GLOBAL MARKETS

- World stocks declined in their biggest two-day dive in 16 months on Tuesday as tumbling oil prices and a jump in global borrowing costs cooled the year's euphoric start in financial markets.

GLOBAL ECONOMIES

- Australian business conditions remained buoyant in December with both profits and sales healthy, while a pick up in confidence was positive for the investment outlook, a survey reported on Tuesday.
- China's manufacturing sector likely expanded at a slightly slower pace in January as the government's punishing war on air pollution and a cooling property market dampened activity, a Reuters poll showed.
- Japan's job market is the tightest it's been in more than 40 years, giving leverage to labour unions pressing for bigger pay hikes at annual wage negotiations and raising prospects for higher consumer spending and inflation.
- The euro zone economy expanded at its fastest rate in a decade in 2017, preliminary data showed on Tuesday, and sentiment remained high at the start of 2018 despite a slight dip from a 17-year peak, signalling a strong start to the year.
- Britain's housing market lost momentum last month as lenders approved the fewest mortgages in nearly three years following the Bank of England's first interest rate hike since the global financial crisis.
- President Donald Trump, battling a probe into his campaign's alleged ties with Russia and struggling to sell Americans on his leadership abilities, will take credit for U.S. economic gains in the past year in an address to Congress on Tuesday night.

GLOBAL MARKETS

U.S. & Global Markets – World stocks declined in their biggest two-day dive in 16 months on Tuesday as tumbling oil prices and a jump in global borrowing costs cooled the year's euphoric start in financial markets.

Lackluster German inflation curbed a rise in U.S. Treasury yields - the benchmark for world lending rates - after they touched their strongest level in nearly four years overnight at 2.733 percent.

Stocks on Wall Street shed about 1 percent, led by a plunge in healthcare-related companies after Amazon.com, Berkshire Hathaway and JPMorgan said they plan to form a venture to cut healthcare costs for their U.S. employees.

Healthcare tumbled 2.13 percent, the biggest decline among the 11 major S&P 500 sectors.

Health insurer UnitedHealth and drugmaker Pfizer were among the top five decliners in the S&P 500, falling 4.35 percent and 3.13 percent, respectively.

Pfizer had gained about 2 percent in pre-market trading after the company's quarterly results and full-year forecasts beat expectations.

Stocks were also pulled lower by a decline in energy shares amid ongoing evidence of rising U.S. crude output.

The S&P energy sector fell 2.0 percent.

Investors were spooked by the first two-day decline on Wall Street so far this year, which prompted a flight to the safety of U.S. government bonds, said Gennadiy Goldberg, interest rates strategist at TD Securities in New York.

Investors awaited President Donald Trump's first State of the Union address to Congress Tuesday night, a Federal Reserve statement on Wednesday and a jobs report on Friday that serves as a key barometer of the U.S. economy.

The Fed will be watched for comments that could quicken the pace of expected interest rate hikes this year as the inflation outlook has firmed in recent readings.

"Investors are getting a bit worried about inflation, which has led some people to believe that the Fed might be more aggressive when it comes to raising rates," said Robert Pavlik, chief investment strategist at SlateStone Wealth.

"Despite this selloff, all indications point to a firming economy and I do expect to see some bargain hunters step in soon," Pavlik said.

It was largest two-day decline for both the Dow and MSCI's gauge of worldwide stock performance since September 2016. The S&P 500 is still up 5.5 percent in January.

On Wall Street, the Dow Jones Industrial Average fell 362.59 points, or 1.37 percent, to 26,076.89. The S&P 500 lost 31.1 points, or 1.09 percent, to 2,822.43 and the Nasdaq Composite dropped 64.02 points, or 0.86 percent, to 7,402.48.

The pan-European FTSEurofirst 300 index closed down 0.83 percent and MSCI's all-country world stock index shed 0.99 percent. MSCI's emerging markets index fell 1.6 percent.

