending support to oil," said Philip Streible, senior market strategist at RJO Futures in Chicago. All three major U.S. stock indexes were positive on Thursday.

The dollar against a basket of currencies was flat on Thursday, which was supportive for crude prices, said Streible. A weaker greenback makes dollar-denominated commodities cheaper for holders of other currencies.

Strong compliance on supply cuts from members of The Organization of the Petroleum Exporting Countries (OPEC) and allies like Russia have pushed up prices. OPEC sources said the group and its allies are likely to keep their deal on cutting output for the rest of 2018.

But growing supply in the United States is pressuring prices. Commercial U.S. stocks rose 1.6 million barrels in the past week, while output hit a record 10.43 million barrels per day (bpd).

"I looked at the inventory report as not bearish," said Bill Baruch, president of Blue Line Futures in Chicago. "We actually drew down more from products than from crude."

Geopolitical concerns, especially tensions between Saudi Arabia and Iran, continued to prop up the market, said Gene McGillian manager of market research at Tradition Energy in Stamford. Meanwhile, "worries about demand being affected by a possible trade war kind of receded," he said.

But, the gains may be fragile, said Petromatrix strategist Olivier Jakob.

"The price action last week was pretty clear. The objective on that move was to take out the highs of 2018, but that has not been done and the price action of the last three days has not been very convincing."

The Shanghai crude oil futures contract launched on Monday and has lost about 8 percent since opening.

On Thursday, Reuters reported that China was taking its first steps to pay for imported crude oil in yuan instead of the U.S. dollar. [\(Source Reuters, Research – @her1en\)](#)