Benchmark 10-year U.S. Treasury notes fell 5/32 in price to yield 2.7199 percent.

Germany's 10-year bond fell to 0.68 percent, down about 1 basis point on the day. After going positive for the first time since late 2015 on Monday, five-year German bond yields slipped back into negative territory.

The dollar reversed Monday's gains. After six straight weekly declines, the dollar index was on track to fall about 3.4 percent for the month, which would be its biggest monthly fall since March 2016.

The dollar index fell 0.12 percent, with the euro up 0.14 percent to \$1.2398. The Japanese yen strengthened 0.17 percent versus the greenback at 108.80 per dollar. [\(Source Reuters – @her1en\)](#)

GLOBAL ECONOMIES

Australia – Australian business conditions remained buoyant in December with both profits and sales healthy, while a pick up in confidence was positive for the investment outlook, a survey reported on Tuesday.

National Australia Bank's index of business conditions held steady at a seasonally adjusted +13 in December, staying well above the long-run average of +5.

The survey's measure of profitability ticked up a point to +15 in December, while its sales index rose a point to +18. Its often volatile measure of business confidence bounced 4 points to +11, the highest reading since July.

"This has helped to narrow the perplexing gap between business conditions and confidence evident over the past couple of years, and is an encouraging signal for investment," said NAB group chief economist Alan Oster.

NAB's survey of more than 400 firms had also been running much hotter than measures of household confidence, though that has changed in the past month or so with the consumer mood brightening amid strong jobs growth.

The NAB measure of employment did dip a point to +6 in December, but that still points to strong jobs growth of around 300,000 a year.

Among sectors, construction firms reported booming conditions thanks to strength in public investment and housing, while mining had stopped being a drag on conditions and was now enjoying above-average activity.

The retail industry, however, remained in the doldrums due to intense competition and was the only sector to report negative conditions at -2.

"Final retail prices also weakened sharply in December into negative territory, and are running at a slower rate than labour costs and purchases costs, pointing to margin compression," said Oster.

The drop in prices could point to a downside risk for the government's fourth-quarter inflation report due on Wednesday.

China – China's manufacturing sector likely expanded at a slightly slower pace in January as the government's punishing war on air pollution and a cooling property market dampened activity, a Reuters poll showed.

But the pace of expansion is expected to remain relatively healthy, reinforcing analysts' views that the world's second-largest economy will see only a modest slowdown in growth this year after a forecast-beating 2017.

The official manufacturing Purchasing Managers' Index (PMI) on Wednesday is expected to dip marginally to 51.5 for January from 51.6 in December, according to a median forecast of 42 economists polled by Reuters.

That would mark the 19th straight month of expansion for China's manufacturers, who are posting their strongest profits in six years thanks to a prolonged building boom and resurgent export demand.

The 50-mark divides expansion from contraction on a monthly basis.

"We still think the overall economy is slowing, with growth in exports, retail sales and real estate investment all showing signs of fatigue," said Yang Zhao, chief China economist at Nomura.

China is also expected to continue a wide-ranging crackdown this year on riskier types of financing and debt. The campaign is slowly pushing up companies' borrowing costs and making it harder and more expensive for weaker firms to raise funds.

The vice central bank governor said this week the country may step up regulatory efforts by including shadow banking, property financing and internet financing in its macro-prudential assessment (MPA), which is used to help gauge the health of the country's banks.

A slowdown has already started to take hold in the manufacturing sector in the last few months.

Pollution restrictions have forced some "smokestack" industries to reduce output over the winter, while China's export and import growth slowed in December after surging in the previous month.

Economists polled by Reuters expected China's economic growth will moderate to around 6.5 percent this year from 6.9 percent in 2017.

"In the short term, we think the slowdown (in industrial activity) is still quite moderate, as what we have seen with rather gradual softening in real estate," Zhao said.

Economists expect a private survey on China's factory activity on Thursday will show a similar trend as the official reading, with activity in January expanding at slightly slower but still solid pace.

They predict the private Caixin/Markit Manufacturing Purchasing Managers' index (PMI) will be 51.3 in January versus 51.5 the previous month.

The private survey tends to focus on small and mid-sized firms, which have not benefited as much from a year-long, state-led construction boom as large, government-owned industrial heavyweights.

The official PMI survey will be published on Jan. 31, along with a similar official survey covering the services sector.

The private Caixin PMI will be published on Feb. 1, with the Caixin services PMI to be released on Feb. 5.

Japan – Japan's job market is the tightest it's been in more than 40 years, giving leverage to labour unions pressing for bigger pay hikes at annual wage negotiations and raising prospects for higher consumer spending and inflation.

The employment data along with solid retail figures released on Tuesday were the latest in a string of upbeat numbers on Japan's economy, the world's third-largest, which has been humming along nicely in the past year.

Persistently low inflation remains one of the few irritants for policymakers, though. Prime Minister Shinzo Abe has been urging companies to raise wages 3 percent at spring labour talks to spur consumption and lift inflation toward the Bank of Japan's 2 percent target.

"The economy has given us a tailwind heading into this year's wage negotiations," said Norishio Hashiguchi, head of wage negotiations at Zenroren, a union for workers at mid-sized firms. "Unions still have to submit their requests and negotiate hard, but I think we can get higher wages."

The jobs-to-applicants ratio rose to 1.59 in December from 1.56, the highest since January 1974, labour ministry data showed. That means there were nearly 1.6 jobs for every applicant.

Retail sales jumped 3.6 percent in December from a year earlier, separate data showed, beating expectations and the biggest increase since April 2015. Household spending, meanwhile, dipped 0.1 percent in December from a year earlier.

Japan has notched seven straight quarters of growth, its longest stretch since 1994. Exports are strong, corporate profits are setting records and Japanese stocks are at their highest in 26 years - although they dropped Tuesday.

The bright outlook is welcome news for the BOJ, which has been pump priming the economy with massive stimulus since 2013.

Still, many firms remain very reluctant to commit to a hike in fixed costs like wages. A Reuters survey last month showed that two-thirds of Japanese companies think the government's push to raise wages by 3 percent is a tall order, with some dismissing it out of hand,

Euro Zone – The euro zone economy expanded at its fastest rate in a decade in 2017, preliminary data showed on Tuesday, and sentiment remained high at the start of 2018 despite a slight dip from a 17-year peak, signalling a strong start to the year.

The European Union's statistics office Eurostat estimated gross domestic product in the 19 countries sharing the euro rose 0.6 percent quarter-on-quarter in the last three months of 2017, as expected by economists polled by Reuters, for a 2.7 percent year-on-year gain.

Overall in 2017, euro zone GDP rose 2.5 percent, Eurostat said, the fastest growth rate since a 3.0 percent rise in 2007.

"It seems that the euro zone economy continues to fire on all cylinders. Investment has yet to fully recover from the crisis but has been an essential contributor to growth during the year," said Bert Colijn, economist at ING bank.

"However, the big question for 2018 is whether the stronger euro will offset the effects of improving external demand. The high growth in Q4 means that the carry-over effect for 2018 is very favourable. We expect euro zone GDP growth to come in at 2.4 percent again this year."

Eurostat also revised upwards growth data for the third quarter to 0.7 percent quarter-on-quarter from the previously reported 0.6 percent, and to 2.8 percent year-on-year from 2.6 percent.

Separately, European Commission data showed economic sentiment in the euro zone eased slightly in January to 114.7 from a 17-year high of 115.1 reached in December.

This was a result of a slight decline in sentiment in the retail trade sector, where the mood declined to 5.0 from 6.0 in December and in services, where it declined to 16.7 from 18.0.

But optimism in industry remained steady at the December new high of 8.8 and consumers were more upbeat at 1.3 points in January against 0.5 in December, signalling the positive trends from late 2017 were continuing.

"This confirms our view of a strong start to the year although downside risks to the outlook deserve mention," Colijn said.

"Political risk like the German coalition talks and Italian elections could have a significant impact on the economic outlook, and at the same time, optimism about growth could tighten financial conditions further," he said.

"Still, with businesses indicating that new orders continue to increase, it seems to be a safe bet that the euro zone economy will continue to perform well in the months ahead."

U.K – Britain's housing market lost momentum last month as lenders approved the fewest mortgages in nearly three years following the Bank of England's first interest rate hike since the global financial crisis.

At the same time, lending to consumers - something the BoE is watching closely - sped up for the first time in four months.

Britain's economy lagged behind stronger growth in much of the rest of the world last year as the rise in inflation triggered by June 2016's Brexit vote and weak wage growth ate into households' disposable income.

Tuesday's data showed the biggest rise in the interest rate on existing mortgages since 2010. That spells further weakness in the housing market during 2018 when the BoE is expected to raise interest rates again, economists said.

"While the increase in interest rates in November was just 0.25 percent and mortgage rates are still at historically very low levels, there does appear to have been some impact on house buyers' psychology," said Howard Archer of economic consultants EY Item Club.

The BoE will signal next week whether it is likely to raise rates again in May or wait for clearer signs of what kind of trade deal Prime Minister Theresa May is likely to extract from the European Union.

A government report seen by BuzzFeed News on Monday showed Britain will be worse off under each of three broad scenarios for the country's future relations with the EU than if it stayed in the bloc.

The BoE said the number of mortgages approved for house purchase fell to 61,039, the lowest since January 2015, from 64,712 in November and below the median forecast in a Reuters poll of economists for a drop to 63,500.

But consumer lending increased by a stronger than expected 1.52 billion pounds (\$2.15 billion) in December, pushing up the yearly growth rate to 9.5 percent from November's 9.3 percent.

Consumer credit growth had been slowing gradually since it peaked at nearly 11 percent in November 2016.

Net mortgage lending also rose by a stronger than expected 3.68 billion pounds.

The BoE has said there is no British debt bubble but has told banks to set aside more money against the risk of bad loans.

After a Christmas holiday marked by tight spending by consumers, there were signs that households felt a bit more optimistic in early 2018, possibly encouraged by signs that inflation has peaked and wage growth might gather pace.

Consumer confidence rose at the fastest pace in a year in January, polling firm YouGov and the Centre for Economics and Business Research, a consultancy, said.

A separate survey published by the European Commission showed British consumer confidence in January was its strongest since March 2017.

U.S – President Donald Trump, battling a probe into his campaign's alleged ties with Russia and struggling to sell Americans on his leadership abilities, will take credit for U.S. economic gains in the past year in an address to Congress on Tuesday night.

Facing a deadline on an immigration controversy and strong Democratic opposition, Trump will also call for a bipartisan compromise of the type that has eluded him during a turbulent first year in office marked by partisan battles.

Trump will visit Capitol Hill to deliver his first State of the Union speech at 9:10 p.m. (0210 GMT on Wednesday).

Aides said the Republican president would use the televised speech to tout the benefits of a tax overhaul approved by the Republican-controlled Congress in December that was his first major legislative victory.

"The economy will be front and center," White House spokeswoman Sarah Sanders told NBC News on Tuesday.

The atmosphere in the House of Representatives chamber where Trump will speak could be tense. Several Democratic lawmakers have said they would boycott the event. Some Democratic women who will attend plan to wear black in support of the #MeToo movement against sexual harassment.

Ahead of Trump's speech, Republicans and Democrats were deeply divided over immigration. Lawmakers are facing a Feb. 8 deadline to reach a compromise on the issue and pass a new budget measure to avoid a second government shutdown.

To attract Democratic votes for an immigration deal, Trump has said he is open to letting "Dreamers," a group of immigrants brought into the country illegally as children, stay in the United States.

In return, he has demanded funding for a wall on the border with Mexico and measures to curb family sponsorship of immigrants, proposals that have failed to gain traction with Democrats in the past.

U.S. Senator Dick Durbin, the No. 2 Democrat in the Senate, said so far the two sides had made little progress in bridging differences on immigration.

"We didn't agree on anything," Durbin said after a meeting with Republican lawmakers on Capitol Hill on Monday.

ASIAN STOCK INDEX

Japan's Nikkei share average dropped to a one-month low on Tuesday, led by weakness in Apple suppliers, while mining shares underperformed on lower oil prices.

The Nikkei ended 1.4 percent lower at 23,291.97, the lowest closing level since Dec. 29.

Apple Inc suppliers lost ground after the iPhone maker's shares fell 2.1 percent on news that it will halve production of its \$999 iPhone X.

Murata Manufacturing and Taiyo Yuden both shed 1.9 percent.

Inpex Corp dropped 2.6 percent and Japan Petroleum Exploration Co tumbled 6.1 percent after U.S. oil prices slipped on Tuesday, extending losses into a second session, as a strengthening dollar sapped demand for crude, while rising U.S. output helped dampen prices.

The broader Topix fell 1.2 percent to 1,858.13, with all of its 33 subsectors in negative territory.

South Korea's KOSPI stock index marked further losses on Tuesday. The Korean won closed at its lowest since Dec. 27, while bond yields rose.

At 06:30 GMT, the KOSPI was down 30.40 points or 1.17 percent at 2,567.79. The index extended losses as investment sentiment was hurt after the greenback gained, tracking higher U.S. bond yields.

The won was quoted at 1,073.6 per dollar on the onshore settlement platform, 0.75 percent weaker than its previous close at 1,065.6. The currency was negatively affected by a slide in stock markets as demand for won among foreign investors declined.

In offshore trading, the won was quoted at 1,073.05 per U.S. dollar, down 0.29 percent from the previous day, while in one-year non-deliverable forwards it was being transacted at 1,064.05 per dollar.

MSCI's broadest index of Asia-Pacific shares outside Japan was down 1.27 percent, after U.S. stocks ended the previous session with mild losses. Japanese stocks weakened 1.43 percent.

The KOSPI is up around 5.3 percent so far this year, and up by 4.74 percent in the previous 30 days.

Hang Seng posted its biggest one-day loss in six weeks on Tuesday, as Wall Street weakness in the wake of a spike in global bond yields prompted investors to lock in profit in high-flying Hong Kong stocks.

At close of trade, the Hang Seng index was down 359.60 points, or 1.09 percent, at 32,607.29. The Hang Seng China Enterprises index fell 1.98 percent to 13,389.38.

China's main Shanghai Composite index closed down 0.99 percent at 3,488.1888 points while its blue-chip CSI300 index ended down 1.07 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 1.37 percent while Japan's Nikkei index closed down 1.43 percent.

The yuan was quoted at 6.3398 per U.S. dollar at 08:10 GMT, 0.1 percent firmer than the previous close of 6.346.

As of the previous trading session, the Hang Seng index was up 10.19 percent this year, while China's H-share index was up 16.7 percent.

China stocks extended losses on Tuesday, led by real estate and banking firms, as investors pocketed gains after a selloff in Apple shares knocked Wall Street.

At the close, the Shanghai Composite index was down 34.81 points, or 0.99 percent, at 3,488.19.

The blue-chip CSI300 index was down 1.07 percent, with its financial sector sub-index lower by 1.67 percent, the consumer staples sector down 0.19 percent, the real estate index down 3.97 percent and healthcare sub-index down 0.02 percent.

The smaller Shenzhen index ended down 0.53 percent and the start-up board ChiNext Composite index was weaker by 0.96 percent.

Around the region, MSCI's Asia ex-Japan stock index was weaker by 1.31 percent while Japan's Nikkei index closed down 1.43 percent.

At 07:04 GMT, the yuan was quoted at 6.3355 per U.S. dollar, 0.17 percent firmer than the previous close of 6.346.

So far this year, the Shanghai stock index is up 6.53 percent, the CSI300 is up 5.6 percent this year, while China's H-share index listed in Hong Kong is up 16.7 percent.

CURRENCIES – Daily Outlook**Dollar reverses gains as Fed meeting starts, euro, yen strengthen - Reuters News**

The dollar fell on Tuesday, reversing its gains from the day before, ahead of a Federal Reserve monetary policy decision on Wednesday, while the euro and the Japanese yen strengthened against the greenback.

After six straight weekly declines, the dollar index was on track to fall about 3.2 percent for the month, which would be its biggest monthly fall since March 2016.

Traders are cautious ahead of a slate of events this week, including the U.S. Federal Reserve's two-day monetary policy meeting and a U.S. jobs report on Friday that will include data

on nonfarm payrolls and average hourly earnings. The Fed began its meeting on Tuesday.

"We're just kind of jobbing around in wait of the Fed tomorrow," said Greg Anderson, a global head of FX strategy at BMO Capital Markets in New York.

Analysts expect the Fed to hold interest rates steady at the end of the meeting on Wednesday, but strike a hawkish tone in its statement, which would typically be positive for the dollar.

A spike in global bond yields, with 10-year U.S. bond yields pushing well above 2.70 percent, their highest since April 2014, prompted some investors to cut some short positions and pushed the dollar higher on Monday.

While yields fell overnight, benchmark U.S. 10-year yields, which move inversely to prices, touched their highest in nearly four years later on Tuesday, and 30-year yields climbed to their highest since May 2017.

"The dollar has been tracking treasury yields to some extent," said David Gilmore, a partner at Foreign Exchange Analytics in Connecticut.

"That certainly hasn't been a consistent correlation in the last several weeks, but I think that's what's happening today."

The dollar pared losses throughout the day and was last down 0.10 percent against a basket of six major currencies at 89.219 at 3:34 p.m. ET (2034 GMT). The index pulled up from a low of around 88.43 set last week, its weakest level since December 2014.

The euro gained 0.11 percent to \$1.2395, still a way from a three-year high of \$1.2536 touched last week.

Sterling, which is highly correlated to risk-on sentiment, briefly fell below the \$1.40 line for the first time in a week before climbing back above the level and last trading at \$1.414.

The Japanese yen strengthened 0.11 percent versus the greenback at 108.86 per dollar.

On Tuesday night, U.S. President Donald Trump will give his State of the Union address. Trump said on Monday he will address his proposed immigration overhaul in his speech as well as his efforts to lower trade barriers around the world for American exports.

BMO's Anderson said he did not expect the speech to be market moving.

Treasury Secretary Steven Mnuchin gave U.S. currency bears a major boost last week with a tacit endorsement of a weak dollar. Trump later tried to row back from those comments, saying he ultimately wants the dollar to be strong.

Bitcoin slipped on Tuesday to a new one-week low on Bitstamp Exchange, and was last down 10.19 percent at \$10,025.64. [\(Source Reuters, Research – @her1en\)](#)

Precious Metal – Daily Outlook**Gold off highs as market braces for Trump speech, Fed meeting - Reuters News**

Gold slipped back to a one-week low on Tuesday as markets braced for U.S. President Donald Trump's annual State of the Union address and news on U.S. monetary policy.

The speech and policy news will come amid positive consumer data and continuing fallout from a Republican memo alleging anti-Trump bias.

"A lot of this is repositioning for the State of the Union coming on tonight," said Josh Graves, senior commodities strategist at RJO Futures.

"And the talk of this memo that has damaging information in it has the market a little spooked."

Spot gold was down 0.22 percent at \$1,336.99 an ounce by 1:49 p.m. EST (1849 GMT), earlier touching a one-week low of \$1,334.10.

U.S. gold futures for February delivery settled down \$4.90, or 0.4 percent, at \$1,335.40 per ounce.

Markets are also bracing for potentially hawkish language from the U.S. Federal Reserve, which ends its two-day policy meeting on Wednesday amid signs that U.S. economic growth is picking up steam.

"On Friday U.S. jobs data should confirm the strong picture for the U.S. economy, which speaks in favor of rate rises and a strong dollar, so in the short term gold is under pressure," said Mitsubishi analyst Jonathan Butler.

He added, however, that the dollar is still "very much in a long-term downtrend."

Investors will be closely watching Trump's annual State of the Union speech for comments on the dollar.

U.S. Treasury Secretary Steven Mnuchin gave dollar bears a boost last week with a tacit endorsement of a weak U.S. currency, though Trump later tried to row back from those comments.

Gold hovered near its one-week low despite world equity markets taking their biggest two-day dive in six months, while the dollar index slipped back after climbing overnight.

Rising bond yields and a sell-off in healthcare shares sent the U.S. stock market sliding, with the Dow Jones Industrial Average's 352-point tumble its steepest in eight months.

Higher bond yields make gold a less attractive investment because it pays no interest.

In other precious metals, silver dropped 0.3 percent at \$17.11 an ounce after touching a six-day low.

Palladium was down 3.1 percent at \$1,052.20 an ounce after hitting a five-week low at \$1,047.00. Platinum was down 0.9 percent at \$995 an ounce after touching \$987.49, a one-week low.

A surge in platinum prices this month has helped the metal used in autocatalysts to break above a downward trendline in place since early 2013. [\(Source Reuters, Research – @her1en\)](#)

OIL – Daily Outlook

Oil falls a second day on stock market sell-off, U.S. output - Reuters News

Oil prices slid for a second day on Tuesday, driven by ongoing evidence of rising U.S. crude output, while wary investors sold off stocks, bonds and commodities.

Brent crude futures for March delivery settled down 44 cents, or 0.6 percent, at \$69.02 a barrel after touching a session low of \$68.40.

U.S. West Texas Intermediate futures fell \$1.06, or 1.6 percent, to close at \$64.50 a barrel.

"I'm inclined to see this as a pause on the upside. Technical fundamentals right now are saying wait for more information and move to a more neutral stance and wait and see what happens here," said

Brian LaRose, technical analyst at United-ICAP

U.S. blue-chip stocks opened under pressure, weighed down by a jump in government bond yields and an earlier rise in the dollar.

U.S. stocks fell for a second straight day, with the Dow Jones Industrial Average tumbling as much as 352 points, the steepest intraday point drop since May 17, hammered by a rise in bond yields and a decline in healthcare companies.

"There are some concerns that when you get a pull-back in the stock market it may be killing the bullish argument that the economy is strong," said Phil Flynn, analyst at Price Futures Group in Chicago.

With oil's negative correlation to the dollar reaching its strongest in a month, even continued signs of robust demand for crude were not enough to ward off profit taking following last week's rise to three-year highs.

Oil's inverse relationship to the dollar, whereby a stronger currency makes it more expensive for non-U.S. investors to buy dollar-denominated assets, has reasserted itself this week.

Keeping WTI prices under pressure were expectations that U.S. crude inventories last week rose for the first time in 11 weeks, according to a preliminary poll by Reuters on Monday.

Industry group the American Petroleum Institute will issue its data on stocks on at 4:30 p.m. EST, followed by official figures from the U.S. Energy Department on Wednesday morning.

U.S. production is already on par with that of Saudi Arabia, the biggest producer in the Organization of the Petroleum Exporting Countries (OPEC). Only Russia produces more, averaging 10.98 million barrels per day (bpd) in 2017. [\(Source Reuters, Research – @her1en\)](#)
